Graphic Design on the Desktop Marcelle Lapow Toor,1998-08-25 The complete and user-friendly introduction to graphic design--in a new edition Now with information on Web site design, plus examples, exercises, and more! Today, anyone with a good basic computer setup can produce a newsletter or a Web page--but to create effective, professional-quality pieces that stand out from the competition, you need more than a hard drive and some decent software. You need an understanding of how visual communication works and a solid grasp of the principles of design, composition, and typography. You need *Graphic Design on the Desktop*. Written specifically for those who have little or no design background or experience, this accessible guide teaches you the fundamentals of sound graphic design and gives you the practical know-how to put them to work on your own projects, from initial concept through final production. This new edition covers every key element of the design process, including format, layout and page design, typesetting, color, and illustrations--and offers clear explanations of type terminology, printing terms, and more. It guides you step-by-step through the design and production of ads, posters, brochures, and other promotional materials, as well as newsletters and magazines. A separate chapter on designing for the Web helps you make the most of home page and Web site designs. Complete with helpful examples, exercises, hints, and checklists, plus tips on common pitfalls and how to avoid them, *Graphic Design on the Desktop* is the ideal design partner for projects that get attention and get results.

Linux Desktop Pocket Guide David Brickner, 2005-09-23 While Mac OS X garners all the praise from pundits, and Windows XP attracts all the viruses, Linux is quietly being installed on millions of desktops every year. For programmers and system administrators, business users, and educators, desktop Linux is a breath of fresh air and a needed alternative to other operating systems. The Linux Desktop Pocket Guide is your introduction to using Linux on five of the most popular distributions: Fedora, Gentoo, Mandriva, SUSE, and Ubuntu. Despite what you may have heard, using Linux is not all that hard. Firefox and

Konqueror can handle all your web browsing needs; GAIM and Kopete allow you to chat with your friends on the AOL, MSN, and Yahoo! networks; and the email programs Evolution and Kontact provide the same functionality as Microsoft Outlook, with none of the cost. All of these programs run within the beautiful, feature-packed, and easy-to-use GNOME or KDE desktop environments. No operating system truly just works, and Linux is no exception. Although Linux is capable of running on most any computing hardware that Microsoft Windows can use, you sometimes need to tweak it just a little to make it work the way you really want. To help you with this task, Linux Desktop Pocket Guide covers essential topics, such as configuring your video card, screen resolution, sound, and wireless networking. And laptop users are not left out--an entire section is devoted to the laptop issues of battery life, sleep, and hibernate modes.

**Fab** Neil Gershenfeld,2008-07-31 What if you could someday put the manufacturing power of an automobile plant on your desktop? It may sound far-fetched-but then, thirty years ago, the notion of personal computers in every home sounded like science fiction. According to Neil Gershenfeld, the renowned MIT scientist and inventor, the next big thing is personal fabrication -the ability to design and produce your own products, in your own home, with a machine that combines consumer electronics with industrial tools. Personal fabricators (PF's) are about to revolutionize the world just as personal computers did a generation ago. PF's will bring the programmability of the digital world to the rest of the world, by being able to make almost anything-including new personal fabricators. In FAB , Gershenfeld describes how personal fabrication is possible today, and how it is meeting local needs with locally developed solutions. He and his colleagues have created fab labs around the world, which, in his words, can be interpreted to mean a lab for fabrication, or simply a fabulous laboratory. Using the machines in one of these labs, children in inner-city Boston have made saleable jewelry from scrap material. Villagers in India used their lab to develop devices for monitoring food safety and agricultural engine efficiency. Herders in the Lyngen Alps of northern Norway are developing wireless networks and animal tags so that their data can be as nomadic as their animals. And students at MIT have made everything from a defensive dress that protects its wearer's personal space to an alarm clock that must be wrestled into silence. These experiments are the vanguard of a new science and a new era-an era of post-digital literacy in which we will be as familiar with digital fabrication as we are with the of information processing. In this groundbreaking book, the scientist pioneering the revolution in personal fabrication reveals exactly what is being done, and how. The technology of FAB will allow people to create the objects they desire, and the kind of world they want to live in.

**The VDI Delusion** Brian S. Madden,Gabe Knuth,Jack Madden,2012-05-10 This book recounts the original promise of VDI (virtual desktop infrastructure) and why the reality fell short. It shows how to step back and figure out what problems we're really trying to solve, including when it makes sense to use desktop virtualization and VDI and when to stay with traditional desktops, and closes with a look at the world beyond Windows and what real steps we can take today to create the future enterprise desktop.
