Chasing Sound Susan Schmidt Horning,2015-12-01 How technically enhanced studio recordings revolutionized music and the music industry. In Chasing Sound, Susan Schmidt Horning traces the cultural and technological evolution of recording studios in the United States from the first practical devices to the modern multi-track studios of the analog era. Charting the technical development of studio equipment, the professionalization of recording engineers, and the growing collaboration between artists and technicians, she shows how the earliest efforts to capture the sound of live performances eventually resulted in a trend toward studio creations that extended beyond live shows, ultimately reversing the historic relationship between live and recorded sound. Schmidt Horning draws from a wealth of original oral interviews with major labels and independent recording engineers, producers, arrangers, and musicians, as well as memoirs, technical journals, popular accounts, and sound recordings. Recording engineers and producers, she finds, influenced technological and musical change as they sought to improve the sound of records. By investigating the complex relationship between sound engineering and popular music, she reveals the increasing reliance on technological intervention in the creation as well as in the reception of music. The recording studio, she argues, is at the center of musical culture in the twentieth century.

Recording Spaces Philip Newell, 1998-01-15 Recording Spaces deals with the acoustics of rooms intended for musical performance of many styles. It discusses these spaces in terms of isolation, internal acoustics, possible techniques of use, and the way that these spaces will interact with the musicians, their instruments, and the microphones. It deals with the concepts of sound isolation, examines some of the principal processes at work, and provides drawings and descriptions of actual rooms and techniques. The book describes how the isolation requirements have their effect on the internal acoustics of the rooms, and how the room treatments must be conceived with such interactions taken into consideration. Starting from the initial concepts, to the measurements of the finished items, Recording Spaces discusses many different types of room, from vocal 'booths' to orchestral rooms. There are many stories of how actual 'classical' musical performances, from rock to orchestral, have been inspired, or strongly influenced, by the acoustics of their recording spaces. Philip Newell lives in Spain and travels extensively - he is currently designing a concert hall in the Ukraine. Philip began his career working with classic groups such as The Who, whilst at the same time recording brass bands, Welsh male voice choirs, Scottish pipes, church and fairground organs, musicals, and classical recitals. After setting up Virgin Records' first studio he designed their Manor Mobile studio, produced the first recording with a 24-track mobile vehicle, and went on to design their Townhouse Studios in London.
