The Employment Legacy of the 2012 Olympic Games Niloufar Vadiati,2019-11-21 This book offers a detailed account of the employment promises made to local East Londoners when the Summer Olympic Games 2012 were awarded to London, as well as an examination of how those promises had morphed into the Olympic Labor market jamboree from which local communities were excluded. Regarding the global job market of London, this study provides a nuanced empirical view on how the world's biggest mega event was experienced and endured in terms employment by its immediate hosts, in one of the UK's poorest, most ethnically complex, and transient areas. The data has been collected through ethnographic observation and interviews with local residents, and expert interviews with the Olympic delivery professionals. Using Bourdieusian theory of contested capital, the findings provide an important bearing on the reproduction of inequality in the local labor markets of Olympic host cities.

International Conference on Theory and Application in Nonlinear Dynamics (ICAND 2012) Visarath In, Antonio Palacios, Patrick Longhini, 2013-12-13 A collection of different lectures presented by experts in the field of nonlinear science provides the reader with contemporary, cutting-edge, research works that bridge the gap between theory and device realizations of nonlinear phenomena. Representative examples of topics covered include: chaos gates, social networks, communication, sensors, lasers, molecular motors, biomedical anomalies, stochastic resonance, nano-oscillators for generating microwave signals and related complex systems. A common theme among these and many other related lectures is to model, study, understand, and exploit the rich behavior exhibited by nonlinear systems to design and fabricate novel technologies with superior characteristics. Consider, for instance, the fact that a shark's sensitivity to electric fields is 400 times more powerful than the most sophisticated electric-field sensor. In spite of significant advances in material properties, in many cases it remains a daunting task to duplicate the superior signal processing capabilities of most animals. Since nonlinear systems tend to be highly sensitive to perturbations when they occur near the onset of a bifurcation, there are also lectures on the general topic of bifurcation theory and on how to exploit such bifurcations for signal enhancements purposes. This manuscript will appeal to researchers interested in both theory and implementations of nonlinear systems.

2012 Alexandra Bruce,2009-09-01 The expanded companion book to the #1 documentary film about 2012! The 2012 meme has evolved beyond any debates about the relevance of the Maya Long Count calendar to the lives of contemporary human beings. 2012 is about us on planet Earth at this time. December 21, 2012: will the world really change forever on this date, the end of a 5,125-year calendar last used over a thousand years ago? Certainly Hollywood would like you to think so. Indeed, a not-so-small industry has arisen around the date, hawking everything from t-

shirts to teleseminars. Clearing a path between fantasy and reality, Alexandra Bruce surveys the entire 2012 landscape, asking questions such as: Is the Earth losing its Mojo? How did 2012 come to mean The End of Time? Did psychedelics facilitate the Maya Cosmovision? Should we worry about Earth Crustal Displacement? What the hell is Planet X? Uniquely amongst a vast array of 2012 literature, this book features interviews with the leading experts—including Graham Hancock, John Major Jenkins, Daniel Pinchbeck and many others—and insightful, detailed analysis of the broad spectrum of opinion, debate, research and myth regarding the most compelling end times prediction of the 21st century.
