Crab Wars William Sargent,2014-07-22 Surviving almost unmolested for 300 million years, the horseshoe crab is now the object of an intense legal and ethical struggle involving marine biologists, environmentalists, US government officials, biotechnologists, and international corporations. The source of this friction is the discovery 25 years ago that the blood of these ancient creatures serves as the basis for the most reliable test for the deadly and ubiquitous gram-negative bacteria. These bacteria are responsible for life-threatening diseases like meningitis, typhoid, E. coli, Legionnaire's Disease and toxic shock syndrome. Because every drug certified by the FDA must be tested using the horseshoe crab derivative known as Limulus lysate, a multimillion dollar industry has emerged involving the license to bleed horseshoe crabs and the rights to their breeding grounds. Since his youthful fascination with these ancient creatures, William Sargent has spent much of his life observing, studying, and collecting horseshoe crabs. As a result, he presents a thoroughly accessible insider's guide to the discovery of the lysate test, the exploitation of the crabs at the hands of multinational pharmaceutical conglomerates, local fishing interests, and the legal and governmental wrangling over the creatures' ultimate fate. In the end, the story of the horseshoe crab is a sobering reflection on the unintended consequences of scientific progress and the danger of self-regulated industries controlling a limited natural resource.

Walking Sideways Judith S. Weis,2012-10-23 The world's nearly 7,000 species of crabs are immediately recognizable by their claws, sideways movement, stalked eyes, and thick outer shells. These common crustaceans are found internationally, thriving in various habitats from the edge of the sea to the depths of the ocean, in fresh water or on land. Despite having the same basic body type as decapod crustaceans--true crabs have heavy exoskeletons and ten limbs with front pincer claws--crabs come in an enormous variety of shapes and sizes, from the near microscopic to the giant Japanese spider crab. In *Walking Sideways*, Judith S. Weis provides an engaging and informative tour of the remarkable world of crabs, highlighting their unique biology and natural history. She introduces us to recently discovered crabs such as the Yeti crab found in deep sea vents, explains what scientists are learning about blue and hermit crabs commonly found at the shore, and gives us insight into the lifecycles of the king and Dungeness crabs typically seen only on dinner plates. Among the topics Weis covers are the evolution and classification of crabs, their habitats, unique adaptations to water and land, reproduction and development, behavior, ecology, and threats, including up-to-date research. Crabs are of special interest to biologists for their communication behaviors, sexual dimorphism, and use of chemical stimuli and touch receptors, and Weis explains the importance of new scientific discoveries. In addition to the traditional ten-legged crabs, the book also treats those that appear eight-legged, including hermit crabs, king crabs, and sand crabs. Sidebars address topics of special interest, such as the relationship of lobsters to crabs and medical uses of compounds derived from horseshoe crabs (which aren't really crabs). While Weis emphasizes conservation and the threats that crabs face, she also addresses the use of crabs as food (detailing how crabs are caught and cooked) and their commercial value from fisheries and aquaculture. She highlights other interactions between crabs and people, including keeping hermit crabs as pets or studying marine species in the laboratory and field. Reminding us of characters such as The Little Mermaid's Sebastian and Sherman Lagoon's Hawthorne, she also surveys the role of crabs in literature (for both children and adults), film, and television, as well in mythology and astrology. With illustrations that offer delightful visual evidence of crab diversity and their unique behaviors, *Walking Sideways* will appeal to anyone who has encountered these fascinating animals on the beach, at an aquarium, or in the kitchen.

The Happy Crab Layla Palmer, Kevin Palmer,2021-10-12 Happy is an adventurous little crab whose world is suddenly turned upside down (literally!) when a mama and her son discover his large, unbroken shell while on vacation at the beach. After deciding to keep the shell as a souvenir, the boy unexpectedly feels the crab move inside and is suddenly faced with a decision: take him home or let him go. His compassion for the crab and thoughtful decision to release him gently reminds readers of the importance of selflessness and highlights how our environment, relationships, and experiences contribute greatly to our happiness. The Happy Crab is based on a true story experienced by Kevin, Layla, and their son, Steevenson, and you can see a video of the actual shell and crab at TheLetteredCottage.net/TheHappyCrab.

In *Crab*, Cynthia Chris reveals that these charming creatures are social by nature, creative problem-solvers, and invaluable members of the environments in which they live. Their formidable physical forms, their hard-to-harvest and quick-to-spoil flesh, and their sassy demeanor have inspired artists and writers from Vincent van Gogh to Jean-Paul Sartre. Clumsy Crab Ruth Galloway,2018-09-01 Nipper doesn't like his huge, clumsy claws. They are no use at all and they just get in the way. Empires of the Crab Dale Cathell,2006-04-21 Early in the last century a boy, Ivy Flowers, swam across Tar Bay to Hoopers Island to see a girl. In time, Shirley Flowers was born of the union that began with that swim. During the same period, Captain Augustus Elsworth Phillips, Jr. was the captain of the cargo schooner, McCready. In her aft-cabin a boy, Brice Phillips would be conceived. Brice Phillips and Shirley Flowers would marry and have two sons, Steve and Jeffrey. With the family's Hoopers Island packing plant as a base, the Phillips would create a worldwide empire based upon their relationship with the crab. This is the story of that family.
