Written by a team of highly experienced computer security experts, the handbook provides hands-on tutorials exploring a range of current attack methods. The web browser has become the most popular and widely used computer program in the world. As the gateway to the Internet, it is part of the storefront to any business that operates online, but it is also one of the most vulnerable entry points of any system. With attacks on the rise, companies are increasingly employing browser-hardening techniques to protect the unique vulnerabilities inherent in all currently used browsers. The Browser Hacker's Handbook thoroughly covers complex security issues and explores relevant topics such as: Bypassing the Same Origin Policy ARP spoofing, social engineering, and phishing to access browsers DNS tunneling, attacking web applications, and proxying—all from the browser Exploiting the browser and its ecosystem (plugins and extensions) Cross-origin attacks, including Inter-protocol Communication and Exploitation The Browser Hacker's Handbook is written with a professional security engagement in mind. Leveraging browsers as pivot points into a target's network should form an integral component into any social engineering or red-team security assessment. This handbook provides a complete methodology to understand and structure your next browser penetration test.

Cross-Curricular Teaching and Learning in the Secondary School... The Arts Martin Fautley, Jonathan Savage, 2010-12-02 The school curriculum is a contested arena. There are competing pressures from those who advocate that it should be constructed on a subject specific basis, whereas at the other end of the continuum is the stance taken by this book, that learning, and especially learning in the arts, can transcend artificial boundaries between subjects. This book sets out a case for cross-curricular learning involving the arts in secondary schools. Cross-Curricular Teaching and Learning in the Secondary School... The Arts argues for the development of a new, skilful pedagogy which embeds an authentic, cross-curricular approach to teaching and learning in the work of the individual teacher. Teachers are empowered to think about creative pedagogies, and pupils are able to engage in deep learning as a result. Key features of the text include: theoretical examination of key issues curriculum planning materials and resources a wide range of case studies drawn from innovative practice frameworks for assessment and evaluation. Part of the Cross-Curricular Teaching and Learning in the Secondary School series, this textbook breaks the boundaries between curriculum subjects and the arts. It is timely reading for all students on Initial Teacher Training courses as well as practising teachers looking to introduce cross-curricular themes in their own subjects.

Innovative Internet Secrets Doug Knell, 2018-01-11 There are so many secrets packed in here, I have to wonder if the Illuminati will have this author assassinated - Derrick Mennings, Marxist Internet Weekly Digest Written by an engineering expert with comprehensive knowledge of SEO marketing, computers, and the best Belgian beers to drink with them. Preview the book to enter enlightenment. Give Me A Couple Of Hours And I'll Turn You Into An Internet Wizard! There are other internet secrets books and they work as excellent paperweights and have some therapeutic benefits, too: you can use them to put you to sleep. This book is not to be equated with all those boring-as-all-hell books with dubious internet insights and SEO tips. Trust us: what you know about the internet isn't as much as you think you know. Beyond the basics, how clued in are you really about the internet? You probably know more about Bangladesh (which ain't much, right?) than you do about web development, link building, and search engine optimization. The internet may play an integral role in our lives, yet in informal testing, close to 92% of internet users scored no more than basic competence with it. Less than 16% had any legitimate knowledge of SEO marketing. I can hear you from here: Basic competence is good enough for me. Why would I want or need to do more than that? You can use the Google or Bing search engine (but lazily, not with any genuine optimization), get around the Gmail and Hotmail interfaces, buy an airline ticket at Expedia, order a book at Amazon, and post an update at Facebook. Is that mastery when anyone can do that? Complacency never does anyone any favors. If the complacent had won out, we'd still believe the world is flat and airplane flight is impossible. Do you really need to be told that the internet is one of those things you cannot afford to be complacent about? Your livelihood, your identity, your social networks, your ability to distinguish yourself from the competition will all one day be measured by the breadth and depth of your internet skills. Development of the web hasn't stood still. Should your skills? Every single one of these internet secrets will shoot your internet productivity into the stratosphere and leave you head and shoulders above your peers. We're not naive to think you don't know any of these secrets, but we're confident you don't know about most of them. Any of these 100+ internet insights will more than make up for the book's cost * Keep your computer and other devices protected: the best anti-virus & malware tools internet tools you should install to keep your computer, mobile phone, and tablet from being crippled. * Set up sharable internet networks wherever you happen to be, like standing in front of Buckingham Palace. * Start building your favorite link bookmarks across all internet browsers and platforms. * Avoid internet scams. * Download and view internet videos offline. Video streaming sucks bandwidth from your 4G plan. * Keep your identity safe. * Transfer large files. * Set

up online music libraries so you can listen to your music anywhere, anytime. * Shop on the internet for the absolute best prices. * View web sites optimally on any device. * Remember your passwords for any site and situation. * And much, much more. Some of these internet secrets you could discover if you knew where to look, but it would take you months to collect the same knowledge you'll find here. Other internet tools we've picked up from years of experience. You won't find those gems anywhere else. Dump your other SEO books and for-idiots web development guides. You will not find another internet book this practical or enjoyable for any price. The new internet isn't going anywhere, but you should. Let's get going, with us as your guide along this infinitely more diverse Information Superhighway.

Research and Advanced Technology for Digital Libraries Christos Nikolaou, Constantine Stephanidis, 2003-07-31 Digital Libraries are complex and advanced forms of information systems which extend and augment their physical counterparts by amplifying existing resources and services and enabling development of new kinds of human problem solving and expression. Their complexity arises from the data-rich domain of discourse as well as from extended demands for multi-disciplinary input, involving distributed systems architectures, structured digital documents, collaboration support, human-computer interaction, information filtering, etc. In addition to the broad range of technical issues, ethics and intellectual property rights add to the complication that is normally associated with the development, maintenance, and use of Digital Libraries. The Second European Conference on Digital Libraries (ECDL'98) builds upon the success of the first of this series of European Conferences on Research and Advanced Technology for Digital Libraries, held last year in Pisa, Italy, September 1-3, 1997. This series of conferences is partially funded by the TMR Programme of the European Commission and is actively supported and promoted by the European Research Consortium on Informatics and Mathematics (ERCIM). The aim is to bring together the different communities involved in the development of Digital Libraries, to review progress and to discuss strategies, research and technological development (RTD) issues, as well as specific topics related to the European context. These communities include professionals from universities, research centres, industry, government agencies, public libraries, etc.
