ETL (Extract, Transform, Load) for Data Integration. Concepts and exemplary usage Daniel Kapferer,2021-04-22 Studienarbeit aus dem Jahr 2020 im Fachbereich Informatik - Wirtschaftsinformatik, Note: 1, Universität Wien (Betriebswirtschaftslehre), Veranstaltung: Advanced Topics in Business Informatics (MA) - Business Intelligence, Sprache: Deutsch, Abstract: Das Ziel dieser Seminararbeit ist es, einen Überblick über den aktuellen Forschungsstand der Datenintegration mithilfe von ETL zu schaffen. Im ersten Teil werden wichtige Konzepte, Nutzungsszenarien und Funktionalitäten von ETL anhand einer Literaturrecherche aufgezeigt und diskutiert. Darüber hinaus werden gängige Fehlerquellen bei der Durchführung von ETL zusammengefasst. Außerdem soll eine Übersicht über diverse Open Source Tools zur Datenintegration mit ETL gegeben werden und auf deren Vor- und Nachteile hingewiesen werden. Neben dieser Literaturrecherche wird die Anwendung von ETL anhand eines konkreten Fallbeispiels demonstriert und diskutiert. Die Ausarbeitung soll dazu dienen, anhand eines Praxisbeispiels einen tieferen Einblick in die Implementierung von ETL zu erhalten, sowie Probleme bei der Durchführung dieses Vorgangs festzustellen. Seitdem es die Digitalisierung gibt, hat sich die Menge der erzeugten Daten drastisch erhöht. Es herrscht ein exponentielles Wachstum an strukturierten und unstrukturierten Daten, welche Unternehmen zur Verfügung stehen und bei richtiger Auswertung Wettbewerbsvorteile versprechen. Doch woher kommen die relevanten Daten und welche Voraussetzungen sind zu erfüllen, um diese zu analysieren? Hier kommt die Datenintegration ins Spiel. Darunter versteht man die Kombination von technischen Prozessen und Geschäftsprozessen. Diese werden verwendet, um Daten aus unterschiedlichen Quellen zu neuen Informationen zu kombinieren, welche wertvoll und aussagekräftig sind. Extract, Transform & Load (ETL) ist einer der Prozesse, mit dem Daten integriert werden können. Diese Technik spielt eine zunehmend wichtige Rolle im Unternehmen, wenn es darum geht, Geschäftsabläufe zu unterstützen. Ein weiterer Treiber für die Verwendung von Datenintegrations-Tools ist der dringende Bedarf an erweiterter Datenintegration, Hybrid-/Multi-Cloud-Datenmanagement, sowie Design von Datenstrukturen. Aufgrund des steigenden Interesses an ETL und der Notwendigkeit der Datenintegration in der Praxis, soll sich die Seminararbeit mit den Fragestellungen beschäftigen, was man unter dem Begriff ETL versteht, welche Open Source Tools zur Anwendung von ETL zur Verfügung stehen und wie ETL anhand eines Fallbeispiels angewendet wird.

Etl - Extract, Transform, Load Dr Jim Ras,2018-08-05 ETL is short for extract, transform, load, three database functions that are combined into one tool to pull data out of one database and place it into another database. Extract is the process of reading data from a database. In addition to a relational database, a data warehouse environment can include an extraction, transportation, transformation, and loading (ETL) solution, online analytical processing (OLAP) and data mining capabilities, client analysis tools, and other applications that manage the process of gathering data and delivering it to business users.

Mastering HPCC Systems: Fundamentals of ETL Processing Richard Taylor,2024-01-16 HPCC Systems is an Open Source Big Data supercomputing platform that is an alternative to the Hadoop and Spark worlds. The Mastering HPCC Systems series introduces the HPCC Systems platform to anyone interested in evaluating it for use on their own big data projects. It also expands the ECL programming knowledge of anyone already working with the platform. This Fundamentals of ETL Processing volume provides an introduction to the ECL language through hands-on working through the standard data ingest process common to all Big Data projects. It starts with acquiring data and importing it into the HPCC Systems platform. It then takes you through data exploration, cleaning, and standardization processes. It ends by using that transformed data to create a data product ready for delivery to end-users.

Testing Bi and Etl Applications With Manual and Automation Approach Shanthi Kumar Vemulapalli,2015-07-24 The BI Projects are heart of the any business organization. The IT departments need to struggle a lot to bring them into a good shape by spending thousands of man days efforts towards data validation, cleansing, transforming, consolidating and presenting to the users. At the same time the BI Project evaluation for its implementation is a challenge to any IT organization. The resources should be well understood on its activities by collecting latest information. They also need to work in collaboration with the technical teams by understanding the latest design and development requirements. At the same time they need to confirm with the users on their understanding of the latest requirements before stepping into the evaluation process. This activity denotes lot of resource educations is required for BI Projects evaluation. One might get the following questions also into their mind: What kind of techniques can be used for data transformation? Why do you need to evaluate thoroughly the BI applications? Why do you need a Big Bang kind of test coverage for BI Projects? Why do you need different environments for BI Projects? What kind of testing is involved? Is there any test automation process involved for BI projects? If you are nominated as a business representative to certify the ETL/BI Application; you might ask some of the following questions. i) Is the appropriate data being extracted? ii) If the source data element is split into multiple columns, is it done correctly during the transformation process? iii) If some data elements are merged together did any integrity problems result from this transformation process? iv) Is the data loaded correctly into the appropriate BI target databases and the appropriate BI tables? v) Can the data in the BI target databases be reconciled with the source files and source databases? Where are the reconciliation totals stored? vi) Are data values correctly transformed and cleansed? Is bad data slipping through without notice? vii) Is the load performance

adequate? And is the BI data available to the business people when they expect it? For all the above test scenarios; this Book can denote the solutions to follow. By considering the above clarifications or questions; with my past 10 plus years of work experiences on these kind of projects, I have made this detailed E-Book to understand the Data warehouse concepts in depth, the development activities and the feasible testing methodology need to be used for applying the evaluation procedure. After going through this E-Book with clear understanding on it, any BI professional can be ready to step into the BI project evaluation confidently with self motivation.

  Entropy Guided Transformation Learning: Algorithms and Applications Cícero Nogueira dos Santos,Ruy Luiz Milidiú,2012-03-14 Entropy Guided Transformation Learning: Algorithms and Applications (ETL) presents a machine learning algorithm for classification tasks. ETL generalizes Transformation Based Learning (TBL) by solving the TBL bottleneck: the construction of good template sets. ETL automatically generates templates using Decision Tree decomposition. The authors describe ETL Committee, an ensemble method that uses ETL as the base learner. Experimental results show that ETL Committee improves the effectiveness of ETL classifiers. The application of ETL is presented to four Natural Language Processing (NLP) tasks: part-of-speech tagging, phrase chunking, named entity recognition and semantic role labeling. Extensive experimental results demonstrate that ETL is an effective way to learn accurate transformation rules, and shows better results than TBL with handcrafted templates for the four tasks. By avoiding the use of handcrafted templates, ETL enables the use of transformation rules to a greater range of tasks. Suitable for both advanced undergraduate and graduate courses, Entropy Guided Transformation Learning: Algorithms and Applications provides a comprehensive introduction to ETL and its NLP applications.
