Diagnostic Evaluation of the Knee Michael Strobel,Hans-Werner Stedtfeld,2012-12-06 Knee surgeons world wide have been aware that a beautifully illustrated book on diagnostic evaluation of the knee existed. What we in the English speaking world did not appreciate was the superb quality of the text that accompanied these splendid illustrations. Now, Dr. Michael Strobel and Dr. Hans-Werner Stedtfeld's work, *Diagnostic Evaluation of the Knee*, has been translated by Mr. Terry Telger into an English text that is clear and cogent. The authors' message is comprehensive and straight forward. They show how diagnosis of knee disorders lends itself to a disciplined, orderly thought process based on a substantial body of scientific knowledge. This book, through effective illustrations, clarity of text and thought, and subject organization, leads the reader through the diagnostic evaluation of the knee in an enjoyable and unforgettable way. Some may think the diagnostic process is dead with the advent of magnetic resonance imaging. They are wrong: the diagnostic process has never been more alive, and M. Strobel and H.-W. Stedtfeld capture the excitement of modern day diagnosis through the integration of many disciplines - anatomy, pathophysiology, general examination, special examinations, and special studies. This is the unique character of this book and why it will be a text appreciated by all who care for the knee-injured patient.

Surgery and Arthroscopy of the Knee Werner Müller,Werner Hackenbruch,2012-12-06 The need for greater international collaboration is becoming increasingly clear. Practically every nation or people has, in addition to its own characteristics and history, its own medical tradition. Methods and ways of thinking that are successfully established in one place may not be accepted in another for some time. The medical tradition and training in different countries can take quite different forms. What would our present knowledge be - Without the creative, spontaneous ideas and contributions from the romance countries? - Without the opportunity of research, as it is practised on a large scale in the USA, where so many young Europeans took their first steps in experimental science? - Without the conscientious clinical work done in Central Europe and the valuable experience gained there? - Without, finally, the sober and critical scientific approach, as fostered in the cool heads of Northern Europe for generations? None of these qualities is sufficient without the others, but together they are a source of strength. Ultimately, we hope, through sensible concentration of efforts (while maintaining variety), to overcome the lack of an integrated approach in experimental science and to prevent repetition of painful mistakes. In this regard, the first two ESKA congresses have brought us great advances.

The Knee and the Cruciate Ligaments R.P. Jakob,H.-U. Stäubli,2012-12-06 This book summarizes the experience gained by the Orthopedic Study Group for the Knee (OAK) of the Swiss Orthopedic Society in dealing with knee problems relating to deficiencies of the cruciate ligaments. The editors, R.P. Jakob and H.-U.Staubli, have collaborated with international authorities to produce this excellent work dealing with a great many aspects of knee surgery and especially the problems of the cruciate ligaments. For clarity, the book begins with definitions and explanations of basic biomechanical terms. The chapters on Anatomy and Biomechanics present up-to-date scientific information based on anatomic and biomechanical principles as they are applied in modern knee surgery. The second part of the book focuses on the OAK-sanctioned approach to knee documentation and evaluation, which is a valuable supplement to other knee evaluation schemes. The European Society for Knee Surgery (ESKA) and the American Orthopedic Society for Sports Medicine (AOSSM) are currently attempting to combine the advantages of the OAK system with an internationally valid evaluation scheme to create a standard evaluation and documentation system that will be acceptable to all physicians.

The Park Builders Thomas R. Cox,2011-04-21 Among the greatest attractions of the Pacific Northwest are its state parks, campgrounds and tree-lined highways. From Idaho hot springs to the Oregon coast, millions of people enjoy this priceless legacy every year but few stop to think about the source of this bounty. The Park Builders profiles the men who provided the parks, and the times that shaped them. From its beginnings as part of the progressive crusades to its evolution into an expected function of state government, the state parks movement in the Northwest is a window onto the political and social developments of the twentieth century. The states of Washington, Idaho, and Oregon were generally in the mainstream of the parks movement, but each of their histories is unique. Taken together, they help to define the nature and limitations of regionalism in the Northwest. Especially in the early years, the story of state parks was largely the story of individuals. Drawing extensively from interviews and personal papers, Thomas Cox creates memorable pictures of parks activists in each state. Robert Moran, creator of the battleship, Nebraska, spent a decade lobbying the state of Washington to accept his magnificent acreage on Orcas Island. Sam Boardman went from a road crew to the head of Oregon's park system, and took up his mission with a zeal that was literally religious: "To me a park is a pulpit," he wrote. "The more you keep it as He made it, the closer you are to Him." In Idaho, Senator Weldon Heyburn, no proponent of state expenditures, set out to create a national park, and ended up with a premier state park, named for him. State parks serve more people at far less expense than do those in the National Park System. Since their fates are determined largely at the state level, they are an ideal venue for the study of grassroots activism and regional trends. This book is the first to collect these themes into a coherent whole. It will serve as a model for further regional studies of its kind.
