Head First Programming David Griffiths,Paul Barry,2009-11-16 Looking for a reliable way to learn how to program on your own, without being overwhelmed by confusing concepts? Head First Programming introduces the core concepts of writing computer programs -- variables, decisions, loops, functions, and objects -- which apply regardless of the programming language. This book offers concrete examples and exercises in the dynamic and versatile Python language to demonstrate and reinforce these concepts. Learn the basic tools to start writing the programs that interest you, and get a better understanding of what software can (and cannot) do. When you're finished, you'll have the necessary foundation to learn any programming language or tackle any software project you choose. With a focus on programming concepts, this book teaches you how to:

- Understand the core features of all programming languages, including: variables, statements, decisions, loops, expressions, and operators
- Reuse code with functions
- Use library code to save time and effort
- Select the best data structure to manage complex data
- Write programs that talk to the Web
- Share your data with other programs
- Write programs that test themselves and help you avoid embarrassing coding errors

We think your time is too valuable to waste struggling with new concepts. Using the latest research in cognitive science and learning theory to craft a multi-sensory learning experience, Head First Programming uses a visually rich format designed for the way your brain works, not a text-heavy approach that puts you to sleep.

The Control Data Corporation's Early Systems Stephen H. Kaisler,2023-08-08 This book is the eighth volume in the Historical Computing Machines series, which aims to document the history of computing machines from the late 1930s up to about 1995. It is focused on the Control Data Corporation's early systems which reflected the design principles espoused by Seymour Cray. CDC developed and sold early machines as fast processors for use in scientific and engineering organizations. CDC's early systems were batch-oriented and minimalist in their instruction sets. This volume covers the early CDC systems - from the CDC 160 through the CDC 3800 - in the evolution of computer architectures in the pursuit of fast computers, and describes their system software, their effect on programming language designs, and key applications. It also describes the later CDC 1700 and its successors, the Cyber 17/18 series of minicomputers. As such, this volume strives to bring together a comprehensive, but not exhaustive, view of the capabilities of early CDC computer systems.

Learn PHP in 24 Hours Alex Nordeen,2020-09-15 PHP is a versatile language based on object-oriented programming concept. It is practiced by a huge community. PHP is the

least complex and makes better applications if used in the right context. It supports some great frameworks like Zend, Laravel, and Symfony. Most beginners find PHP difficult because they either spend a long time learning all the things, or they are using poorly crafted online courses. To make PHP easier to learn, we extracted some niche topic of PHP and compiled them in simple to understand format in this small e-book. On top of it, the examples are made more interactive to help understand some advanced PHP topics. The best part of this e-book is the price is almost negligible. With this edition, beginners will learn to interpret PHP language in the nick of time. They will be able to build a basic application on HTML, CSS, etc. without any peer guidance or external course. All the major concepts of PHP are covered in this e-book. Once you know the tips and tricks, the book can be a guide for building Web-based services for mobile devices. You will be able to gain more knowledge about PHP functions and MySQL through it. Besides having limited coding language, you will become someone having a deeper understanding of PHP in no time. With this e-book, you soon can become the part of these huge base of PHP users like Facebook, Yahoo, Wikipedia, Wordpress, and so on.

Tools to Try Cards for Kids Leah Kuypers, Elizabeth Sautter, 2021-01-26 Learning to self-regulate our Zones is hard, serious work that takes time and lots of practice. Tools to Try Cards for Kids is an easy, user-friendly way to help kids ages 5-10 metacognitively explore and practice over 50 self-regulation strategies and empower them to make choices toward figuring out what works best for them. The two-sided strategy cards are divided into five color-coded categories to show how the tools work in different ways to help social emotional learners self-regulate their feelings and emotions: · FEEL IT. These tools use our senses to support regulation and modulation. · MOVE IT. These tools integrate physical activity to impact regulation and reduce anxiety. · THINK IT. These tools provide thought-based strategies to help us regulate. · DO IT. Task and goal-oriented tools involve taking action. · CONNECT. Co-regulation tools encourage empathy, thinking of others, and accessing relationships for support. Each strategy card displays an illustration of the self-regulation tool performed by inclusive characters on one side and a how-to-do-it description on the reverse. Each card also includes a reflection to help kids consider how they feel after using the tool, how it can be used to help them regulate their Zones, and whether it's the right tool for them. For best teaching practice, the strategy deck should be used in tandem with Chapter 4 lessons in The Zones of Regulation curriculum book. The cards are also useful tools when paired with other Zones-related products, such as Navigating The Zones, and the Advanced Pack: Cards to Extend Play with Navigating The Zones. This card deck is a supplement to, not a replacement for, the in-depth curriculum and lessons in The Zones of Regulation book.

XML and Web Technologies for Data Sciences with R Deborah Nolan, Duncan Temple Lang, 2013-11-29 Web technologies are increasingly relevant to scientists working with data, for both accessing data and creating rich dynamic and interactive displays. The XML and JSON data formats are widely used in Web services, regular Web pages and JavaScript code, and visualization formats such as SVG and KML for Google Earth and Google Maps. In addition, scientists use HTTP and other network protocols to scrape data from Web pages, access REST and SOAP Web Services, and interact with NoSQL databases and text search applications. This book provides a practical hands-on introduction to these technologies, including high-level functions the authors have developed for data scientists. It describes strategies and approaches for extracting data from HTML, XML, and JSON formats and how to programmatically access data from the Web. Along with these general skills, the authors illustrate several applications that are relevant to data scientists, such as reading and writing spreadsheet documents both locally and via Google Docs, creating interactive and dynamic visualizations, displaying spatial-temporal displays with Google Earth, and generating code from descriptions of data structures to read and write data. These topics demonstrate the rich possibilities and opportunities to do new things with these modern technologies. The book contains many examples and case-studies that readers can use directly and adapt to their own work. The authors have focused on the integration of these technologies with the R statistical computing environment. However, the ideas and skills presented here are more general, and statisticians who use other computing environments will also find them relevant to their work. Deborah Nolan is Professor of Statistics at University of California, Berkeley. Duncan Temple Lang is Associate Professor of Statistics at University of California, Davis and has been a member of both the S and R development teams.
