Democratic Dilemmas of Teaching Service-Learning Christine M. Cress,David M. Donahue,2023-07-03 A college student wants to lead a campaign to ban a young adult novel from his child's elementary school as his service-learning project in a children's literature course. Believing the book is offensive to religious sensibilities, he sees his campaign as a service to children and the community. Viewing such a ban as limiting freedom of speech and access to information, the student's professor questions whether leading a ban qualifies as a service project. If the goal of service is to promote more vital democratic communities, what should the student do? What should the professor do? How do they untangle competing democratic values? How do they make a decision about action?This book addresses the teaching dilemmas, such as the above, that instructors and students encounter in service-learning courses.Recognizing that teaching, in general, and service-learning, in particular, are inherently political, this book faces up to the resulting predicaments that inevitably arise in the classroom. By framing them as a vital and productive part of the process of teaching and learning for political engagement, this book offers the reader new ways to think about and address seemingly intractable ideological issues.Faculty encounter many challenges when teaching service learning courses. These may arise from students' resistance to the idea of serving; their lack of responsibility, wasting clients' and community agencies' time and money; the misalignment of community partner expectations with academic goals; or faculty uncertainty about when to guide students' experiences and when direct intervention is necessary.In over twenty chapters of case studies, faculty scholars from disciplines as varied as computer science, engineering, English, history, and sociology take readers on their and their students' intellectual journeys, sharing their messy, unpredictable and often inspiring accounts of democratic tensions and trials inherent in teaching service-learning. Using real incidents — and describing the resources and classroom activities they employ — they explore the democratic intersections of various political beliefs along with race/ethnicity, class, gender, ability, sexual orientation, and other lived differences and likenesses that students and faculty experience in their service-learning classroom and extended community. They share their struggles of how to communicate and interact across the divide of viewpoints and experiences within an egalitarian and inclusive environment all the while managing interpersonal tensions and conflicts among diverse people in complex, value-laden situations. The experienced contributors to this book offer pedagogical strategies for constructing service-learning courses, and non-prescriptive approaches to dilemmas for which there can be no definitive solutions.

Deep Learning Systems Andres Rodriguez,2022-05-31 This book describes deep learning systems: the algorithms, compilers, and processor components to efficiently train and deploy deep learning models for commercial applications. The exponential growth in computational power is slowing at a time when the amount of compute consumed by state-of-the-art deep learning (DL) workloads is rapidly growing. Model size, serving latency, and power constraints are a significant challenge in the deployment of DL models for many applications. Therefore, it is imperative to codesign algorithms, compilers, and hardware to accelerate advances in this field with holistic system-level and algorithm solutions that improve performance, power, and efficiency. Advancing DL systems generally involves three types of engineers: (1) data scientists that utilize and develop DL algorithms in partnership with domain experts, such as medical, economic, or climate scientists; (2) hardware designers that develop specialized hardware to accelerate the components in the DL models; and (3) performance and compiler engineers that optimize software to run more efficiently on a given hardware. Hardware engineers should be aware of the characteristics and components of production and academic models likely to be adopted by industry to guide design decisions impacting future hardware. Data scientists should be aware of deployment platform constraints when designing models. Performance engineers should support optimizations across diverse models, libraries, and hardware targets. The purpose of this book is to provide a solid understanding of (1) the design, training, and applications of DL algorithms in industry; (2) the compiler techniques to map deep learning code to hardware targets; and (3) the critical hardware features that accelerate DL systems. This book aims to facilitate co-innovation for the advancement of DL systems. It is written for engineers working in one or more of these areas who seek to understand the entire system stack in order to better collaborate with engineers working in other parts of the system stack. The book details advancements and adoption of DL models in industry, explains the training and deployment process, describes the essential hardware architectural features needed for today's and future models, and details advances in DL compilers to efficiently execute algorithms across various hardware targets. Unique in this book is the holistic exposition of the entire DL system stack, the emphasis on commercial applications, and the practical techniques to design models and accelerate their performance. The author is fortunate to work with hardware, software, data scientist, and research teams across many high-technology companies with hyperscale data centers. These companies employ many of the examples and methods provided

throughout the book.
