Protides of the Biological Fluids H. Peeters, 2013-10-22 Protides of the Biological Fluids presents the functional approach to conformation that combines the physiological significance with physical and chemical appearance of the protein. This book discusses the technical details of purification, determination, or identification of given protein fractions. Organized into three sections, this book begins with an overview of the intramolecular cross-linked synthetic polypeptides that can be used as models for the organized spatial structure of proteins. This text then examines the polarization of fluorescence methods, which provide very sensitive hydrodynamic techniques for studying the internal organization and the rigidity of the polypeptide. Other sections consider the excretion of different classes of immunoglobulins in the external secretions of dogs. This book discusses as well the anti-coli antibody and the poliovirus neutralizing antibody activity of achlorhydric gastric juices. The final section deals with the introduction of gels as a medium for the electrophoresis of proteins. This book is a valuable resource for chemists, biochemists, and geneticists.

**Backpropagation** Yves Chauvin, David E. Rumelhart, 2013-02-01 Composed of three sections, this book presents the most popular training algorithm for neural networks: backpropagation. The first section presents the theory and principles behind backpropagation as seen from different perspectives such as statistics, machine learning, and dynamical systems. The second presents a number of network architectures that may be designed to match the general concepts of Parallel Distributed Processing with backpropagation learning. Finally, the third section shows how these principles can be applied to a number of different fields related to the cognitive sciences, including control, speech recognition, robotics, image processing, and cognitive psychology. The volume is designed to provide both a solid theoretical foundation and a set of examples that show the versatility of the concepts. Useful to experts in the field, it should also be most helpful to students seeking to understand the basic principles of connectionist learning and to engineers wanting to add neural networks in general -- and backpropagation in particular -- to their set of problem-solving methods.

**Reservoir Engineering Techniques Using Fortran** Mihir K. Sinha, Larry R. Padgett, 2012-12-06 Practical reservoir engineering techniques have been adequately described in various publications and textbooks, and virtually all useful techniques are suit able for implementation on a digital computer. Computer programs have been written for many of these techniques, but the source programs are usually not available in published form. The purpose of this book is to provide a central source of FORTRAN-coded algorithms for a wide range of conventional reservoir engineering techniques. The book may be used as a supplementary text for courses in practical reservoir engineering. However, the book is primarily intended for practicing reservoir engineers in the hope that the collection of programs provided will greatly facilitate their work. In addition, the book should be also helpful for non-petroleum engineers who are involved in applying the results of reservoir engineering analysis. Sufficient information is provided about each of the techniques to allow the book to be used as a handy reference. ix INTRODUCTION This book provides many of the useful practical reservoir engineering (conventional) techniques used today in the form of FORTRAN codes. The primary objectives have been to provide the simplest possible method for obtaining reliable answers to practical problems. Unfortunately, these codes can usually be applied by simply following a cookbook approach. However, if at all possible, the solutions obtained should be verified and cross-checked by some other means and, most important, should be checked for reasonability.

*Boundary Element Analysis of Nonhomogeneous Biharmonic Phenomena* Charles V.

Camp, G. Steven Gipson, 2013-04-17 At the date of this writing, there is no question that the boundary element method has emerged as one of the major revolutions on the engineering science of computational mechanics. The emergence of the technique from relative obscurity to a cutting edge engineering analysis tool in the short space of basically a ten to fifteen year time span is unparalleled since the advent of the finite element method. At the recent international conference BEM XI, well over one hundred papers were presented and many were published in three hard-bound volumes. The exponential increase in interest in the subject is comparable to that shown in the early days of finite elements. The diversity of applications of BEM, the broad base of interested parties, and the ever-increasing presence of the computer as an engineering tool are probably the reasons for the upsurge in popularity of BEM among researchers and industrial practitioners. Only in the past few years has the BEM audience become large enough that we have seen the development of specialty books on specific applications of the boundary element method. The present text is one such book. In this work, we have attempted to present a self-contained treatment of the analysis of physical phenomena governed by equations containing biharmonic operators. The biharmonic operator defines a very important class of fourth-order PDE problems which includes deflections of beams and thin plates, and creeping flow of viscous fluids.

Arsenic Pollution Control in Nonferrous Metallurgy Li-Yuan Chai, 2019-03-13 The control of arsenic pollution has attracted worldwide attention, as it is one of the top 20 hazardous substances, and greatly threatens the human health, ecological balance, and industrial development. Arsenic pollution results from natural enrichment and anthropological activities, especially mining and smelting operations. This book introduces arsenic pollution control technologies for aqueous solution and solid wastes produced by the utilization of arsenic-containing materials. It systematically discusses the principles and technologies of arsenic pollution control based on the author's 16 years of research on arsenic, to help readers gain an understanding of various aspects of arsenic pollution control, including the pollution source distribution of arsenic in typical smelters, arsenic behaviors and pollution control technologies in aqueous solution and solid waste, and clean utilization of arsenic-containing materials.

**Belt Basin: Window to Mesoproterozoic Earth** John S. MacLean, James W. Sears, 2016-06-01

With its thickness of more than 15 km of strata, covering some 200,000 km<sup>2</sup>, the Belt basin displays one of the planet's largest, best-exposed, most accessible, and best-preserved sequences of Mesoproterozoic sedimentary and igneous rocks. This volume focuses on research into this world-class province; kindles ideas about this critical era of Earth evolution; and covers aspects of the basin from its paleontology, mineralogy, sedimentology, and stratigraphy to its magmatism, ore deposits, geophysics, and structural geology.

*Statistical Design and Analysis for Intercropping Experiments* Walter T. Federer, 2008-01-08

Intercropping is an area of research for which there is a desperate need, both in developing countries where people are rapidly depleting scarce resources and still starving, and in developed countries, where more ecologically and economically sound ways of feeding ourselves must be developed. The only published guidelines for conducting such research and analyzing the data have been scattered about in various journal articles, many of which are hard to find. This book condenses these methods and will be immensely valuable to agricultural researchers and to the statisticians who help them design their experiments and interpret their results.

Casualty Returns 1942 Lloyd's Register Foundation, 1942-01-01 The Casualty Returns refer to the total losses of ocean going merchant ships over 100 gross tonnes. The Returns were published quarterly and annually, recording losses according to flag and cause of loss. Early Quarterly Returns give figures for steam and sailing vessels by flag and cause of loss, and for total tonnage owned in each country.
