TRP Channels Michael X. Zhu, 2016-04-19 The rapid expansion of the TRP field has generated a large amount of excellent original work across many different research fields. However, investigators are not necessarily familiar with the pros and cons of the variety of methods used to study TRP channels. Because of functional and genetic diversity, as well as the different physiological roles

Facing Global Environmental Change Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Ursula Oswald Spring, Béchir Chourou, Czesław Mesjasz, Heinz Krummenacher, 2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth Assessment Report (AR4) of the Intergovernmental Panel on Climate Change (IPCC), which were disseminated on a large scale and reported extensively by the media. This was the result not only of a heightened interest on the part of the public on various aspects of climate change, but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large. The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US, Al Gore. By taking this decision in favour of a leader who has done a great deal to create awareness on climate change, and a body that assesses all scientific aspects of climate change and disseminates the result of its findings, the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world.

TV Drama in China Ying Zhu, Michael Keane, Ruoyun Bai, 2008-10-01 This collection of essays brings together the first comprehensive study of TV drama in China. Examining in depth the production, distribution and consumption of TV drama, the international team of experts demonstrate why it remains the pre-eminent media form in China. The examples are diverse, highlighting the complexity of producing narrative content in a rapidly changing political and social environment. Genres examined include the revisionist Qing drama, historical and contemporary domestic dramas, anti-corruption dramas, pink dramas, Red Classics, stories from the Diaspora, and sit-coms. In addition to genres, the collection explores industry dynamics: how TV dramas are marketed and consumed on DVD, and China's aspirations to export its television drama rights. The book provides an international and cross-cultural perspective with chapters on Taiwanese TV drama in China, the impact of South Korean drama, and trans-border production between the Mainland and Hong Kong.

Optical Multidimensional Coherent Spectroscopy Hebin Li, Bachana Lomsadze, Galan Moody, Christopher Smallwood, Steven Cundiff, 2023-02-28 This book provides an introduction to optical multidimensional coherent spectroscopy, a relatively new method of studying materials based on using ultrashort light pulses to perform spectroscopy. The technique has been developed and perfected over the last 25 years, resulting in multiple experimental approaches and applications to a broad array of systems ranging from atoms and molecules to solids and biological systems. Indeed, while this method is most often used by physical chemists, it is also relevant to materials of interest to physicists, which is the primary focus of this book. As well as an introduction to the method, the book also provides tutorials on the interpretation of the rather complex spectra that is broadly applicable across all subfields, and finishes with a survey of several emerging material systems and a discussion of future directions.

Machine Learning on Commodity Tiny Devices Song Guo, Qihua Zhou, 2022-11-24 This book aims at the tiny machine

learning (TinyML) software and hardware synergy for edge intelligence applications. It presents on-device learning techniques covering model-level neural network design, algorithm-level training optimization, and hardware-level instruction acceleration. Analyzing the limitations of conventional in-cloud computing would reveal that on-device learning is a promising research direction to meet the requirements of edge intelligence applications. As to the cutting-edge research of TinyML, implementing a high-efficiency learning framework and enabling system-level acceleration is one of the most fundamental issues. This book presents a comprehensive discussion of the latest research progress and provides system-level insights on designing TinyML frameworks, including neural network design, training algorithm optimization and domain-specific hardware acceleration. It identifies the main challenges when deploying TinyML tasks in the real world and guides the researchers to deploy a reliable learning system. This volume will be of interest to students and scholars in the field of edge intelligence, especially to those with sufficient professional Edge AI skills. It will also be an excellent guide for researchers to implement high-performance TinyML systems.

The Spirit of Individualism Lansheng Zhang, 2023-02-02 This book is about avant-garde art in Shanghai in the 1980s which challenges the narrative in the current discourse on the appearance of contemporary art in China. Offering fresh perspectives and new insights into the art and the artists of this period, the book includes critical events in Shanghai, that will attract the serious attention of art professionals and collectors. The emergence of the Shanghai art scene in the 1980s mirrors the revitalisation of Shanghai that was tasked to lead China's economic development trajectory onto the world stage. Shanghai, with its semi-colonial, political, economic and cultural history, including the strong legacy of the early twentieth century modernist art movement, has played a vital role in China's modernisation and presents itself as a unique case in the evolution of contemporary art in China.

Designing Machine Learning Systems Chip Huyen, 2022-05-17 Machine learning systems are both complex and unique. Complex because they consist of many different components and involve many different stakeholders. Unique because they're data dependent, with data varying wildly from one use case to the next. In this book, you'll learn a holistic approach to designing ML systems that are reliable, scalable, maintainable, and adaptive to changing environments and business requirements. Author Chip Huyen, co-founder of Claypot AI, considers each design decision--such as how to process and create training data, which features to use, how often to retrain models, and what to monitor--in the context of how it can help your system as a whole achieve its objectives. The iterative framework in this book uses actual case studies backed by ample references. This book will help you tackle scenarios such as: Engineering data and choosing the right metrics to solve a business problem Automating the process for continually developing, evaluating, deploying, and updating models Developing a monitoring system to quickly detect and address issues your models might encounter in production Architecting an ML platform that serves across use cases Developing responsible ML systems

Ritual, Emotion, Violence Elliott B. Weininger, Annette Lareau, Omar Lizardo, 2018-07-27 Microsociologists seek to capture social life as it is experienced, and in recent decades no one has championed the microsociological approach more fiercely than Randall Collins. The pieces in this exciting volume offer fresh and original insights into key aspects of Collins' thought, and of microsociology more generally. The introductory essay by Elliot B. Weininger and Omar Lizardo provides a lucid overview of the key premises this perspective. Ethnographic papers by Randol Contreras, using data from New York, and Philippe Bourgois and Laurie Kain Hart, using data from Philadelphia, examine the social logic of violence in street-level narcotics markets. Both draw on heavily on Collins' microsociological account of the features of social situations that tend to engender violence. In the second section of the book, a study by Paul DiMaggio, Clark Bernier, Charles Heckscher, and David Mimno tackles the question of whether electronically mediated interaction exhibits the ritualization which, according to Collins, is a common feature of face-to-face encounters. Their results suggest that, at least under certain circumstances, digitally mediated interaction may foster social solidarity in a manner similar to face-to-face interaction. A chapter by Simone Polillo picks up from Collins' work in the sociology of knowledge, examining multiple ways in which social network structures can engender intellectual creativity. The third section of the book contains papers that critically but sympathetically assess key tenets of microsociology. Jonathan H. Turner argues that the radically microsociological perspective developed by Collins will better serve the social scientific project if it is embedded in a more comprehensive paradigm, one that acknowledges the macro- and meso-levels of social and cultural life. A chapter by David Gibson presents empirical analyses of decisions by state leaders concerning whether or not to use force to deal with internal or external foes, suggesting that Collins' model of interaction ritual can only partially illuminate the dynamics of these highly consequential political moments. Work by Erika Summers-Effler and Justin Van Ness seeks to systematize and broaden the scope of Collins' theory of interaction, by including in it encounters that depart from the ritual model in important ways. In a final, reflective chapter, Randall Collins himself highlights the promise and future of microsociology. Clearly written, these pieces offer cutting-edge thinking on some of the crucial theoretical and empirical issues in sociology today.

These include the defeat by the British in the Opium Wars, the twin-track administration of Manchus and Han Chinese, the rise of Chinese military leaders in southern China, the purchase of office and endemic corruption, the challenge of the Taiping Heavenly Kingdom, and the failure of political reform. There are new insights on all the Qing emperors and the Empress Dowager Cixi, who ruled China between 1861 and 1908.

Strength in Numbers: The Rising of Academic Statistics Departments in the U. S. Alan Agresti, Xiao-Li Meng, 2012-11-02 Statistical science as organized in formal academic departments is relatively new. With a few exceptions, most Statistics and Biostatistics departments have been created within the past 60 years. This book consists of a set of memoirs, one for each department in the U.S. created by the mid-1960s. The memoirs describe key aspects of the department's history -- its founding, its growth, key people in its development, success stories (such as major research accomplishments) and the occasional failure story, PhD graduates who have had a significant impact, its impact on statistical education, and a summary of where the department stands today and its vision for the future. Read here all about how departments such as at Berkeley, Chicago, Harvard, and Stanford started and how they got to where they are today. The book should also be of interests to scholars in the field of disciplinary history.
