The Dynamical Mordell–Lang Conjecture Jason P. Bell,Dragos Ghioca,Thomas J. Tucker,2016-04-20 The Dynamical Mordell-Lang Conjecture is an analogue of the classical Mordell-Lang conjecture in the context of arithmetic dynamics. It predicts the behavior of the orbit of a point x under the action of an endomorphism f of a quasiprojective complex variety X . More precisely, it claims that for any point x in X and any subvariety V of X , the set of indices n such that the n -th iterate of x under f lies in V is a finite union of arithmetic progressions. In this book the authors present all known results about the Dynamical Mordell-Lang Conjecture, focusing mainly on a p -adic approach which provides a parametrization of the orbit of a point under an endomorphism of a variety.
