Reports of civil and criminal cases decided by the Court of Appeals of Kentucky ... ,1910

500 Years from Home Peter Maida,2004-04-01 Lost in the galaxy. The colony ship Caster left Kellia bound for the nearby planet of Perim. They never made it. Castor's crew and the colony leadership wake up to find themselves 47.3 light years from home and five hundred years older. How it happened and why are mysteries to be solved. Surviving was a challenged to be faced. Castor finds a world, a beautiful world that seems to be the answer to all of their hopes. A world that was a dream in the spring becomes a nightmare in the summer. Who is Scaret's Child? What can turn a beautiful world into a land of terror, and what do the humans know that the Kellians don't? The Kellians had to wait 500 years for the answers, you don't.

One Hundred Years Of General Relativity: From Genesis And Empirical Foundations To Gravitational Waves, Cosmology And Quantum Gravity - Volume 2 Wei-tou

Ni,2017-05-26 The aim of this two-volume title is to give a comprehensive review of one hundred years of development of general relativity and its scientific influences. This unique title provides a broad introduction and review to the fascinating and profound subject of general relativity, its historical development, its important theoretical consequences, gravitational wave detection and applications to astrophysics and cosmology. The series focuses on five aspects of the theory: The first three topics are covered in Volume 1 and the remaining two are covered in Volume 2. While this is a two-volume title, it is designed so that each volume can be a standalone reference volume for the related topic.

Atom Optics and Space Physics Wolfgang Schleich,IOS Press,2009-07-03 The goal of this volume is to discuss the rapidly moving field of atom optics and interferometry with all its intricate aspects ranging from fundamental physics to applications and the theory of relativity. The breathtaking success in manipulating atoms using lasers has encouraged these two so far disjunct communities to move closer together and begin

collaborations. After an introduction to atom optics and Bose-Einstein condensation, the theoretical foundations of cold atom interferometers, their use to test gravity, and their implementation in laboratory measurements of the Earth rotation and of Newton's gravitational constant are discussed. Several papers discuss the characteristics of gyroscopes and interferometers as sensors for inertial forces, starting from gyroscopes based on light waves and comparing their sensitivity to those based on matter waves. The final topic is the variation of fundamental constants, a subject that during the last years has attracted a lot of attention from different communities of physics.

Archives of the Scientific Revolution Michael Cyril William Hunter, Michael Hunter, 1998 The seventeenth century in Western Europe remains the key time and place for the development of modern science; the basic theme of this book is what the nature of seventeenth-century archives can tell us about this development, through a series of case studies (Boyle, Galileo, Huygens, Newton included). Manuscript collections created by the individuals and institutions who were responsible for the scientific revolution offer valuable evidence of the intellectual aspirations and working practices of the principal protagonists. This volume is the first to explore such archives, focusing on the ways in which ideas were formulated, stored and disseminated, and opening up understanding of the process of intellectual change. It analyses the characteristics and history of the archives of such leading intellectuals as Robert Boyle, Galileo Galilei, G.W. Leibniz, Isaac Newton and William Petty; also considered are the new scientific institutions founded at the time, the Royal Society and the Académie des Sciences. In each case, significant broader findings emerge concerning the nature and role of such holdings; an introductory essay discusses the interpretation and

exploitation of archives. MICHAEL HUNTER is Professor of History at Birkbeck College, University of London. Contributors: MICHAEL HUNTER, MASSIMO BUCCIANINI, MARK GREENGRASS, ROBERT A. HATCH, FRANCES HARRIS, JOELLA YODER, DOMENICO BERTOLONI MELI, ROB ILIFFE, JAMES G.O'HARA, MORDECHAI FEINGOLD, CHRISTIANE DEMEULENAERE-DOUYRE, DAVID STURDY

Biothermodynamics Mustafa Ozilgen, Esra Sorguven Oner, 2016-11-18 Over the past several decades there has been increasing research interest in thermodynamics as applied to biological systems. This concerns topics such as muscle work and internal energy such as fat and starch. Applications of the first and second laws of thermodynamics to the human body are important to dieticians and health science experts, and applications of these concepts to the animal body are a major concern of animal scientists. This book covers these key topics, which are typically not covered in classic or traditional thermodynamics texts used in mechanical and chemical engineering.

Equations of Motion in Relativistic Gravity Dirk

Puetzfeld,Claus Lämmerzahl,Bernard Schutz,2015-06-01 The present volume aims to be a comprehensive survey on the derivation of the equations of motion, both in General Relativity as well as in alternative gravity theories. The topics covered range from the description of test bodies, to self-gravitating (heavy) bodies, to current and future observations. Emphasis is put on the coverage of various approximation methods (e.g., multipolar, post-Newtonian, self-force methods) which are extensively used in the context of the relativistic problem of motion. Applications discussed in this volume range from the motion of binary systems -- and the gravitational waves emitted by such systems -- to observations of the galactic center. In particular the impact of choices at a fundamental theoretical level on the interpretation of experiments is highlighted. This book provides a broad and up-to-date status report, which will not only be of value for the experts working in this field, but also may serve as a guideline for students with background in General Relativity who like to enter this field.

Intumescent Coatings for Fire Protection of Building Structures and Materials Olga Zybina,Marina

Gravit,2020-11-04 The book provides practical recommendations

for creation of fire retardant materials with an increased service life. The enhanced fire resistance seen in these materials is based on the regularities of the chemical and physicochemical interaction of the components of intumescent composition in the process of thermolytic synthesis of heat-insulating char-foamed layers. The aim of fire protection of various objects with intumescent materials is to create a heat-insulating charred layer on the surface of structural elements; this layer can withstand high temperatures and mechanical damage which are typical during fires. The authors describe the contribution of basic components (melamine, pentaerythritol, ammonium polyphosphate), additional components (chlorinated paraffin, urea, cellulose, carbon nano additives, etc.) and polymer binders of intumescent compositions on the process of charring. The technological aspects of manufacturing, application and operation of fire retardant intumescent compositions, which can be useful for organizations that produce and use fire retardant materials, are also described.
