Human Interaction, Emerging Technologies and Future Systems V Tareq Ahram,Redha Taiar,2021-09-09 This book reports on research and developments in human-technology interaction. A special emphasis is given to human-computer interaction and its implementation for a wide range of purposes such as health care, aerospace, telecommunication, and education, among others. The human aspects are analyzed in detail. Timely studies on human-centered design, wearable technologies, social and affective computing, augmented, virtual and mixed reality simulation, human rehabilitation, and biomechanics represent the core of the book. Emerging technology applications in business, security, and infrastructure are also critically examined, thus offering a timely, scientifically grounded, but also professionally oriented snapshot of the current state of the field. Audio Content Security Sogand Ghorbani,Iraj Sadegh Amiri,2016-07-16 Audio Content Security: Attack Analysis on Audio Watermarking describes research using a common audio watermarking method for four different genres of music, also providing the results of many test attacks to determine the robustness of the watermarking in the face of those attacks. The results of this study can be used for further studies and to establish the need to have a particular way of audio watermarking for each particular group of songs, each with different characteristics. An additional aspect of this study tests and analyzes two parameters of audio host file and watermark on a specific evaluation method (PSNR) for audio watermarking. Describes research using a common audio watermarking method for

Storage Systems Alexander Thomasian, 2021-10-13 Storage Systems: Organization, Performance, Coding, Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive/Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips—with one strip per disk—and storage reliability is enhanced via replication or erasure coding, which at best dedicates k strips per stripe to tolerate k disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives (SSDs) replacing Hard Disk Drives (HDDs) for high performance applications. RAID and Flash have resulted in the emergence of new storage companies, namely EMC, NetApp, SanDisk, and Purestorage, and a multibillion-dollar storage market. Key new conferences and publications are reviewed in this book. The goal of the book is to expose students, researchers, and IT professionals to the more important developments in storage systems, while covering the evolution of storage technologies, traditional and novel databases, and novel sources of data. We describe several prototypes: FAWN at CMU, RAMCloud at Stanford, and Lightstore at MIT; Oracle's Exadata, AWS' Aurora, Alibaba's PolarDB, Fungible Data Center; and author's paper designs for cloud storage, namely heterogeneous disk arrays and hierarchical RAID. Surveys storage technologies and lists sources of data: measurements, text, audio, images, and video Familiarizes with paradigms to improve performance: caching, prefetching, log-structured file systems, and merge-trees (LSMs) Describes RAID organizations and analyzes their performance and reliability Conserves storage via data compression, deduplication, compaction, and secures data via encryption Specifies implications of storage technologies on performance and power consumption Exemplifies database parallelism for big data, analytics, deep learning via multicore CPUs, GPUs, FPGAs, and ASICs, e.g., Google's Tensor Processing Units

Music Learning Today William I. Bauer, 2020 At the beginning of Chapter 1, I quote author Arthur C. Clarke, who wrote Any sufficiently advanced technology is indistinguishable from magic (1984, p. 36). To me, technology has always been somewhat magical. Growing up I liked both magic tricks and electronic gadgets. When I was very young I remember being picked out of the audience by a magician to help him with a trick, thrilled with the seemingly mystical act that he accomplished with my assistance. I loved seeing magicians live or on TV, and I borrowed magic books from the local public library to learn tricks that I tried out on my family. As I became older and obtained various technological devices, they too fascinated me with the somewhat magical (to me) things they were able to do. Two items, in particular, stand out in my memory. I acquired an analog audio tape recorder that I used to play duets with myself by recording one part and then playing it back while performing the other part live. This made practicing my euphonium so much more fun and likely increased my practice time as I worked to record the perfect take of each line of the various duets I had in my books! I was also excited to receive a CB radio one Christmas, which allowed me to stay in close contact, at all times of the day and night, with my best friend who had received the same gift. It augmented my social network, such as it existed in those days. In addition, it was amazing to be able to use the radio to listen to and learn from the conversations picked out of the air of people from all over. Technology had magical qualities and I loved how it allowed me to do things that were otherwise not possible, as well as things that made life more interesting and enjoyable. I still feel the same way today. --
