Optimal Control Adam B. Levy,2023-07-24 This book may serve as a basis for students and teachers. The text should provide the reader with a quick overview of the basics for Optimal Control and the link with some important concepts of applied mathematical, where an agent controls underlying dynamics to find the strategy optimizing some quantity. There are broad applications for optimal control across the natural and social sciences, and the finale to this text is an invitation to read current research on one such application. The balance of the text will prepare the reader to gain a solid understanding of the current research they read.

Foundations of Nanotechnology – Three Volume Set A. K. Haghi,Sabu Thomas,Moein MehdiPour MirMahaleh,Saeedeh Rafiei,Shima Maghsoodlou,Arezo Afzali,2015-05-30 Nanoscale science, engineering, and technology—commonly referred to collectively as nanotechnology—is believed by many to offer extraordinary economic and societal benefits. Nanotechnology is generally defined as the ability to create and use materials, devices, and systems with unique properties at the scale of approximately 1 to 100 nm. Nanotechnology offers society the promise of major benefits, but also raises questions of potential

adverse effects. The first volume covers pore size in carbon-based nano-adsorbents, resulting in materials that exhibit unique sorptive properties with a general view of the recent activities on the study of pore structure control. The collection of topics in volume 2 reflects the diversity of recent advances in nanoelements formation and interactions in nanosystems with a broad perspective that will be useful for scientists and engineers as the use of nanotechnology in the consumer and industrial sectors is expected to increase significantly in the future. And the third volume discusses important issues and trends related to research strategy in mechanics of carbon nanotubes.

Soil Erosion in Europe John Boardman,Jean Poesen,2007-01-11 Provides a unique and comprehensive assessment of soil erosion throughout Europe, an important aspect to control and manage if landscapes are to be sustained for the future. Written in two parts, Soil Erosion in Europe primarily focuses on current issues, area specific soil erosion rates, on and off-site impacts, government responses, soil conservation measures, and soil erosion risk maps. The first part overviews the

erosion processes and the problems encountered within each European country, whilst the second section takes a cross-cutting theme approach. Based on an EU-funded project that has been running for four years with erosion scientists from 19 countries

Reviews contemporary erosion processes and rates on arable and rangeland in Europe Looks at current issues, such as socio-economic drivers, controlling factors specific to the country and changes in land use

Applied Numerical Methods Using MATLAB Won Y.

Yang, Wenwu Cao, Tae-Sang Chung, John Morris, 2005-05-20 In recent years, with the introduction of new media products, there has been a shift in the use of programming languages from FORTRAN or C to MATLAB for implementing numerical methods. This book makes use of the powerful MATLAB software to avoid complex derivations, and to teach the fundamental concepts using the software to solve practical problems. Over the years, many textbooks have been written on the subject of numerical methods. Based on their course experience, the authors use a more practical approach and link every method to real engineering and/or science problems. The main benefit is that engineers don't have to know the mathematical theory in order to apply the numerical methods

for solving their real-life problems. An Instructor's Manual presenting detailed solutions to all the problems in the book is available online.

Contemporary Issues in Soil Mechanics Sayed

Hemeda,Mounir Bouassida,2018-10-27 This volume is of interest to practical engineers. It discusses some contemporary issues related to soil mechanics in earthwork projects which are critical components in civil construction and often require detailed management techniques and unique solution methods to address failures. Being earth bound, earthwork is influenced by geomaterial properties at the onset of a project. Hence, an understanding of the in-situ soil properties is essential. Slope stability is a common problem facing earthwork construction, such as excavations and shored structures. Analytical methods for slope stability remain critical for researchers due to the mechanical complexity of the system. Striving for better earthwork project managements, the geotechnical engineering community continues to find improved testing techniques for determining sensitive properties of soil and

rock, including stress-wave based, non-destructive testing methods. To minimize failure during earthwork construction, past case studies and data may reveal useful lessons and information to improve project management and minimize economic losses. This volume discusses these aspects using appropriate methods in a simple way. The volume is based on the best contributions to the 2nd GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures, Egypt 2018 – The official international congress of the Soil-Structure Interaction Group in Egypt (SSIGE).

Disaster Management and Human Health Risk II C. A.

Brebbia,Alain J. Kassab,E. Divo,2011 The increase in the number of large-scale natural disasters in recent years has been alarming.Major floods, hurricanes, earthquakes and many others have affected millions of people, with great destruction of property and loss of life, while forest fires, pipeline failures, and bombings have had equally devastating affects over a smaller scale. It is clear that future threats stem both from human failures and from terrorism, as well as from less predictable natural phenomena. The

increased threats make the convening of the Second International Conference on Disaster Management and Human Health Risk important for the sharing of knowledge among experts on public health, security, and disaster management. This book contains their contributions to the conference. Topics covered will include Emergency preparedness; Risk mitigation; Natural disasters; Man-made disasters; Learning from disasters; Disaster analysis, monitoring and mitigation; Global risks and health; Pandemic and biological threats; Surveillance and early warning systems; Public health preparedness; Socio-economic issues; and Service sustainability.
