n=1: How the Uniqueness of Each Individual Is Transforming Healthcare John Koster, Gary Bisbee, Ram Charan, 2015-01-27 This book, n=1 is a collaboration of physician health system CEO, venture capital entrepreneur and leading global business advisor and best-selling business author. These differing perspectives provide insights into the forces transforming the global society, business and professions with a focus on US healthcare and its transformation. Healthcare leaders must develop the incisive questions that challenge the orthodoxies hindering organizational transformation. Our experience indicates leaders of successful non-healthcare organizations develop cultures of inquiry that guide their organizations through dramatic market change. Unique individuals are the driving force in the transformation of healthcare. Digitization has democratized information, which feeds the desire of people to act, behave and be treated as unique individuals. Scientific innovation is revealing the importance of our biologic individuality. The financial risk of healthcare is increasingly passed to individuals and providers, fueling changes in financial incentives. An individual with information knows their options, and wants to choose the option most suited to his or her unique healthcare needs and financial means. This profound and fundamental change in the individual's expectations and behavior is accelerating healthcare transformation. The title of this book, n = 1, is a symbol of the uniqueness of individuals. The n=1 will transform healthcare.

**Other Russias** Victoria Lomasko, 2017-06-15 From a renowned graphic artist and activist, an incredible portrait of life in Russia today 'Victoria Lomasko's gritty, street-level view of the great Russian people masterfully intertwines quiet desperation with open defiance. Her drawings have an on-the-spot immediacy that I envy. She is one of the brave ones' - Joe Sacco, author of Palestine What does it mean to live in Russia today? What is it like to grow up in a forgotten city, to be a migrant worker or to

grow old and seek solace in the Orthodox church? For the past eight years, graphic artist and activist Victoria Lomasko has been travelling around Russia and talking to people as she draws their stories. She spent time in dying villages where schoolteachers outnumber students; she stayed with sex workers in the city of Nizhny Novgorod; she went to juvenile prisons and spoke to kids who have no contact with the outside world; and she attended every major political rally in Moscow. The result is an extraordinary portrait of Russia in the Putin years -- a country full of people who have been left behind, many of whom are determined to fight for their rights and for progress against impossible odds. Empathetic, honest, funny, and often devastating, Lomasko's portraits show us a side of Russia that is hardly ever seen.

**The Essential Guide to N-of-1 Trials in Health** Jane Nikles, Geoffrey Mitchell, 2015-10-05 N-of-1 trials, a type of individualized randomized controlled trial, are relevant to almost every discipline in medicine and psychology. They can tell the clinician with precision whether a treatment works in that individual, which distinguishes from the information available from most other trial designs. They have the potential to revolutionize the way clinical medicine is practiced. Whether you are a busy clinician, a researcher or a student, this book provides everything you need to know about N-of-1 trials. Written and edited by some of the world's leading experts on N-of-1 trials, the book presents state of the art knowledge about N-of-1 trials, with chapters on ethics, statistics, health economics, design, analysis and reporting, and more. Full of examples and well illustrated, it is a comprehensive compendium of issues surrounding the design, conduct, interpretation and implementation of N-of-1 trials in a health system.

*City by City* Keith Gessen, Stephen Squibb, 2015-05-12 A collection of essays—historical and personal—about the present and future of American cities Edited by Keith Gessen and Stephen

Squibb, *City by City* is a collection of essays—historical, personal, and somewhere in between—about the present and future of American cities. It sweeps from Gold Rush, Alaska, to Miami, Florida, encompassing cities large and small, growing and failing. These essays look closely at the forces—gentrification, underemployment, politics, culture, and crime—that shape urban life. They also tell the stories of citizens whose fortunes have risen or fallen with those of the cities they call home. A cross between Hunter S. Thompson, Studs Terkel, and the Great Depression-era WPA guides to each state in the Union, *City by City* carries this project of American storytelling up to the days of our own Great Recession.

*What We Should Have Known* Keith Gessen, 2007 Cultural Writing. Literary Criticism. The two discussions in *WHAT WE SHOULD HAVE KNOWN* took place at the offices of n+1 in the summer of 2007. Eleven n+1 editors and contributors—including Caleb Crain, Meghan Falvey, Mark Greif, and Ilya Bernstein—met to talk frankly about regrets they have (or don't have) about college—what they wish they had read or had not read, listened to or not listened to, thought or not thought, been or not been. The idea for the discussions was prompted by a desire to give college

students a directed guide, of some sort, to the world of literature, philosophy, and thought that they might not otherwise receive from the current highly specialized university environment. They were also an attempt to answer the canon-based approach to college study in two ways: by identifying canonical books produced by our contemporaries or near-contemporaries-- something conservative writers have always refused to do--and, second, by articulating a better reason to read the best books ever written than that they authorize and underwrite a system of brutal economic competition and inequality.

*Theory of Multicodimensional (n+1)-Webs* Vladislav V. Goldberg,2012-12-06 Approach your problems from the right end It isn't that they can't see the solution. It is and begin with the answers. Then one day, that they can't see the problem. perhaps you will find the final question. G. K. Chesterton. The Scandal of Father 'The Hermit Clad in Crane Feathers' in R. Brown 'The point of a Pin'. van Gulik's The Chinese Maze Murders. Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics. However, the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches. It also happens, quite often in fact, that branches which were thought to be completely disparate are suddenly seen to be related. Further,

the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used (non-trivially) in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, coding theory and the structure of water meet one another in packing and covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering; and prediction and electrical engineering can use Stein spaces. And in addition to this there are such new emerging subdisciplines as experimental mathematics, CFD, completely integrable systems, chaos, synergetics and large-scale order, which are almost impossible to fit into the existing classification schemes. They draw upon widely different sections of mathematics.

**The Next Shift** Gabriel Winant,2021-03-23 Men in hardhats were once the heart of America's working class; now it is women in scrubs. What does this shift portend for our future? Pittsburgh was once synonymous with steel. But today most of its mills are gone. Like so many places across the United States, a city that was a center of blue-collar manufacturing is now dominated by the service economy—particularly health care, which employs more Americans than any other industry. Gabriel Winant takes us inside the Rust Belt to show how America's cities have weathered new economic realities. In Pittsburgh's neighborhoods, he finds that a new working class has emerged in the wake of deindustrialization. As steelworkers and their families grew older, they required more health care. Even as the industrial economy contracted sharply, the care economy thrived. Hospitals and nursing homes went on hiring sprees. But many care jobs bear little resemblance to the manufacturing work the city lost. Unlike their blue-collar predecessors, home health aides and hospital staff work unpredictable hours for low pay. And the new working class disproportionately comprises women and people of color.

Today health care workers are on the front lines of our most pressing crises, yet we have been slow to appreciate that they are the face of our twenty-first-century workforce. The Next Shift offers unique insights into how we got here and what could happen next. If health care employees, along with other essential workers, can translate the increasing recognition of their economic value into political power, they may become a major force in the twenty-first century.

*We Believe the Children* Richard Beck, 2015-08-04 In the 1980s in California, New Jersey, and New York, Michigan, Massachusetts, and Florida, Tennessee, Texas, Ohio, and

elsewhere, daycare workers were arrested, charged, tried, and convicted of committing horrible sexual crimes against the children they cared for. These crimes, prosecutors said, had gone undetected for years, and their brutality and sadism defied all imagining. What's more, the abusers had photographed and videotaped their victims, distributing the images through a sophisticated international network of child pornographers. More often than not, violent satanic cult worship had also played a central role, with children made to watch forced abortions in cemeteries and then eat hacked-off bits of the little corpses. In just over a decade, thousands of people in every part of the country were investigated as child sex abusers, and some one-hundred and fifty of them were sent to prison. But, none of it happened. It was an epic decade-long outbreak of collective hysteria - on a par with the Salem witch trials or the red scares of the 1950s. Using extensive archival research conducted in Los Angeles, Miami, New York, and elsewhere, and drawing on dozens of interviews conducted with the hysteria's major figures, Richard Beck shows how a group of legislators, doctors, lawyers, and parents, all working with the best of intentions, set the stage for a judicial disaster. A number of opportunistic journalists helped to carry the story from state to state, and the silence of their colleagues, who should have known better, allowed it to keep spreading long after it became clear that the story was simply unsupported by evidence. Beck reveals how a small group of skeptics finally began working to slow the runaway train in the last half of the decade, and he explores the fates of those accused and convicted of these unbelievable crimes, the casualties of a culture war. It is this culture war that is the book's pervasive subtext - the conditions that made possible the demented frenzy of accusations were very specific, and at the root of them were competing visions of society and the things that threatened it most.

**Who's #1?** Amy N. Langville, Carl D. Meyer, 2013-12-01 A

website's ranking on Google can spell the difference between success and failure for a new business. NCAA football ratings determine which schools get to play for the big money in postseason bowl games. Product ratings influence everything from the clothes we wear to the movies we select on Netflix. Ratings and rankings are everywhere, but how exactly do they work? *Who's #1?* offers an engaging and accessible account of how scientific rating and ranking methods are created and applied to a variety of uses. Amy Langville and Carl Meyer provide the first comprehensive overview of the mathematical algorithms and methods used to rate and rank sports teams, political candidates, products, Web pages, and more. In a series of interesting asides, Langville and Meyer provide fascinating insights into the ingenious contributions of many of the field's pioneers. They survey and compare the different methods employed today, showing why their strengths and weaknesses depend on the underlying goal, and explaining why and when a given method should be considered. Langville and Meyer also describe what can and can't be expected from the most widely used systems. The science of rating and ranking touches virtually every facet of our lives, and now you don't need to be an expert to understand how it really works. *Who's #1?* is the definitive introduction to the subject. It features easy-to-understand examples and interesting trivia and historical facts, and much of the required mathematics is included.

*Against Everything* Mark Greif, 2016 These essays address such key topics in the cultural, political, and intellectual life of our time as the tyranny of exercise, the tyranny of nutrition and food snobbery, the sexualization of childhood (and everything else), the philosophical meaning of Radiohead, the rise and fall of the hipster, the impact of the Occupy Wall Street movement, and the crisis of policing. Four of the selections address, directly and unironically, the meaning of life what might be the right philosophical stance to adopt toward one's self and the world. --
