n-Dimensional Nonlinear Psychophysics Robert A. M. Gregson,2021-09-30 Originally published in 1992, this work compliments and extends the theory and results of nonlinear psychophysics – an original approach created by the author. It breaks with the traditional mathematics used in the experimental psychology of sensation and draws on what is popularly known as chaos theory and its extension into neural networks. Topical and innovative in its approach, it integrates a diversity of topics previously treated separately into one framework. The properties of the mathematics used are illustrated in the context of substantive problems in psychophysics; thus, it builds strong new bridges between the dynamics of mass action in psychophysical processes and the broader phenomena of sensation. No other treatments of the topic take quite this approach; the use of systems theory, rather than traditional equations of psychophysics dating from the mid-nineteenth century, offers a striking contrast in both theory construction and data analysis.

African Dept.,2023-01-12 Growth was weaker than expected in 2021, reflecting primarily production disruptions in the oil sector, while inflation remained subdued. The poor 2021/2022 crop year, severe floods and Russia's war in Ukraine have exacerbated food insecurity and increased inflation in 2022. Security and social conditions remain difficult, while the political transition has suffered significant delays.

Multipurpose Prevention Technologies for HIV, STIs & Pregnancies Barbara Friedland,Andrea Ries Thurman,Karl

Malcolm,Harriet Nuwagaba-Biribonwoha,2024-02-01 Globally, women of reproductive age face two overlapping issues that have a significant impact on their health and well-being: unintended pregnancy and sexually transmitted infections (STIs), including HIV. A growing body of research indicates that the majority of women across geographies, ages, racial and ethnic backgrounds would prefer a multipurpose prevention technology (MPT) that combines protection against pregnancy and HIV/STIs versus individual products for contraception and disease prevention. Currently, male and female condoms are the only available MPTs. A wider range of MPT options will help women select methods that they are less apt to discontinue, as well as increase uptake by first-time users. A number of MPT candidates – intravaginal rings (IVRs), oral tablets, vaginal fast dissolving inserts (FDIs), implants, injectables and microarray patches (MAPs) are in various stages of development. The goal of this Research Topic is to invigorate continued development on MPTs by providing the most up-to-date research on specific products in development, identifying research gaps related to the field overall, and prepare for introduction into programs and healthcare systems. Our broad approach will cover formulation science, clinical trials, sociobehavioral research, and implementation science to present the latest thinking in all areas of MPT development from “bench to bedside.”

Data Analysis in Forensic Science Franco Taroni,Silvia Bozza,Alex Biedermann,Paolo Garbolino,Colin Aitken,2010-03-19 This is the first text to examine the use of statistical methods in forensic science and bayesian statistics in combination. The book is split into two parts: Part One concentrates on the philosophies of statistical inference. Chapter One examines the differences between the frequentist, the likelihood and the Bayesian perspectives, before Chapter Two explores the Bayesian decision-theoretic perspective further, and looks at the benefits it carries. Part Two then introduces the reader to the practical aspects involved: the application, interpretation, summary and presentation of data analyses are all examined from a Bayesian decision-theoretic perspective. A wide range of statistical methods, essential in the analysis of forensic scientific data is explored. These include the comparison of allele proportions in populations, the comparison of means, the choice of sampling size, and the discrimination of items of evidence of unknown origin into predefined populations. Throughout this practical appraisal there are a wide variety of examples taken from the routine work of forensic scientists. These applications are demonstrated in the ever-more popular R language. The reader is taken through these applied examples in a step-by-step approach, discussing the methods at each stage.
