Contemporary Perspectives on Social Capital in Educational Contexts RoSusan D. Bartee,Phillis George,2019-05-01 The currency of social capital serves as an important function given the capacity to generate external access (getting to) and internal accountability (getting through) for individuals and institutions alike. Pierre Bourdieu (1986) defines social capital as "the aggregate of the actual or potential resources which are linked to possession of a durable network of more or less institutionalized relationships of mutual acquaintance and recognition or in other words, to membership in a group" (p. 251). Social capital contains embedded resources as a tool for manifesting opportunities and options among individuals and groups. Inevitably, the aforementioned opportunities and options become reflective of the depth and breadth of access and accountability experienced by the individual and institution. As educational stakeholders, we must consistently challenge ourselves with the question, "How do K-12 schools and colleges and universities accomplish shared, egalitarian goals of achieving access and accountability?" Such goals become fundamental toward ensuring students matriculating through K-12 and higher education, irrespective of background, are provided the caliber of education and schooling experience to prepare them for economic mobility and social stability. To that end, the volume, Contemporary Perspectives on Social Capital in Educational Contexts (2019), as part of the book series, Contemporary Perspectives on Capital in Educational Contexts, offers a unique opportunity to explore social capital as a currency conduit for creating external access and internal accountability for K-12 and higher education. The commonalities of social capital emerging within the 12 chapters of the volume include the following: 1) Social Capital as Human Connectedness; 2) Social Capital as Strategic Advocacy; 3) Social Capital as Intentional Engagement; and 4) Social Capital as Culturally-Responsive Leadership. Thus, it becomes important for institutions of education (i.e. secondary, postsecondary, continuing) and individuals to assume efforts with intentionality and deliberateness to promote access and accountability.

Engineering and Management of IT-based Service Systems Manuel Mora,Jorge Marx Gómez,Leonardo Garrido,Francisco Cervantes Pérez,2013-10-19 Intelligent Decision-Making Support Systems (i-DMSS) are specialized IT-based systems that support some or several phases of the individual, team, organizational or inter-organizational decision making process by deploying some or several intelligent mechanisms. This book pursues the following academic aims: (i) generate a compendium of quality theoretical and applied contributions in Intelligent Decision-Making Support Systems (i-DMSS) for engineering and management IT-based service systems (ITSS); (ii) diffuse scarce knowledge about foundations, architectures and effective and efficient methods and strategies for successfully planning, designing, building, operating, and evaluating i-DMSS for ITSS, and (iii) create an awareness of, and a bridge between ITSS and i-DMSS academicians and practitioners in the current complex and dynamic engineering and management ITSS organizational. The book presents a collection of 11 chapters referring to relevant topics for both IT service systems and i-DMSS including: problems of selection of IT service providers, optimization of supply chain systems, IT governance decisions, clinical decision support, dynamic user-interface adaptation, re-engineering of processes, and generic decision problems. Advanced IT technologies used in some chapters are: fuzzy multi-criteria mechanisms, semantic processing, data mining processing, and rough sets. Other chapters report traditional DSS mechanisms but used or suggested to be used in innovative mode for IT service engineering and management tasks.

The Future of Identity in the Information Society Kai Rannenberg,Denis Royer,André Deuker,2009-09-29 Digitising personal information is changing our ways of identifying persons and managing relations. What used to be a natural identity, is now as virtual as a user account at a web portal, an email address, or a mobile phone number. It is subject to diverse forms of identity management in business, administration, and among citizens. Core question and source of conflict is who owns how much identity information of whom and who needs to place trust into which identity information to allow access to resources. This book presents multidisciplinary answers from research, government, and industry. Research from states with different cultures on the identification of citizens and ID cards is combined towards analysis of HighTechIDs and Virtual Identities, considering privacy, mobility, profiling, forensics, and identity related crime. FIDIS has put Europe on the global map as a place for high quality identity management research. –V. Reding, Commissioner, Responsible for Information Society and Media (EU)

Automation in Mining, Mineral, and Metal Processing 1995 (MMM'95) I. J. Barker,1997 When the South African Council for Automation and Computation (SACAC) first submitted a bid to host the 8th IFAC Symposium on Automation in Mining, Mineral and Metal Processing in Beijing, many obstacles were evident. Most of these were embodied in negative international attitudes to the government of the Republic of South Africa and the apartheid society it supported. However, it is to the credit of the IFAC working group on automation in mining, mineral and metal processing that their application at that time was considered favourably, although not formally accepted. It took a visit to the 10th IFAC World Congress in Sydney and a visible shift in the political scenario to persuade the relevant IFAC committees that South Africa would be suitable for the symposium. A national organising committee was formed under the leadership of SACAC and the South African Institute of Measurement and Control (SAIMC), the South African Institute of Electrical Engineers (SAIEE) and the South African Institute for Mining and Metallurgy (SAIMM). The combined team set about organising the first major IFAC international symposium in South Africa since 1976. The theme for the Symposium was based on the need to promote technology transfer and papers which addressed this issue were favoured. With over 50% of the authors from other countries, a significant opportunity for technology transfer into South Africa was created, which is in keeping with the overall theme.
