Reliable Software Technologies - Ada-Europe 2001 Dirk Craeynest,Alfred Strohmeier,2003-06-29 The Sixth International Conference on Reliable Software Technologies, Ada- Europe 2001, took place in Leuven, Belgium, May 14-18, 2001. It was sponsored by Ada-Europe, the European federation of national Ada societies, in cooperation with ACM SIGAda, and it was organized by members of the K.U. Leuven and Ada- Belgium. This was the 21st consecutive year of Ada-Europe conferences and the sixth year of the conference focusing on the area of reliable software technologies. The use of software components in embedded systems is almost ubiquitous: planes fly by wire, train signalling systems are now computer based, mobile phones are digital devices, and biological, chemical, and manufacturing plants are controlled by software, to name only a few examples. Also other, non-embedded, mission-critical systems depend more and more upon software. For these products and processes, reliability is a key success factor, and often a safety-critical hard requirement. It is well known and has often been experienced that quality cannot be added to software as a mere afterthought. This also holds for reliability. Moreover, the reliability of a system is not due to and cannot be built upon a single technology. A wide range of approaches is needed, the most difficult issue being their purposeful integration. Goals of reliability must be precisely defined and included in the requirements, the development process must be controlled to achieve these goals, and sound development methods must be used to fulfill these non-functional requirements.

Ada-Europe '93 Michel Gauthier,1993-06-07 This volume contains the proceedings of the twelfth Ada-Europe conference, held in France in 1993. The French name Ada sans fronti res (the only French words in the book) symbolizes the unlimitedness and novelty of Ada, as well as Europe-wide interest. Many papers relate to Ada-9X, the new standard that the Ada community is close to achieving after worldwide consultation and debate about requirements, specification, and detailed definition. Their focus is on management, real-time, and compiler validation. Part of the conference was on object orientation, together with various issues relating to the general structure of the language, including exceptions to a certain use of genericity and heterogeneous data, efficiency, formal requirements and CASEs, and comparison with a competitor language. A third part relates to real-time,

past with performance measurement, present with certification and applications, and future with the ExTRA project and 9X.

Dragon Moon ID Johnson, Find the jewel, save the kingdom--and the dragons. Princess Nya Gould fears the Dragon Moon, the night each year when one young person in their kingdom is sacrificed to a dragon to keep him from destroying their lands. When it is her friend who is taken, she creates a plan to get him back. But when Nya discovers the dragon isn't feasting on the sacrifices and is actually using them to retrieve a missing jewel, one that can save his kind and restore his kingdom, she is torn between helping him and using this knowledge to the advantage of her own kingdom. It doesn't make things easier when she finds herself attracted to the dragon shifter when he's in his human form. Slate is a sexy beast of a man, with dark smoldering eyes and rippling muscles. Can he see her as anything more than the annoying, spoiled human princess who has infiltrated his lair? As Nya and Slate work together to find the jewel, their relationship grows, and Nya is left with a choice: Find the jewel and save the kingdom--or the dragon?

Harbour, Juan A. de la Puente, 2003-07-31 The Fourth International Conference on Reliable Software Technologies, Ada- Europe'99, took place in Santander, Spain, from June 7 to 11, 1999. It was sponsored by Ada Europe, the European federation of national Ada societies, in cooperation with ACM SIGAda and Ada Spain, and it was organized by members of the University of Cantabria and the Technical University of Madrid, in Spain. This was the 19th consecutive year of Ada Europe conferences, which have always been the main Ada events in Europe, with their counterparts being the ACM SIGAda conferences in the USA (formerly Tri Ada). The conference is not just devoted to the Ada language, but rather to the more general area of reliable software technologies. In this sense, there are papers on formal methods, testing, software architectures and design, software engineering tools, etc. We believe that the role of reliable software technologies is becoming increasingly important, as computer applications control more and more of our everyday systems. The goal of our conference is to contribute to advancing the state of the art of all the technologies that help us in achieving better and more reliable software at a lower overall cost.
