Biohacked Brandon J. Weichert, 2023-05-16 When COVID-19 erupted from Wuhan, China under mysterious circumstances, the Communist Party of China covered up its existence for as long as possible. It is now apparent that there is more to COVID than what the authorities wish for us to know. *Biohacked: China's Race to Control Life* details the decades-long pursuit by the Chinese Communists to dominate the biotechnology industry—to control the very building blocks of life on Earth—to further their political control at home and their supremacy abroad. More appalling than the egregious cover-up that China's rulers engaged in with COVID-19 is the fact that Western scientists, pharmaceutical companies, and research labs have contributed to China's rapid (and dangerous) growth in the biotech industry—so much so that China, not the United States, may become the seat of the biotechnology industry. The Chinese leadership believes that biotechnology is a critical industry for the Communist Party to achieve its “China Dream” of becoming the world's dominant superpower by 2049. In China's biotech sector, truly macabre practices are being developed, from ambitious cloning programs to the creation of potential pathogens that China's military plans to use in “specific genetic attacks” against Beijing's growing list of political enemies. To stop the threat, author Brandon J. Weichert proposes the world's nations create a comprehensive set of treaties for regulating biotechnology research and development. Further, Weichert calls for Washington to slow the transfer of advanced biotechnology knowledge and funding from the United States to China using means like the Foreign Corrupt Practices Act and the Committee on Foreign Investment in the United States (CFIUS). Unless an all-of-government (and society) approach is taken to curbing irresponsible biotech development in China, then another—deadlier—COVID-19-like pandemic could be at hand.

A Disaster of Our Own Making Brandon J Weichert, 2024-10-22 In 1991, the Cold War ended in a bloodless victory for NATO. After 70 years of a grueling, nuclear-tinged Cold War, communism was dead, Eastern Europe was free, Russia looked to the West for how to build a better, freer future for itself, and liberal democracy and capitalism reigned supreme. But in the ruins of the last war lies the seeds for the next great conflict. Floating just beneath the surface of post-Cold War international relations was the question of what was to become of NATO with the loss of the Soviet Union as a threat? Western leaders believed expansion into the former Soviet states of Eastern Europe was the natural next step. But the Russians opposed this. For 30 years, a succession of Russian leaders—from Mikhail Gorbachev to Boris Yeltsin to Vladimir Putin—warned the West that NATO's expansion into territories bordering Russia, notably into Ukraine, would trigger a violent response from Moscow. Yet, the West did not listen. Contrary to the popular narrative in the West, *A Disaster of Our Own Making: How the West Lost Ukraine* will show readers how Westerners created the crisis with Russia and why now innocent Ukrainians are being made to pay with their lives for the arrogance (and ignorance) of Western leaders in the post-Cold War era. Thanks to that hubris, today, the world teeters on the brink of a potential nuclear world war over the status of Ukraine.

Direct Methods for Limit State of Materials and Structures Giovanni Garcea, Dieter Weichert, 2023-08-23 This book provides an overview of direct methods, such as limit and shakedown analysis, which are intended for avoiding cumbersome step-by-step calculations to determine the limit states of mechanical structures under monotone, cyclic or variable actions with unknown loading history. The book comprises several contributions that demonstrate how tremendous advances in numerical methods, especially in optimization, have contributed to the success of direct methods and their applicability to practical engineering problems in structural mechanics and mechanics of materials. The contents reflect the outcomes of the workshop “Direct Methods for Limit State of Materials and Structures,” held in Cosenza, Italy in June 2022.

Nonlinear Continuum Mechanics of Solids Yavuz Basar, Dieter Weichert, 2013-11-11 The aim of the book is the presentation of the fundamental mathematical and physical concepts of continuum mechanics of solids in a unified description so as to bring young researchers rapidly close to their

research area. Accordingly, emphasis is given to concepts of permanent interest, and details of minor importance are omitted. The formulation is achieved systematically in absolute tensor notation, which is almost exclusively used in modern literature. This mathematical tool is presented such that study of the book is possible without permanent reference to other works.

Direct Methods for Limit States in Structures and Materials Konstantinos

Spiliopoulos, Dieter Weichert, 2013-08-13 Knowing the safety factor for limit states such as plastic collapse, low cycle fatigue or ratcheting is always a major design consideration for civil and mechanical engineering structures that are subjected to loads. Direct methods of limit or shakedown analysis that proceed to directly find the limit states offer a better alternative than exact time-stepping calculations as, on one hand, an exact loading history is scarcely known, and on the other they are much less time-consuming. This book presents the state of the art on various topics concerning these methods, such as theoretical advances in limit and shakedown analysis, the development of relevant algorithms and computational procedures, sophisticated modeling of inelastic material behavior like hardening, non-associated flow rules, material damage and fatigue, contact and friction, homogenization and composites.

Inelastic Behaviour of Structures under Variable Repeated Loads Dieter Weichert, Giulio

Maier, 2014-05-04 This book deals with the safety assessment of structures and structural components, possibly operating beyond the elastic limits under variable repeated thermo-mechanical loads. Examples of such situations can be found both in mechanical and civil engineering (e.g. transportation technologies, pressure vessels, pipelines, offshore platforms, dams, pavements and buildings in seismic zones). So-called direct" methods are focused, based on the shakedown theorems and their specialisation to limit theorems. These methods are receiving increased attention for the prediction of structural failure because they provide the information that is essential in practice (e.g. safety factor and collapse mechanisms) by more economical procedures than step-by-step inelastic analysis; also, they only need a minimum of information on the evolution of loads as functions of time. The addressed audience are primarily engineers and scientists active in Structural Engineering and Safety and Reliability Analysis.

Limit States of Materials and Structures Dieter Weichert, Alan Ponter, 2009-02-22 To predict loading limits for structures and structural elements is one of the oldest and most important tasks of engineers. Among the theoretical and numerical methods available for this purpose, so-called "Direct Methods", - bracing Limit- and Shakedown Analysis, play an eminent role due to the fact that they allow rapid access to the requested information in mathematically constructive manners. The collection of papers in this book is the outcome of a workshop held at Aachen University of Technology in November 2007. The individual contributions stem in particular from the areas of new numerical developments rendering the methods more attractive for industrial design, extensions of the general methodology to new horizons of application, probabilistic approaches and concrete technological applications. The papers are arranged according to the order of the presentations in the workshop and give an excellent insight into state-of-the-art developments in this broad and growing field of research. The editors warmly thank all the scientists, who have contributed by their outstanding papers to the quality of this edition. Special thanks go to Jaan Simon for his great help in putting together the manuscript to its final shape.

Inelastic Analysis of Structures under Variable Loads Dieter Weichert, Giulio

Maier, 2012-12-06 The question whether a structure or a machine component can carry the applied loads, and with which margin of safety, or whether it will become unserviceable due to collapse or excessive inelastic deformations, has always been a major concern for civil and mechanical engineers. The development of methods to answer this technologically crucial question without analysing the evolution of the system under varying loads, has a long tradition that can be traced back even to the times of emerging mechanical sciences in the early 17th century. However, the scientific foundations of the theories underlying these methods, nowadays frequently called direct,

were established sporadically in the Thirties of the 20th century and systematically and rigorously in the Fifties. Further motivations for the development of direct analysis techniques in applied mechanics of solids and structures arise from the circumstance that in many engineering situations the external actions fluctuate according to time histories not a priori known except for some essential features, e.g. variation intervals. In such situations the critical events (or limit states) to consider, besides plastic collapse, are incremental collapse (or ratchetting) and alternating plastic yielding, namely lack of shakedown. Non evolutionary, direct methods for ultimate limit state analysis of structures subjected to variably-repeated external actions are the objectives of most papers collected in this book, which also contains a few contributions on related topics.

Educating the Engineer for the 21st Century D. Weichert, B. Rauhut, R. Schmidt, 2007-05-08
Upspeeding technological evolution and globalisation characterise today's and future lives of engineers. It is vital for all institutions involved in engineering education to keep pace and to anticipate future needs. The herein presented collection of papers results from the Workshop on Global Engineering Education (GEE'3) which took place at Aachen University of Technology, 18 - 20 October 2000. In this meeting more than 150 specialists from 25 countries discussed the topic "Educating the Engineer for the Century". Which role to attribute to non-technical qualifications? How to integrate ethical aspects in education? Do we have to define international standards in education? What about quality control? What is the potential of new media for knowledge transfer? How to organise lifelong learning for engineers? - These are some of the questions discussed among representatives of industries, educational institutions, politicians and individuals during this meeting. According to the sessions of the workshop, the book is subdivided into chapters covering the areas "Role of the Global Engineer in Meeting the Challenges of Society in the Century", "Internationality and Interdisciplinarity", "Engineering Education in Emerging Economies", "European Bachelor and Master Programmes", "Developing Personal Skills to be a Global Engineer". Three chapters deal with successful practice in engineering education covering the topics "Programmes, Curricula and Evaluation", "Educational Concepts", and "University-Industry Partnership, Design Projects".

Winning Space Brandon J. Weichert, 2020-09-15
When President Donald J. Trump announced the creation of America's sixth branch of the military, the United States Space Force, many in Washington scoffed. But, U.S. rivals in China, Russia, Iran, and North Korea took notice. Since the end of the Cold War, these American foes have chafed under the full-spectrum dominance that the American superpower has enjoyed globally. They have identified space as a key strategic domain where they can challenge--and possibly defeat--the United States military. And, depriving the U.S. military and/or its economy of access to space during an international crisis could spell doom for the United States in other strategic domains (land, sea, air, and cyberspace). After all, space is critical for America's vaunted information dominance. Satellites overhead are the backbone of America's global military. Remove them from orbit and U.S. forces worldwide are rendered deaf, dumb, and blind. What's more, space is a more than \$1 trillion economy just waiting to be developed. Whichever country gets there first will have considerable economic and geopolitical power on Earth. Despite President Trump's creation of the Space Force, Swamp Dwellers in Washington continue resisting his reforms to U.S. space and technology policy. *Winning Space* tracks the increasing competition the United States is facing in the technology sector and depicts how the United States has been engaged in a Second Space Race--and how it has been losing. Author Brandon Weichert warns how the United States is at risk for a Pearl Harbor-type event in space. Weichert advocates for the full embrace of Trump's reforms for America's flailing space policy, while also calling for a minimum \$1 trillion investment in advanced research and development here in the United States, to stay ahead of America's advancing foes. Contrary to what many Americans may think, the United States has been declining in space and the high-technology development sector. Should it lose its dominance in these areas, it will surely lose its superpower status. The next decade presents U.S. policymakers one last chance to preserve the superpower status that America fought two world wars and the Cold War to build. Time is not on our side. We are on notice, but we have not noticed.

Direct Methods Aurora Angela Pisano, Konstantinos Vassilios Spiliopoulos, Dieter Weichert, 2020-07-16 This book provides an overview of direct methods such as limit and shakedown analysis, which are intended to do away with the need for cumbersome step-by-step calculations and determine the loading limits of mechanical structures under monotone, cyclic or variable loading with unknown loading history. The respective contributions demonstrate how tremendous advances in numerical methods, especially in optimization, have contributed to the success of direct methods and their practical applicability to engineering problems in structural mechanics, pavement and general soil mechanics, as well as the design of composite materials. The content reflects the outcomes of the workshop "Direct Methods: Methodological Progress and Engineering Applications," which was offered as a mini-symposium of PCM-CMM 2019, held in Cracow, Poland in September 2019.

Where are the people? People's Theater in Inter-Asian Societies Ratu Selvi Agnesia, Glecy Cruz ATIENZA, AU Sow Yee, BAEK Dae-hyun, Richard BARBER, Assane Alberto CASSIMO, CHUNG Chiao, Dindon W.S., Muhammad FEBRIANSYAH, HAN Jia-ling, HONG Seung-yi, Hsiao-Chuan HSIA, KUO Liang-ting, LEE Show Shin, LIU Hsin-hung, Adaw Palaf LANGASAN, WANG Chu-yu, WANG Mo-lin, Robin WEICHERT, WU Sih-Fong, ZHAO Chuana, Where Are the People? How Could the People's Bodies Voice Themselves in the Form of Theatrical Aesthetics? At That Time, the Audience Really Stood Up. In this evening, theater practitioners initiated the conversation with physical action. They engage with contemporary issues through their unique performance styles. From a discursive context, they enter the scene of resistance and undertake the labor of performance. Their performance is not just the preface to a series of dialogues, but also a witness to thirty years of People's Theater. "People's theater" belongs to the people. It is the theater created by the people and speaks for the people as it has appeared in history in diverse forms. People theater in Inter-Asian Societies began to grow in a cross-region, which included Jakarta, Manila, Bangkok, Kuala Lumpur, Hong Kong, Tokyo, Busan, Maputo, Beijing, Shanghai, Hualien, Taichung, and Taipei. Through the writings and images written down by theatrical artists from these spaces, we can figure out the body aesthetics that carry historical conflicts and the experience to find the form and channel of expression, and continue for work of thinking and creation. "People Theater" is nothing but a rehearsal for a revolution. This book has reviewed and reflected on the half-century development of people's theater in inter-Asian societies, demonstrates how the theatrical practitioners and artists in different communities strived to open various spaces, dealt with the censorship from the authoritarian regime to the neoliberal societies, and experimented with diverse aesthetics and local objects to address political issues. ■ Preface "It is a collection with the premise that can motivate our critical thinking with bodily energy. It reflects how we realize the statement—'Viewing as participating; audience as actors.' It is also a book where some keywords constantly appear, like resistance, politics, the oppressed, and conversation. With its humming buzz and murmur against the present situation, it is a collection of words refusing to remain silent."— Lin Hsin I ■ Associate Professor at the Institute of Applied Art, National Yang Ming Chiao Tung University ■ People's Theater Practitioners Asian People's Theatre Festival Society (Hong Kong) ■ Assignment Theatre (Taiwan) ■ Centre for Applied Theatre, Taiwan (Taipei) ■ Grass Stage (Shanghai) ■ Langasan Theatre (Hualien) ■ Makhampom Theatre Group (Ching Dao/Bangkok) ■ Oz Theatre Company (Taipei) ■ Philippine Educational Theater Association, PETA (Manila) ■ Shigang Mama Theater (Taichung Shigang) ■ Teater Kubur (Jakarta) ■ Teatro em Casa (Mozambique) ■ Theater Playground SHIIM (Busan) ■ Trans-Asia Sisters Theater (Taiwan) ■ WANG Mo-lin (Taiwan) ■ Wiji Thukul (Solo) ■ Yasen no Tsuki (Tokyo) ■ Characteristics of this book 1. Beyond the geographical limitations of Taiwan and East Asia, combined the context of Inter-Asian societies and Third-World society, appreciate the theater work

methods that are intertwined with folk culture and community traditions, and promote the practice of public theater. 2. This book focuses on depicting network relationships in specific historical periods, and explores how the cooperation and interaction of troupes in these heterogeneous regions occurred. And how do these interactions affect the characteristics and forms of popular theater organizations in the transition of different policies? 3. What this book looks back on is not only the continuation and development of troupes but also the sudden change or gap between new people theaters and old people theaters.

Transforming Business Education for a Sustainable Future Linda Irwin, Isabel Rimanoczy, Morgane Fritz, James Weichert, 2023-12-22 As the impact of climate change becomes more evident and dire, business leaders, educators, students, and academic leaders are deciding what they need to change and do to survive and thrive in a new and dramatically different environment. This book sets out how to transform business education and integrate sustainability practices into curriculum and a wider academic culture. While some universities around the globe are still teaching business practices that have contributed to human and environmental crises, pioneering educators and higher education institutions are researching, developing, and implementing programs to transform business education and practices. With stories from 26 administrators, researchers, and faculty across the globe, this book inspires business educators with innovative tools and creative solutions to address challenges in the business world and society. These pioneers are helping students and business ventures change the way they conduct business to survive and thrive in a fast-changing global environment. Their unique and personal journeys offer tools, models, lessons-learned, and inspiration for change. The book will both inspire and guide faculty members, administrators, students, and alumni to transform business education for a sustainable future.

Direct Methods for Limit and Shakedown Analysis of Structures Paolo Fuschi, Aurora Angela Pisano, Dieter Weichert, 2015-01-06 Articles in this book examine various materials and how to determine directly the limit state of a structure, in the sense of limit analysis and shakedown analysis. Apart from classical applications in mechanical and civil engineering contexts, the book reports on the emerging field of material design beyond the elastic limit, which has further industrial design and technological applications. Readers will discover that "Direct Methods" and the techniques presented here can in fact be used to numerically estimate the strength of structured materials such as composites or nano-materials, which represent fruitful fields of future applications. Leading researchers outline the latest computational tools and optimization techniques and explore the possibility of obtaining information on the limit state of a structure whose post-elastic loading path and constitutive behavior are not well defined or well known. Readers will discover how Direct Methods allow rapid and direct access to requested information in mathematically constructive manners without cumbersome step-by-step computation. Both researchers already interested or involved in the field and practical engineers who want to have a panorama of modern methods for structural safety assessment will find this book valuable. It provides the reader with the latest developments and a significant amount of references on the topic.
