*The Dose Makes the Poison* Patricia Frank,M. Alice Ottoboni,2011-03-22 This new edition of a widely-read and highly-acclaimed book broadens the scope of its predecessors from a heavy focus on industrial chemicals as toxicants to include drugs, food additives, cosmetics and other types of compounds that people are exposed to daily. Also new to the 3rd edition are newer issues-of-the-day such as nanoparticulate toxicants, second hand smoke, food contamination, lead in toys, and others. As such, the book provides the basics of toxicology in easy-to-understand language as well as a fuller understanding of the daily insults to which our bodies are subjected.

Effects of Low Dose and Low Dose Rate Radiation Oddvar F. Nygaard,Warren K. Sinclair,John T. Lett,2013-10-22 *Advances in Radiation Biology, Volume 6: Effects of Low Dose and Low Dose Rate Radiation* examines the biological effects of low dose and low dose rate ionizing radiation on a broad scale, covering various articles from microdosimetry to analyses of human responses. Estimates of the effects on humans from low doses or from sustained exposures to low dose rates of ionizing radiations are of critical importance for the assessment of radiation risks under occupational and environmental conditions. This book consists of such knowledge that is essential for radiation protection and governmental regulatory activities pertaining to radiation exposure. This volume is intended for radiobiologists, radiation epidemiologists, radiation physicists, radiation safety personnel, health officials, and individuals involved in regulatory activities.

Low dose medicine Max Corradi,2014-02-03 Low dose medicine is a new therapeutic approach aimed at restoring physiology through communicating and signaling molecules such as cytokines, interleukins, growth factors, neuropeptides, neurotransmitters and hormones prepared in low dose-active homeopathic dilutions and therefore without any side-effects. Part one of the book covers in details each signaling molecule and its therapeutic application in low dose medicine, whereas part two offers a list of general treatment protocols for a variety of health conditions. The aim of this book is be at the same time a manual and also a compendium to my other books in describing possible different ways to restore a healthy condition without any side effects.

Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life

Studies, Board on Environmental Studies and Toxicology, Committee on Endocrine-Related Low-Dose Toxicity, 2017-07-14 To safeguard public health, the US Environmental Protection Agency (EPA) must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision-making. For decades the agency has dealt with questions about what animal-testing data to use to make predictions about human health hazards, how to perform dose-response extrapolations, how to identify and protect susceptible subpopulations, and how to address uncertainties. As alternatives to traditional toxicity testing have emerged, the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods. Endocrine active chemicals (EACs) have raised concerns that traditional toxicity-testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function, and small alterations in hormone concentrations, particularly during sensitive life stages, can have lasting and significant effects. To address concerns about potential human health effects from EACs at low doses, this report develops a strategy to evaluate the evidence for such low-dose effects.

*The Physician's Dose and Symptom Book* Joseph Wythes, 2023-12-31 Reprint of the original, first published in 1874.

**It All Depends on the Dose** Ole Peter Grell, Andrew Cunningham, Jon Arrizabalaga, 2018-05-11 This is the first volume to take a broad historical sweep of the close relation between medicines and poisons in the Western tradition, and their interconnectedness. They are like two ends of a spectrum, for the same natural material can be medicine or poison, depending on the dose, and poisons can be transformed into medicines, while medicines can turn out to be poisons. The book looks at important moments in the history of the relationship between poisons and medicines in European history, from Roman times, with the Greek physician Galen, through the Renaissance and the maverick physician Paracelsus, to the present, when poisons are actively being turned into beneficial medicines. Chapter 5 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

**A Review of the Dose Reconstruction Program of the Defense Threat Reduction Agency** National Research Council, Division on Earth and Life Studies, Board on Radiation Effects Research, Committee to Review the Dose Reconstruction Program of the Defense Threat Reduction Agency, 2003-09-21 From 1945 through 1962, the US atmospheric nuclear weapons testing program involved hundreds of thousands of military and civilian personnel, and some of them were exposed to ionizing radiation. Veterans' groups have since been concerned that their members' health was affected by radiation exposure associated with participation in nuclear tests and have pressured Congress for disability compensation. Several pieces of legislation have been passed to compensate both military and civilian personnel for such health effects. Veterans' concerns about the accuracy of reconstructed doses prompted Congress to have the General Accounting Office (GAO) review the dose reconstruction program used to estimate exposure. The GAO study concluded that dose reconstruction is a valid method of estimating radiation dose and could be used as the basis of compensation. It also recommended an independent review of the dose

reconstruction program. The result of that recommendation was a congressional mandate that the Defense Threat Reduction Agency (DTRA), a part of the Department of Defense, ask the National Research Council to conduct an independent review of the dose reconstruction program. In response to that request, the National Research Council established the Committee to Review the Dose Reconstruction Program of the Defense Threat Reduction Agency in the Board on Radiation Effects Research (BRER). The committee randomly selected sample records of doses that had been reconstructed by DTRA and carefully evaluated them. The committee's report describes its findings and provides responses to many of the questions that have been raised by the veterans.

**The Lethal Dose** Jennifer Daniels, 2016-02-04 This is a riveting book for anyone who wants to know how safe their medical care really is. If you have been harmed or unimproved by medical therapies, you will be enlightened and relieved by the straightforward answers in this book. Dr Daniels clearly explains how Board Certified Doctors who are following the Standard of Care, Murdered 759,766 patients in the United States in 2011. She reveals her observation of medical harm during her years of medical education, Family Practice Residency Training and Community Medicine practice. Dr Daniels' refusal to participate in the murder of patients was the basis of her evolving interest in Alternative Therapies. Dr Daniels' triumph in embracing the concept of Holistic Health led her to focus on reducing drug violence as part of improving the health of the community where her medical practice was located. This is a real eye opener. Her medical practice was jeopardized when she foiled a 30million dollar bank heist. You will have to read the book to get the rest of that story

**A Small Dose of Toxicology** Steven G. Gilbert, 2004-02-18 Everyday, we come into contact with many relatively harmless substances that could, at certain concentrations, be toxic. This applies not only to obvious candidates such as asbestos, lead, and gasoline, but also to compounds such as caffeine and headache tablets. While the field of toxicology has numerous texts devoted to aspects of biology, chemis

**Deadly Dose** Amanda Lamb, 2008-06-03 The crime was unforgivable. The suspected murderer—unbelievable. One man's pursuit of justice—unstoppable. The death of promising young pediatric AIDS researcher Eric Miller stunned the Raleigh, North Carolina, community, largely because of the horrific way he was killed. For months, Eric was slowly tortured as arsenic consumed his body. No one thought that Eric Miller's wife, Ann—an attractive, demure, educated scientist—could be capable of such a horrible crime. No one except for veteran homicide investigator Chris Morgan, a man in the twilight of his career. But from the moment Morgan saw the thirty-year-old widow in the interview room at the police department, he knew he was seeing pure evil. Now, journalist Amanda Lamb details Morgan's dogged investigation—a quest for the truth that would last four years and see another life taken before Ann Miller's tangled web of death and deceit finally came to light.

**Death by Dose** Lynn Ronsen RN, 2019-09-11 The book is about a nurse detective who works for an insurance company, Safe Trust. Her job is to work undercover to investigate events, such as wrongful deaths, malpractice, neglect, etc., which are costing the insurance company much more money than normal. Perinne Anderson, the main character, lives in Minneapolis, Minnesota. She's hired by Safe Trust to investigate deaths that are occurring in

Jacksonville, Florida. One of a group of four physicians who work at the Rathburn Clinic and Hospital is euthanizing patients for insurance money. Perinne is hired to figure out which one of the physicians is guilty. Perinne is aided in her investigations by her little dog, Baby, who does play a big part in the book. Perinne's also aided by her friend, Dr. Alvin Navarre, who is a professor of ethics at the University of Minnesota. During the course of the investigation, Perinne is run off the road by the perpetrator, gets locked out on a balcony at the clinic and is forced to repel down the outside of the building landing in a lake inhabited by an alligator, and in the end, has a stand off with the perpetrator who is holding a gun on her.

**Dose-book and Manual of Prescription-writing** Edward Quin Thornton, 1895

Radiopharmaceuticals Lawrence E. Williams, Ph.D., 2010-12-20 Nanoengineering, energized by the desire to find specific targeting agents, is leading to dramatic acceleration in novel drug design. However, in this flurry of activity, some issues may be overlooked. This is especially true in the area of determining dosage and evaluating the effects of multiple agents designed to target more than one site of metastasis. Offering the unique perspective of a medical physicist who has worked directly with cancer patients for over three decades, Radiopharmaceuticals: Introduction to Drug Evaluation and Dose Estimation starts by exploring the recent history and current state of the field. Then, citing key research and practical examples, the author looks at how to run studies and employ estimation and evaluation methods that lead to the best multiple agents with the least amount of trial and error. He discusses methods that will allow researchers to more rigorously: Differentiate one radiopharmaceutical (RP) from another Estimate radiation doses Correlate results across various species to realize more informed data from clinical trials Incorporating developments in nanotechnology and radiology, with the ultimate goal of achieving personalized patient-specific treatment, this book crosses disciplines to addresses a range of topics including: Preclinical RP development Organization of clinical trials Determination of activity in vivo Modeling and temporal integration with a look at the mass law for tumor uptake as a function of tumor size (discovered by the author) Absorbed dose estimates with and without clinical correlations Multiple-modality therapy Dr. Lawrence Williams has devoted most of his life's research to tumor detection and treatment, and his

discoveries continue to influence evolving therapies. As s a medical physicist, he is eminently qualified to bring unique insight into the discussion of radiopharmaceutical dosage rates and efficacy.

**Appropriate Dose Selection - How to Optimize Clinical Drug Development** J. Venitz,W. Sittner,2007-03-06 Optimal dose individualization has become more important in improving clinical efficacy and safety. This is due in part to the variability in drug response. Therefore, the role of optimal dose finding in early clinical drug development so as to maximize successful clinical use is emphasized. This book reviews innovative methods, tools and examples of rational drug development strategies, particularly for novel oncological agents.

**Math Vitamins** Loretta Jean Everhart,2011-08-19 For some students, the mere thought of solving a word problem can transform even the most confident among them into nervous wrecks. In her guidebook, Math Vitamins, retired educator Loretta Jean Everhart shares her methods of success that will help any student from Pre-K to fifth grade effectively solve even the most challenging word problems. Everhart taught elementary students for over thirty years and relies on her diverse experience working with students of all levels to offer useful techniques and step-by-step guidance that will lead parents and teachers through several ways to cope with math anxiety, improve math writing and vocabulary, and use cooperative learning to solve word problems. While providing simple strategies like having children work on jigsaw puzzles to learn guess and test methodologies, Everhart also shares an in-depth exploration of Polya's four-step model, which helps children first understand the problem and then develop a plan on how to answer it. For the parent of a home-schooled child or for teacher who is searching for new ideas, this innovative guidebook offers practical tips and suggestions that will help lead struggling students out of the often tricky world of word problems and onto a successful path of future problem solving.

**Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials** John O'Quigley,Alexia Iasonos,Björn Bornkamp,2017-04-27 Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials gives a thorough presentation of state-of-the-art methods for early phase clinical trials. The methodology of clinical trials has advanced greatly over the last 20 years and, arguably, nowhere greater than that of early phase studies. The need to accelerate drug development in a rapidly evolving context of targeted therapies, immunotherapy, combination treatments and complex group structures has provided the stimulus to these advances. Typically, we deal with very small samples, sequential methods that need to be efficient, while, at the same time adhering to ethical principles due to the involvement of human subjects. Statistical inference is difficult since the standard techniques of maximum likelihood do not usually apply as a result of model misspecification and parameter estimates lying on the boundary of the parameter space. Bayesian methods play an important part in overcoming these difficulties, but nonetheless, require special consideration in this particular context. The purpose of this handbook is to provide an expanded summary of the field as it stands and also, through discussion, provide insights into the thinking of leaders in the field as to the potential developments of the years ahead. With this goal in mind we present: An introduction to the field for graduate students and novices A basis for more established researchers from which to build A collection of material for an advanced course in early phase

clinical trials A comprehensive guide to available methodology for practicing statisticians on the design and analysis of dose-finding experiments An extensive guide for the multiple comparison and modeling (MCP-Mod) dose-finding approach, adaptive two-stage designs for dose finding, as well as dose-time-response models and multiple testing in the context of confirmatory dose-finding studies. John O'Quigley is a professor of mathematics and research director at the French National Institute for Health and Medical Research based at the Faculty of Mathematics, University Pierre and Marie Curie in Paris, France. He is author of Proportional Hazards Regression and has published extensively in the field of dose finding. Alexia Iasonos is an associate attending biostatistician at the Memorial Sloan Kettering Cancer Center in New York. She has over one hundred publications in the leading statistical and clinical journals on the methodology and design of early phase clinical trials. Dr. Iasonos has wide experience in the actual implementation of model based early phase trials and has given courses in scientific meetings internationally. Björn Bornkamp is a statistical methodologist at Novartis in Basel, Switzerland, researching and implementing dose-finding designs in Phase II clinical trials. He is one of the co-developers of the MCP-Mod methodology for dose finding and main author of the DoseFinding R package. He has published numerous papers on dose finding, nonlinear models and Bayesian statistics, and in 2013 won the Royal Statistical Society award for statistical excellence in the pharmaceutical industry.
