Meta-Learning Lan Zou, 2022-11-05 Deep neural networks (DNNs) with their dense and complex algorithms provide real possibilities for Artificial General Intelligence (AGI). Meta-learning with DNNs brings AGI much closer: artificial agents solving intelligent tasks that human beings can achieve, even transcending what they can achieve. Meta-Learning: Theory, Algorithms and Applications shows how meta-learning in combination with DNNs advances towards AGI. Meta-Learning: Theory, Algorithms and Applications explains the fundamentals of meta-learning by providing answers to these questions: What is meta-learning?; why do we need meta-learning?; how are self-improved meta-learning mechanisms heading for AGI?; how can we use meta-learning in our approach to specific scenarios? The book presents the background of seven mainstream paradigms: meta-learning, few-shot learning, deep learning, transfer learning, machine learning, probabilistic modeling, and Bayesian inference. It then explains important state-of-the-art mechanisms and their variants for meta-learning, including memory-augmented neural networks, meta-networks, convolutional Siamese neural networks, matching networks, prototypical networks, relation networks, LSTM meta-learning, model-agnostic meta-learning, and the Reptile algorithm. The book takes a deep dive into nearly 200 state-of-the-art meta-learning algorithms from top tier conferences (e.g. NeurIPS, ICML, CVPR, ACL, ICLR, KDD). It systematically investigates 39 categories of tasks from 11 real-world application fields: Computer Vision, Natural Language Processing, Meta-Reinforcement Learning, Healthcare, Finance and Economy, Construction Materials, Graphic Neural Networks, Program Synthesis, Smart City, Recommended Systems, and Climate Science. Each application field concludes by looking at future

trends or by giving a summary of available resources. Meta-Learning: Theory, Algorithms and Applications is a great resource to understand the principles of meta-learning and to learn state-of-the-art meta-learning algorithms, giving the student, researcher and industry professional the ability to apply meta-learning for various novel applications. A comprehensive overview of state-of-the-art meta-learning techniques and methods associated with deep neural networks together with a broad range of application areas Coverage of nearly 200 state-of-the-art meta-learning algorithms, which are promoted by premier global AI conferences and journals, and 300 to 450 pieces of key research Systematic and detailed exploration of the most crucial state-of-the-art meta-learning algorithm mechanisms: model-based, metric-based, and optimization-based Provides solutions to the limitations of using deep learning and/or machine learning methods, particularly with small sample sizes and unlabeled data Gives an understanding of how meta-learning acts as a stepping stone to Artificial General Intelligence in 39 categories of tasks from 11 real-world application fields

Following Muhammad (EasyRead Super Large 20pt Edition) Carl W. Ernst, 2004 [In this book, the author] introduces readers to the profound spiritual resources of Islam while clarifying diversity and debate within the tradition. One out of five people in the world are Muslim only 18 percent of those, however, are Arab. [The author] moves away from a Middle Eastern bias, addressing the pluralistic nature of Muslim societies and thought. Framing his argument in terms of religious studies, [he] describes how Protestant definitions of religion and anti-Muslim prejudice have affected views of Islam in Europe and America. [He] also covers the contemporary importance of Islam in both its traditional settings and its new locations and provides a context for understanding extremist movements like fundamentalism. With translations of selections from Islamic texts, some appearing in English for the first time, [he] offers access to Muslim voices and key themes, particularly the central role of the Prophet Muhammad. He concludes with an overview of critical debates on important contemporary issues such as gender and veiling, state politics, and science and religion. A concise selected reading list provides a helpful guide for future study. This ... introduction to Islam should be every non-Muslim's first resource for learning about a religion that is a major presence in the world.- <http://www.loc.gov>.

Introduction to a Negative Approach to Argumentation Julio Cabrera, 2019-10-25 This work deals with argumentation in philosophy. In the “affirmative” view of argumentation, each party thinks it is right while all other positions are wrong; argumentation is seen as guided by a set of rules that should lead to the resolution of the dispute in favor of one party. This book advances a critique of such an

approach, proposing instead a negative one, the central idea of which is that each party organizes the elements of the problem concerning the definition of terms, the assumptions to be accepted, and the types of logical resources being used. The negative approach attempts to modify the ethics of philosophical discussions, moving towards pluralism, a diversity of perspectives, and the capacity to adopt a panoramic view where one's own posture appears only as one among others. Argumentation is a ubiquitous matter; professionals of all areas will have to argue to support their positions, in diplomacy, medicine or religion and in everyday life. In any of these contexts, the distinction between an affirmative and a negative approach to argumentation matters. The book will particularly appeal to graduate and postgraduate students in philosophy, psychology, pedagogy and communication, as well as the general reader interested in philosophy.

The Meaning of Being Illuminati Nicolas Laos, 2019-05-23 This book articulates a new research program, called "Ur-Illuminism," which consists in an integrated and systematic study of humanity's quest for "illumination," namely, for the highest and noblest possible mode of being. Thus, it takes on the challenge of revising widely accepted ways of understanding and interpreting the ontological underpinnings of civilization and the ontological potential of humanity. It allows the reader to delve into a creative "rediscovery" of Platonism, medieval Christian mystics' and scholars' writings, and various "illuminist" systems, from the Orphic mystical cult to the European Enlightenment and thence to the eighteenth-century Illuminati fraternities and beyond. Moreover, the book studies major issues in the history of philosophy, politology, and esoteric systems (such as Hermeticism, the Kabbalah, alchemy, the Rosicrucian movement, Freemasonry, and the Bavarian Illuminati). It maintains that a postmodern "rediscovery" of premodern metaphysics, specifically, a postmodern esoteric theocracy (as distinct from old sacerdotalism and religious formalism), is the best bulwark against oppression

and the ontological degradation of humanity, as well as the best path to the attainment of that wisdom and spiritual self-knowledge which constitute the existential integration and completion of the human being. In this context, it proposes a peculiar and intellectually fecund synthesis between Tory Anarchism, Libertarianism, Platonism, and Byzantine Hesychasm, as they are elucidated here.

Of Mozart, Parrots and Cherry Blossoms in the Wind Bruce Adolphe, 1999 The exhilarating mix of humour, philosophy, fact and whimsy that marks these essays derives from more than 200 lectures Bruce Adolphe has given over more of the past decade, at the Chamber Music Society of Lincoln Centre and at music festivals around the States. The composer of four operas as well as chamber music, concertos and orchestral works, Adolphe has written for Itzhak Perlman, David Shifrin, the
