What could be better than spending time with these rare and wonderful creatures – after all, the fifth great ape on this planet is you! Back matter includes an index and a map.

The Ape in the Tree Alan Walker,Pat Shipman,2005 Detailing the unfolding discovery of a crucial link in our evolution, this book is written in the voice of Walker, whose involvement with Proconsul began when his graduate supervisor analyzed the tree-climbing adaptations in the arm and hand of this extinct creature. Today, Proconsul is the best-known fossil ape in the world.

Ape John Sorenson,2009-10-15 Apes—to look at them is to see a mirror of ourselves. Our close genetic relatives fascinate and unnerve us with their similar behavior and social personality. Here, John Sorenson delves into our conflicted relationship to the great apes, which often reveals as much about us as humans as it does about the apes themselves. From bonobos and chimpanzees to gibbons, gorillas, and orangutans, Ape examines the many ways these remarkable animals often serve as models for humans. Anthropologists use their behavior to help explain our fundamental human nature; scientists utilize them as subjects in biomedical research; and behavioral researchers experiment with ways apes emulate us. Sorenson explores the challenges to the complex division between apes and ourselves, describing language experiments, efforts to cross-foster apes by raising them as human children, and the ethical challenges posed by the Great Ape Project. As well, Ape investigates representations of apes in popular culture, particularly films and advertising in which apes are often portrayed as human caricatures, monsters, and clowns. Containing nearly one hundred illustrations of apes in nature and culture, Ape will appeal to readers interested in animal-human relationships and anyone curious to know more about our closest animal cousins, many of whom teeter on the brink of extinction.

The Ape in Antiquity William Coffman McDermott,1938

The Great Apes Chris Herzfeld,2017-11-14 A unique, beautifully illustrated exploration of our fascination with our closest primate relatives, and the development of primatology as a discipline This insightful work is a compact but wide-ranging survey of humankind's relationship to the great apes (chimpanzees, bonobos, gorillas, orangutans), from antiquity to the present. Replete with fascinating historical details and anecdotes, it traces twists and turns in our construction of primate knowledge over five hundred years. Chris Herzfeld outlines the development of primatology and its key players and events, including well-known long-term field studies, notably the pioneering work by women such as Jane Goodall, Dian Fossey, and Biruté Galdikas. Herzfeld seeks to heighten our understanding of great apes and the many ways they are like us. The reader will encounter apes living in human families, painting apes, apes who use American Sign Language, and chimpanzees who travelled in space. A philosopher and historian specializing in primatology, Herzfeld offers thought-provoking insights about our perceptions of apes, as well as the boundary between “human” and “ape” and what it means to be either.

The Great Ape Project Paola Cavalieri,Peter Singer,1996 With such assertions throughout, it is no wonder that The Great Ape Project has been embroiled in controversy even before its American publication.

Kanzi Sue Savage-Rumbaugh,1996-09-01 The remarkable story of a talking chimp, a leading scientist, and the profound insights they have uncovered about our species He has been featured in cover stories in Time, Newsweek, and National Geographic, and has been the subject of a NOVA documentary. He is directly responsible for discoveries that have forced the scientific community to recast its thinking about the nature of the mind and the origins of language. He is Kanzi, an extraordinary bonobo chimpanzee who has overturned the idea that symbolic language is unique to our species. This is the moving story of how Kanzi learned to converse with humans and the profound lessons he has taught us about our animal cousins, and ourselves. . . . The underlying thesis is informative and well argued . . . Savage-Rumbaugh's results are impressive. – The Washington Post This popular, absorbing, and controversial account is recommended. – Library Journal

Bonobo Frans B. M. Waal,Frans Lanting,1997 Bonobo provides a tantalizing introduction to the natural history of one of our closest living relatives and uniquely enhances our understanding of our own place in nature (Donald Johanson). How nice to have the peaceable, sexy bonobo added to the path of human evolution! Bonobos represent the silver lining in our ape heritage (Meredith Small). 75 color plates. 9 photos. 9 maps & drawings.

Last Ape Standing Chip Walter,2013-01-29 Over the past 150 years scientists have discovered evidence that at least twenty-seven species of humans evolved on planet Earth. These weren't simply variations on apes, but upright-walking humans who lived side by side, competing, cooperating, sometimes even mating with our direct ancestors. Why did the line of ancient humans who eventually evolved into us survive when the others were shown the evolutionary door? Chip Walter draws on new scientific discoveries to tell the fascinating tale of how our survival was linked to our ancestors being born more prematurely than others, having uniquely long and rich childhoods, evolving a new kind of mind that made us resourceful and emotionally complex; how our highly social nature increased our odds of survival; and why we became self aware in ways that no other animal seems to be. Last Ape Standing also profiles the mysterious others who evolved with us-the Neanderthals of Europe, the Hobbits of Indonesia, the Denisovans of Siberia and the just-discovered Red Deer Cave people of China who died off a mere eleven thousand years ago. Last Ape Standing is evocative science writing at its best-a witty, engaging and accessible story that explores the evolutionary events that molded us into the remarkably unique creatures we are; an investigation of why we do, feel, and think the things we do as a species, and as people-good and bad, ingenious and cunning, heroic and conflicted.

An Ape's View of Human Evolution Peter Andrews, 2016-01-07 Our closest living relatives are the chimpanzee and bonobo. We share many characteristics with them, but our lineages diverged millions of years ago. Who in fact was our last common ancestor? Bringing together ecology, evolution, genetics, anatomy and geology, this book provides a new perspective on human evolution. What can fossil apes tell us about the origins of human evolution? Did the last common ancestor of apes and humans live in trees or on the ground? What did it eat, and how did it survive in a world full of large predators? Did it look anything like living apes? Andrews addresses these questions and more to reconstruct the common ancestor and its habitat. Synthesising thirty-five years of work on both ancient environments and fossil and modern ape anatomy, this book provides unique new insights into the evolutionary processes that led to the origins of the human lineage.

The Aquatic Ape Hypothesis Elaine Morgan, 2011-03-01 Why do humans differ from other primates? What do those differences tell us about human evolution? Elaine Morgan gives a revolutionary hypothesis that explains our anatomic anomalies: why we walk on two legs, why we are covered in fat, why we can control our rate of breathing? The answers point to one conclusion: millions of years ago our ancestors were trapped in a semi-aquatic environment. In presenting her case Elaine Morgan forces scientists to question accepted theories of human evolution.

Industrial Agriculture and Ape Conservation Arcus Foundation, 2015-12-17 Presents new research and analysis along with case studies to examine the interface between ape conservation and industrial agriculture. This title is available as Open Access.

The Ape And The Sushi Master Frans De Waal, 2008-08-05 From the New York Times bestselling author of *Mama's Last Hug* and *Are We Smart Enough to Know How Smart Animals Are?*, a provocative argument that apes have created their own distinctive cultures In *The Ape and the Sushi Master*, eminent primatologist Frans de Waal corrects our arrogant assumption that humans are the only creatures to have made the leap from the natural to the cultural domain. The book's title derives from an analogy de Waal draws between the way behavior is transmitted in ape society and the way sushi-making skills are passed down from sushi master to apprentice. Like the apprentice, young apes watch their group mates at close range, absorbing the methods and lessons of each of their elders' actions. Responses long thought to be instinctive are actually learned behavior, de Waal argues, and constitute ape culture. A delightful mix of intriguing anecdote, rigorous clinical study, adventurous field work, and fascinating speculation, *The Ape and the Sushi Master* shows that apes are not human caricatures but members of our extended family with their own resourcefulness and dignity.

Killing, Capture, Trade and Ape Conservation Arcus Foundation, 2021-04-29 An objective analysis of relevant issues and case studies to further the ape conservation agenda around killing, capture and trade.

The Artificial Ape Timothy Taylor, 2010-07-20 A breakthrough theory that tools and technology are the real drivers of human evolution Although humans are one of the great apes, along with chimpanzees, gorillas, and orangutans, we are remarkably different from them. Unlike our cousins who subsist on raw food, spend their days and nights outdoors, and wear a thick coat of hair, humans are entirely dependent on artificial things, such as clothing, shelter, and the use of tools, and would die in nature without them. Yet, despite our status as the weakest ape, we are the masters of this planet. Given these inherent deficits, how did humans come out on top? In this fascinating new account of our origins, leading archaeologist Timothy Taylor proposes a new way of thinking about human evolution through our relationship with objects. Drawing on the latest fossil evidence, Taylor argues that at each step of our species' development, humans made choices that caused us to assume greater control of our evolution. Our appropriation of objects allowed us to walk upright, lose our body hair, and grow significantly larger brains. As we push the frontiers of scientific technology, creating prosthetics, intelligent implants, and artificially modified genes, we continue a process that started in the prehistoric past, when we first began to extend our powers through objects. Weaving together lively discussions of major discoveries of human skeletons and artifacts with a reexamination of Darwin's theory of evolution, Taylor takes us on an exciting and challenging journey that begins to answer the fundamental question about our existence: what makes humans unique, and what does that mean for our future?
