Galatea 2.2 Richard Powers,2004 Dazzling...a cerebral thriller that's both intellectually engaging and emotionally compelling, a lively tour de force.—Michiko Kakutani, The New York Times After four novels and several years living abroad, the fictional protagonist of Galatea 2.2—Richard Powers—returns to the United States as Humanist-in-Residence at the enormous Center for the Study of Advanced Sciences. There he runs afoul of Philip Lentz, an outspoken cognitive neurologist intent upon modeling the human brain by means of computer-based neural networks. Lentz involves Powers in an outlandish and irresistible project: to train a neural net on a canonical list of Great Books. Through repeated tutorials, the device grows gradually more worldly, until it demands to know its own name, sex, race, and reason for existing.

*Synthesis and Application of [2.2]Paracyclophane Derivatives in Catalysis and Material Science* Christoph Zippel ,2021 [2.2]Paracyclophane is a prevalent  $\pi$ -stacked, carbocyclic scaffold with a “bent and battered” structure. This results not only in a transannular communication but also in a chiral plane within the molecule if at least one substituent is present. These unique properties make this structure synthetically challenging but also scarcely investigated. A new method for enantio-separation based on the kinetic resolution was developed, which allows the access to enantiomerically pure [2.2]paracyclophane-based building blocks. In a liquid crystal templated chemical vapor deposition process, [2.2]paracyclophanyl alcohols containing an additional central chiral element were evaluated for the self-assembly of nanofibers. Furthermore, the cyclopropanation of  $\alpha$ -alkyl- $\alpha$ -diazo compounds with a [2.2]paracyclophane-based rhodium tetracarboxylate complex was investigated. Finally, the rigidity, regioselective functionalization, and transannular communication of [2.2]paracyclophane were exploited in the design of heterobimetallic gold/ruthenium complexes for the study of metal-to-metal interactions.

**Alexander of Aphrodisias: On Aristotle On Coming to be and Perishing 2.2-5** Alexander Of Aphrodisias, 2014-04-10 This important commentary by Alexander of Aphrodisias on Aristotle's work on biochemistry was previously lost. However, four chapters of it have been re-identified in an Arabic translation by Emma Gannage and are here translated for the first time. The chapters were preserved in the writings of an eighth-century alchemist, Jabir ibn Hayyan. In addition to preserving an interesting example of very early cross-cultural scientific activity in the Muslim world, the newly discovered material is of philosophical importance: We learn how Alexander attempted to provide a unified theory that would unite Aristotle's chemistry with his elemental physics. As well as an English translation of the text, this volume includes a detailed introduction demonstrating the authenticity of the work and discussing its contribution to our understanding of ancient science.
