**Communicating Process Architectures 2015 & 2016** K. Chalmers, J. Bækgaard Pedersen, F.R.M. Barnes, 2018-10-04 This book presents the proceedings of two conferences, the 37th and 38th in the WoTUG series; Communicating Process Architectures (CPA) 2015, held in Canterbury, England, in August 2015, and CPA 2016, held in Copenhagen, Denmark, in August 2016. Fifteen papers were accepted for presentation at the 2015 conference. They cover a spectrum of concurrency concerns: mathematical theory, programming languages, design and support tools, verification, multicore infrastructure and applications ranging from supercomputing to embedded. Three workshops and two evening fringe sessions also formed part of the conference, and the workshop

position papers and fringe abstracts are included in this book. Fourteen papers covering the same broad spectrum of topics were presented at the 2016 conference, one of them in the form of a workshop. They are all included here, together with abstracts of the five fringe sessions from the conference.

*Self-Consciousness* Masakazu Shoji,2020-02-24 A summary of author Masakazu Shoji's previous works, *Self-Consciousness: Human Brain as Data Processor*, explains self-consciousness by using a simple, mechanical model of the human brain, which reflects its past development of evolution by natural selection. The model was built from the information acquired from the unbiased, introspective observation of Shoji's own mind and other rational assumptions. In this study, geared for those with a background in the research and science of psychology, Shoji introduces a new approach based on systems and information science; it relies on the synthetic method of study by designing the human brain's functional model. It deals with the self-conscious directly, without adding in subconsciousness or quantum mystery, as has been done previously. The model was designed realistically using hardware built with genetic instructions, using neurons as the elements of digital and analog operations. Shoji shares that versions of this model reveal how humans acquire and store memories of images of the outside objects, sense the images internally, execute necessary actions directed by the images, feel an emotional state by facing life's events, and develop intelligence by accumulated experiences. The model also explains mysterious mental experiences, such as seeing dreams, daydreams, phantoms, ghosts, and feeling premonitions.

*European Access to Space: Business and Policy Perspectives on Micro Launchers* Matteo Tugnoli,Martin Sarret,Marco Aliberti,2018-05-31 The book provides an analysis of the dynamics of the global launch service market associated with small satellites, by placing a particular focus on its unfolding trends and future outlook. From an economic perspective, the emergence of numerous micro launcher initiatives on top of already existing launch solutions for small satellites raises questions about the specific nature and size of the small satellite market that will - or could - be addressed by these emerging launch services offerings. Identifying the specific features of such market by characterizing customers' expectations and providing a competitive analysis of the different launch solutions for small satellites is the second objective of this report. Finally, and from a policy perspective, the book reflects on whether such market could and should be handled on a purely private basis in the European context, or on the contrary generates relevant stakes that compels European institutional actors to become more actively involved in this domain.

**Regulus Missile Service and Launching Instructions** U. S. Navy,2009-02 The Regulus missile was a direct outgrowth of World War II. The success of Germany's V-1 buzz bombs and the awesome power of the a-bomb suggested that developing a submarine-launched, nuclear-armed guided missile was an imperative. The Chance-Vought Aircraft Company won the contract for Regulus with a bold proposal. Their missile resembled a pilotless jet aircraft, and during the test phase was equipped with landing gear, allowing the missile to be recovered rather than expended during the tests. Regulus would be radio controlled, either by a chase aircraft or by a nearby ship or submarine, and it could carry a nuclear payload. JATO boosters enabled submarine launch of the Regulus. It would be deployed aboard five submarines. They conducted the nation's first nuclear deterrent patrols off the coast of the Soviet Union in 1959-1964. Originally printed by the U.S. Navy and Chance-Vought, this handbook was restricted. It was declassified and is here reprinted in book form.

**Equivalent Circuit Model of Quantum Mechanics** Masakazu Shoji,2023-02-08 In the year of 2020, I published a book in psychology, "Self-consciousness, human brain as data processor". In the book, I proposed resolution of quantum mystery by human mind by providing a model. Quantum

mechanics has been developed by the basic philosophy that the theory's role is to identify the measurable quantum parameters and to provide the mathematical theory relating them. The model's role is, if that is available, only secondary, to rationalize the theory. I challenged this basic philosophy in this book. Quantum mechanics cannot be modeled by using any classical mechanics model, but it can be modeled by using the equivalent circuit model of electronics. I worked out the most basic details of this model and explained several mysterious quantum phenomena.
