**M8 Greyhound Light Armored Car 1941–91** Steven J. Zaloga, 2012-09-20 The M8 light armored car was the only significant wheeled combat vehicle used by the US Army in World War II. In conjunction with the lightly armed utility version, the M20, it was the staple of the army's cavalry squadrons for use in reconnaissance and scouting. First entering combat in Italy in 1943, it was widely used throughout the campaign in northwest Europe, though its off-road performance was found to be wanting. This title describes the design and development of the M8, covering the many variants that were produced during World War II and afterwards, along with a comprehensive survey of its operational use.

The Numerical Method of Lines and Duality Principles Applied to Models in Physics and Engineering Fabio Silva Botelho, 2024-02-06 The book includes theoretical and applied results of a generalization of the numerical method of lines. A Ginzburg-Landau type equation comprises the initial application, with detailed explanations about the establishment of the general line expressions. Approximate numerical procedures have been developed for a variety of equation types, including the related algorithms and software. The applications include the Ginzburg-Landau system in superconductivity, applications to the Navier-Stokes system in fluid mechanics and, among others, models in flight mechanics. In its second and final parts, the book develops duality principles and numerical results for other similar and related models. The book is meant for applied mathematicians, physicists and engineers interested in numerical methods and concerning duality theory. It is expected the text will serve as a valuable auxiliary project tool for some important engineering and physics fields of research.
