Number Theory Kazuya Kato, Nobushige Kurokawa, Masato Kurihara, Takeshi Saito, 2000 This is the third of three related volumes on number theory. (The first two volumes were also published in the Iwanami Series in Modern Mathematics, as volumes 186 and 240.) The two main topics of this book are Iwasawa theory and modular forms. The presentation of the theory of modular forms starts with several beautiful relations discovered by Ramanujan and leads to a discussion of several important ingredients, including the zeta-regularized products, Kronecker's limit formula, and the Selberg trace formula. The presentation of Iwasawa theory focuses on the Iwasawa main conjecture, which establishes far-reaching relations between a p -adic analytic zeta function and a determinant defined from a Galois action on some ideal class groups. This book also contains a short exposition on the arithmetic of elliptic curves and the proof of Fermat's last theorem by Wiles. Together with the first two volumes, this book is a good resource for anyone learning or teaching modern algebraic number theory.

Strings, Branes and Extra Dimensions Steven Scott

Gubser, Joe D. Lykken, 2004 This book covers some recent advances in string theory and extra dimensions. Intended mainly for advanced graduate students in theoretical physics, it presents a

rare combination of formal and phenomenological topics, based on the annual lectures given at the School of the Theoretical Advanced Study Institute (2001) a traditional event that brings together graduate students in high energy physics for an intensive course of advanced learning. The lecturers in the School are leaders in their fields. The first lecture, by E D'Hoker and D Freedman, is a systematic introduction to the gauge-gravity correspondence, focusing in particular on correlation functions in the conformal case. The second, by L Dolan, provides an introduction to perturbative string theory, including recent advances on backgrounds involving Ramond-Ramond fluxes. The third, by S Gubser, explains some of the basic facts about special holonomy and its uses in string theory and M-theory. The fourth, by J Hewett, surveys the TeV phenomenology of theories with large extra dimensions. The fifth, by G Kane, presents the case for supersymmetry at the weak scale and some of its likely experimental consequences. The sixth, by A Liddle, surveys recent developments in cosmology, particularly with regard to recent measurements of the CMB and constraints on inflation. The seventh, by B Ovrut, presents the basic features of heterotic M-theory, including constructions that contain the Standard Model.

The eighth, by K Rajagopal, explains the recent advances in understanding QCD at low temperatures and high densities in terms of color superconductivity. The ninth, by M Sher, summarizes grand unified theories and baryogenesis, including discussions of supersymmetry breaking and the Standard Model Higgs mechanism. The tenth, by M Spiropulu, describes collider physics, from a survey of current and future machines to examples of data analyses relevant to theories beyond the Standard Model. The eleventh, by M Strassler, is an introduction to supersymmetric gauge theory, focusing on Wilsonian renormalization and analogies between three- and four-dimensional theories. The twelfth, by W Taylor and B Zwiebach, introduces string field theory and discusses recent advances in understanding open string tachyon condensation. The thirteenth, by D Waldram, discusses explicit model building in heterotic M-theory, emphasizing the role of the 8 gauge fields. The written presentation of these lectures is detailed yet straightforward, and they will be of use to both students and experienced researchers in high-energy theoretical physics for years to come. Time and Its Object Paolo Fortis,Susanne K  chler,2021-03-31

This volume examines the way objects and images relate to and shape notions of temporality and history. Bringing together ethnographic studies from the Lowlands of Central and South America and Melanesia, it explores the temporality inhering in images and artefacts from a comparative perspective. The chapters focus on how peoples in both regions ‘live in’ and ‘navigate’ time each through their distinctive systems of images and the processes and actions by which these come to be manifest in objects. With original theoretical and ethnographic contributions, the book is valuable reading for scholars interested in visual and material culture and in anthropological approaches to time.

Considerations of Territorial Planning, Space, and Economic Activity in the Global Economy Arias Gomez, Helmuth

Yesid, Anto  lov  , Gabriela,2023-01-23 Economic activity is embedded in specific surroundings, and ultimately, these conditions determine productivity and efficiency. However, the use of space in the formal models has been troublesome, but in practical activity, the territory is a crucial determinant when the agents make

economic decisions. The interaction between economic activity, territory, and space has become a definitive bedrock in theories throughout the history of thought, such as location theory, urban economics, and new economic geography. Considerations of Territorial Planning, Space, and Economic Activity in the Global Economy analyzes the interaction between territory, economic activity, and human development, sharing interesting histories and deploying an extensive set of methodologies, places, and points of view. Covering key topics such as territorial planning, urban economics, and natural resources, this premier reference source is ideal for economists, policymakers, government officials, industry professionals, researchers, academicians, practitioners, scholars, instructors, and students.

Investment Decisions and the Logic of Valuation Carlo Alberto Magni, 2020-02-11 This book presents a new approach to the valuation of capital asset investments and investment decision-making. Starting from simple premises and working logically through three basic elements (capital, income, and cash flow), it guides readers on an interdisciplinary journey through the subtleties of accounting and finance, explaining how to correctly measure a project's economic profitability and efficiency, how to

assess the impact of investment policy and financing policy on shareholder value creation, and how to design reliable, transparent, and logically consistent financial models. The book adopts an innovative pedagogical approach, based on a newly developed accounting-and-finance-engineering system, to help readers gain a deeper understanding of the accounting and financial magnitudes, learn about new analytical tools, and develop the necessary skills to practically implement them. This diverse approach to capital budgeting allows a sophisticated economic analysis in both absolute terms (values) and relative terms (rates of return), and is applicable to a wide range of economic entities, including real assets and financial assets, engineering designs and manufacturing schemes, corporate-financed and project-financed transactions, privately-owned projects and public investments, individual projects and firms. As such, this book is a valuable resource for a broad audience, including scholars and researchers, industry practitioners, executives, and managers, as well as students of corporate finance, managerial finance, engineering economics, financial management, management accounting, operations research, and financial mathematics. It features more than 180 guided examples, 50 charts and figures and over 160

explanatory tables that help readers grasp the new concepts and tools. Each chapter starts with an abstract and a list of the skills readers can expect to gain, and concludes with a list of key points summarizing the content.

Vedanta without Maya? Godabarisha Mishra, 2015-01-01

Saptavidha-anupapatti represents a live-debate in the traditions of Vedanta initiated by Ramanujacarya. The central issue of this debate is to examine whether maya-avidya, postulated by Advaita-vedant, is philosophically sustainable, logically viable, and experientially reliable. While Sankara builds up the superstructure of Advaita on the basis of this concept, Ramanuja vociferously reacts to its philosophical ingenuity. This dispute between the Advaita and Visistadvaita schools with seven objections, which forms the manor theme of this book, has been going on for more than a millennium and is alive even today among Vedanta scholars. The volume contains, besides historical as well as philosophical explorations of the concept of maya-avidya, the arguments and counter arguments, formulation and counter-formulation to accommodate and reject the corresponding philosophical predilections of both the above schools by some of the preeminent philosophical minds of Indian philosophy of our

times.
