Internet Marketing Tips-Let Catherine Simmons,

The Social Semantic Web John G Breslin,Alexandre Passant,Stefan Decker,2009-10-03 The Social Web (including services such as MySpace, Flickr, last.fm, and WordPress) has captured the attention of millions of users as well as billions of dollars in investment and acquisition. Social websites, evolving around the connections between people and their objects of interest, are encountering boundaries in the areas of information integration, dissemination, reuse, portability, searchability, automation and demanding tasks like querying. The Semantic Web is an ideal platform for interlinking and performing operations on diverse person- and object-related data available from the Social Web, and has produced a variety of

approaches to overcome the boundaries being experienced in Social Web application areas. After a short overview of both the Social Web and the Semantic Web, Breslin et al. describe some popular social media and social networking applications, list their strengths and limitations, and describe some applications of Semantic Web technology to address their current shortcomings by enhancing them with semantics. Across these social websites, they demonstrate a twofold approach for interconnecting the islands that are social websites with semantic technologies, and for powering semantic applications with rich community-created content. They conclude with observations on how the application of Semantic Web technologies to the Social Web is leading towards the Social Semantic Web (sometimes also called Web 3.0), forming a network of interlinked and semantically-rich content and knowledge. The book is intended for computer science professionals, researchers, and graduates interested in understanding the technologies and research issues involved in applying Semantic Web technologies to social software. Practitioners and developers interested in applications such as blogs, social networks or wikis will also learn about methods for increasing the levels of automation in these forms of Web communication.

Cyber Racism Jessie Daniels,2009-03-16 In this exploration of the way racism is translated from the print-only era to the cyber era the author takes the reader through a devastatingly informative tour of white supremacy online. The book examines how white supremacist organizations have translated their printed publications onto the Internet. Included are examples of open as well as 'cloaked' sites which disguise white supremacy sources as legitimate civil rights websites. Interviews with a small sample of teenagers as they surf the web show how they encounter cloaked sites and attempt to make sense of them, mostly unsuccessfully. The result is a first-rate analysis of cyber racism within the global information age. The author debunks the common assumptions that the Internet is either an inherently democratizing technology or an effective 'recruiting' tool for white supremacists. The book concludes with a nuanced, challenging analysis that urges readers to rethink conventional ways of knowing about racial equality, civil rights, and the Internet.

To this day, existing ranking approaches to user-generated content do not allow for evaluation across platforms by exploiting its metadata. User-generated content, such as blog postings, forum discussions, shared videos etc. does however contain information that can be used for its evaluation independent of specific search interests. Claudia Wyrwoll presents a query- and language-independent ranking approach that allows for global evaluation of user-generated content across different platforms. Building on an insightful introduction into social media fundamentals, she proposes new models describing phenomena associated with social media, laying the foundation for further research and development.
