Virtual Infrastructure is at the forefront of a rapidly growing server virtualization field. This configuration guide is intended to augment existing documentation by presenting two particular use cases for Virtual Infrastructure and ESX Server, and by discussing specific security and configuration guidance for each.

⬚ **VMware ESX Server** Ron Oglesby,Scott Herold,2005 Detailing the design and deployment of a VMware ESX Server environment, and written from the practical experience of proven VMware engineers, this book provides IT architects with the insight needed to tackle tough design issues such as ESX Server security, network and SAN design, host hardware selection, guest selection and configuration, management tool selection, ESX performance optimizations, and automated installs and provisioning. A linear progression is provided, starting at the basic architecture of ESX server and then moving on to server configurations, design alternatives for hardware, SAN configuration and management tools, the creation of guest operating systems, and strategy development for implementing this technology into a specific environment. Advanced topics such as unattended installs, integration with network management software, configuration options for high availability, and disaster recovery scenarios are also addressed.

⬚ ESX-1: A Novel Alternative Secretion System in Mycobacterium Tuberculosis that Mediates the Host-pathogen Interaction Sarah A. Stanley,2006 Mycobacterium tuberculosis is one of the world's most successful pathogens, infecting approximately one-third of humanity. This remarkable bacterium has infected human beings for millennia, and has evolved mechanisms for the manipulation of host biology to create an optimal environment for bacterial survival and growth. Here we describe the identification and characterization of ESX-1, the first alternative secretion system identified in M. tuberculosis, and show its fundamental importance for virulence. We have identified three genes, Rv3870, Rv3871, and Rv3877, that encode components of the ESX-1 secretion system, which functions to secrete ESAT-6 and CFP-10, proteins with dual functions as immunodominant antigens and virulence factors. Components and substrates of ESX-1 are required for full virulence of M. tuberculosis in both mice and macrophages. The ESX-1 secretion system functions to subvert host cell biology, and is required for the suppression of Interleukin-12 (IL-12) and Tumor Necrosis Factor-alpha (TNF-alpha). ESX-1 is also required for the induction, both in vivo and in vitro, of type I Interferons (IFNs), cytokines usually associated with an anti-viral immune response. We show that the induction of type I IFNs may be a pathogenic strategy that enhances virulence of M. tuberculosis. We also examine the role of the ESAT-6 and CFP-10 in the protective immune response in M. tuberculosis. We find that restoration of a functional ESX-1 system to the live attenuated vaccine strain mycobacterium Bacille Calmette-Guerin results in an increase in immunogenicity of this strain, which may lead to the development of more a more effective vaccine. These studies identify ESX-1 mediated secretion of ESAT-6 and CFP-10 to one of the most important pathways identified in M. tuberculosis, both for virulence of the organism and for induction of the protective immune response to infection, and begin to describe the mechanisms by which ESX-1 secretion regulates host biology and the outcome of infection.

⬚ Analysis of a Causal Role for ESX in Human Breast Cancer ,2003 A growing body of evidence supports an oncogenic role for the ETS transcription factor ESX in breast cancer. ESX over-expression is detected in human breast cancer tissues and we have previously reported that the ESX- negative and nontransformed human breast cell line, MCF-12A, is transformed by stable ESX expression. In our current sndies, we identify a unique 50-amino acid ESX domain, the SAR domain, that is sufficient to transform MCF-12A cells and whose transforming function is mediated by a novel cytoplasmic mechanism. Indeed, deletion of domains required for transcription factor function do not abrogate ESX-mediated MCF-12A cell transformation, whereas fusion of the SV40 large T antigen nuclear localization signal to either full-length ESX or to the ESX SAR domain alone blocked their transforming functions. Further, we find that ESX expression in transiently transfected cells is initially nuclear and mediates apoptosis. Together, our studies demonstrate two separate functions for the ESX transcription factor, apoptosis and transformation. Further, these two functions have distinct mechanisms: ESX-mediated apoptosis depends on nuclear ESX protein localization and appears to result from ESX function in transcription regulation. In contrast, ESX function in mammary epithelial cell transformation is mediated by the cytoplasmic function of its novel SAR domain.
