Food Process Engineering F. Xavier Malcata,2020-12-13 Food Process Engineering: Safety Assurance and Complements pursues a logical sequence of coverage of industrial processing of food and raw material where safety and complementary issues are germane. Measures to guarantee food safety are addressed at start, and the most relevant intrinsic and extrinsic factors are reviewed, followed by description of unit operations that control microbial activity via the supply of heat supply or the removal of heat. Operations prior and posterior are presented, as is the case of handling, cleaning, disinfection and rinsing, and effluent treatment and packaging, complemented by a brief introduction to industrial utilities normally present in a food plant. Key Features: Overviews the technological issues encompassing properties of food products Provides comprehensive mathematical simulation of food processes Analyzes the engineering of foods at large, and safety and complementary operations in particular, with systematic derivation of all relevant formulae Discusses equipment features required by the underlying processes

Chemistry and Metallurgy A. Sherry,J. S. Beck,A.E. Cruddace,2013-10-22 Modern Power Station Practice, Volume 5: Chemistry and Metallurgy focuses on power station chemistry and metallurgy. The book first offers information on power station chemistry, including the use, preparation, sampling, storage, and transport of coal to power stations. Other considerations include the commercial use of ash, analysis and testing of coal and coke, gas-side cleaning of boilers, oil firing, burner fuels, testing of fuel oils and gases, and air pollution. The text also reviews water treatment relative to the operation of boilers. The corrosion of metals; sampling and analysis of feed water, boiler water, and steam; instrumentation for quality control; and on-load corrosion of boilers are discussed. The book also looks at cooling water systems in water treatment plants. Topics include water softening, evaporators, sources and quality of raw water, demineralization, and boiler feed water composition. The text also gives emphasis to plant cleaning and inspection and metallurgy and welding. The book is a valuable reference for readers interested in power station chemistry and metallurgy.
