The Language of Outsourced Call Centers Eric Friginal, 2009 The Language of Outsourced Call Centers is the first book to explore a large-scale corpus representing the typical kinds of interactions and communicative tasks in outsourced call centers located in the Philippines and serving American customers. The specific goals of this book are to conduct a corpus-based register comparison between outsourced call center interactions, face-to-face American conversations, and spontaneous telephone exchanges; and to study the dynamics of cross-cultural communication between Filipino call center agents and American callers, as well as other demographic groups of participants in outsourced call center transactions, e.g., gender of speakers, agents' experience and performance, and types of transactional tasks. The research design relies on a number of analytical approaches, including corpus linguistics and discourse analysis, and combines quantitative and qualitative examination of linguistic data in the investigation of the frequency distribution and functional characteristics of a range of lexico/syntactic features of outsourced call center discourse.

The Discourse of Nurse-Patient Interactions Shelley Staples, 2015-12-15 The Discourse of Nurse-Patient Interactions: Contrasting the communicative styles of U.S. and international nurses is the first book to quantitatively examine a wide range of linguistic features in a corpus of interactions between nurses and standardized patients. The main goal of this book is to compare the discourse of U.S. (L1 English speaking) and international (L2 English speaking) nurses. The research design relies on a mixed method approach, including both quantitative and qualitative discourse analysis of lexico-grammatical, interactional, prosodic, fluency, and non-verbal features; assessments of interactional effectiveness; and qualitative interviews with nurses. The book offers a detailed description of the situational characteristics of the interactions and compares the discourse of nurses and patients in order to contextualize differences in the communicative styles of the two nurse groups. The results provide new insight into the way that sociocultural and linguistic aspects of nurse discourse contribute to the delivery of patient-centered care.

PHP Security & Cracking Puzzles Maxim Kuznetsov, Igor Simdyanov, 2006 Concentrating on the process of breaking and protecting Web applications written in PHP, this book also considers related Web programming topics such as client technologies (HTML, cookies, JavaScript), application protocols (HTTP, SMTP), SQL query language, and the breaking and protecting of the Apache Web server. Because these techniques can only be achieved by practical work, the book is divided into two parts: one covering the problem (puzzles) and one devoted to solving the problem. Evaluating the main problem for many Web programmers protecting their applications from being hacked—that they think differently than hackers—this book allows the reader to think like a hacker and understand the techniques they use. The accompanying CD-ROM contains distributions of PHP, Apache, and MySQL for Windows and Linux and the source codes for all of the solutions discussed.
