*The Art of Comparison* Catherine Brown,2020-09-30 Comparison underlies all reading. Readers compare words to words, and books to all the other books which they have read. Some books, however, demand a particular comparative effort - for example, novels which contain parallel plot lines. In this ambitious and important study Catherine Brown compares Daniel Deronda with Anna Karenina and Women in Love in order to answer the following questions: why does one protagonist in each novel fail whilst another succeeds? Can their failure and success be understood on the same terms? How do the novels' uses of comparison compare to each other? How relevant is George Eliot's influence on Lev Tolstoi, and Tolstoi's on D. H. Lawrence? Does Tolstoi being a Russian make this a 'comparative' literary study? And what does the 'comparative' in 'comparative literature' actually mean? Criticism is combined with metacriticism, to explore how novels and critics compare. Book jacket.

Comparisonitis Melissa Ambrosini,2021-05-11 2022 NATIONAL INDIE EXCELLENCE AWARDS WINNER — SELF-HELP: GENERAL • BEST INDIE BOOK AWARD WINNER — SELF-HELP Multiple bestselling author Melissa Ambrosini (Mastering Your Mean Girl, Open Wide, PurposeFULL) and host of the #1 podcast The Melissa Ambrosini Show puts the condition of Comparisonitis under the microscope, unpacking the symptoms, and offering practical tips you can start using immediately to break the cycle of comparison, free up mental bandwidth, and live life on your own terms. When you cure Comparisonitis, you will... • Be free to live your life for you (no one else) • Feel peace from within • Experience genuine happiness • Truly appreciate your body and life • Free up SO much mental bandwidth for things you LOVE • Quit beating yourself up • Have more energy to go after the things that truly matter to you • Experience a radical shift towards authenticity • Be a better friend, partner, parent, family member, colleague, human • Free yourself from expectations • Unleash the courage to go after your dreams • Unstifle your creativity • Feel more liberated than you've ever felt in your life • And much more It creeps up on you without warning—perhaps while chatting with a friend, scrolling through social media, or even just while walking down the street. All it takes is the hint of someone doing or having something you perceive as better than you, and it hits. A feeling takes over—intense, blinding, gutting. Your brain starts spinning with toxic thoughts about yourself (or others), and you're left feeling ashamed, guilty, and even worthless. It's called comparisonitis. And if you've suffered from it, you're NOT alone. Comparisonitis is a contagious, socially transmitted condition that occurs when you compare yourself to others so frequently and fiercely that you're left paralyzed, with your confidence in tatters and your self-worth plummeting. It may sound trivial, but this affliction can have serious adverse effects on our mental health, leading to depression, anxiety, overthinking, and regret. To make matters worse, our comparison culture is only expanding. Thanks to social media, we have more opportunities to compare ourselves than ever before, and even kids are falling into the trap. Described as a self-help guru by Elle magazine, Melissa has experienced the effects of comparisonitis first hand, having worked extensively in industries like acting, modeling and dancing where comparison culture is not only rampant but openly encouraged. Melissa knows all too well how comparisonitis is infecting our minds and hurting our hearts, and in this book, she'll help you heal from this disease, liberate your headspace, and raise your self-worth so radically that you'll never let comparison rob you of your joy and happiness again.

*Comparing Cell Culture and Mouse Assays for Measuring Infectivity of Cryptosporidium* Paul A. Rochelle,Marilyn M. Marshall,J. Mead,JS Rosen,2005-06-30 Cell culture techniques are routinely used for measuring the infectivity of a wide range of human pathogens. A variety of different cell culture systems and detection methodologies have been applied to *Cryptosporidium parvum*. However, the correlation between cell culture methods and animal infectivity assays has not been thoroughly investigated. Although many cell culture methods have been developed for *C. parvum*, it has not been proven that infectivity in cell culture is a good indicator of the ability of oocysts to cause infections in animals. The objective of this research was to compare in-vitro cell culture methods with a mouse assay for measuring infectivity of *C. parvum* oocysts. The specific objectives were to (1) compare the dose response and sensitivity of cell culture and mouse assays with multiple isolates; (2) compare infectivity methods with oocysts exposed to environmental water samples; (3) determine the reproducibility and variability of the methods; and (4) compare cell culture and animal assays for assessing ozone and UV disinfection. For untreated oocysts, challenge doses were enumerated by flow cytometry. Dose response curves were constructed by regression analysis of oocyst dose against a logistic transformation of the proportional infectivity and the 50% infectious doses for each isolate were calculated by solving the regression for a logit value of zero. Infections in CD-1 mice were detected by microscopy following staining with hematoxylin and eosin. Infection in HCT-8 and Caco-2 cells was detected by *C. parvum*-specific RT-PCR. In MDCK cells, infection was detected using immunofluorescence. For disinfection studies, oocysts were exposed to UV using a medium-pressure, collimated beam apparatus and inactivation was measured as the difference in ID50 of unexposed and UV-exposed oocysts. Oocysts were exposed to ozone using batch, semi-batch, and single continuously stirred tank reactors at 1, 5, and 15°C. This investigation demonstrated that in-vitro cell culture was equivalent with a mouse assay for measuring infectivity of untreated *C. parvum* oocysts and should therefore be considered a practical alternative for assessing the potential of oocysts to cause infection. However, the high levels of variability displayed by mouse and cell culture methods indicated that infectivity and disinfection experiments should be limited to discerning relatively large differences. Of the three cell culture assays, the HCT-8/RT-PCR method displayed the closest agreement with the CD-1 mouse assay. *C. hominis* was infectious in HCT-8 cells but did not infect mice. Similar results were obtained with CD-1 mice and HCT-8 cells for measuring infectivity of oocysts that had been exposed to environmental water for 35 days. There was also very good agreement between HCT-8 cell culture and CD-1 mouse assays for measuring UV inactivation of *C. parvum*. A medium-pressure UV dosage of 5.6 mJ/cm<sup>2</sup> resulted in 2-log<sub>10</sub> inactivation. The shapes of ozone inactivation curves were generally the same for mouse and cell culture derived data although the CD-1 mouse assay typically generated 0.5 to 1-log<sub>10</sub> higher levels of inactivation than HCT-8 cells. In addition, there was a stimulatory response in oocysts exposed to ozone below 20 mg.min/L when assayed by HCT-8 cell culture. Consequently, further research is necessary to understand the response of oocysts to ozone when inactivation is assessed by cell culture methods. The water industry should adopt in-vitro cell culture as a routine method for measuring the infectivity of waterborne *C. parvum* and *C. hominis* oocysts. This project has demonstrated that cell culture has equivalency with the standard CD-1 mouse assay and cell culture assays can be applied to oocysts recovered from water using approved methods. However, there needs to be a thorough, robust, and well-controlled study to compare the various cell culture-based assays for measuring *C. parvum* and *C. hominis* infectivity. This evaluation should include inter-laboratory comparisons and round-robin testing. Cell culture-based assays should also be used to assess disinfection of *C. hominis* isolates.
