Machine-Type Communication for Maritime Internet-of-Things Michael Mao Wang, Jingjing Zhang, 2021-10-26 This book introduces the concept of machine-type communication (MTC) for maritime Internet of Things. The first part of the book portrays a maritime MTC system from an architectural perspective and describes an MTC framework and the fundamental components, laying out a foundation that leads to an ultimate solution to the maritime IoT requirements and challenges. The second part ties together all discussed in the first part and demonstrates how to apply it to a practical system through a realistic design example based on an international maritime mobile spectrum. The book serves as a comprehensive tutorial of the maritime MTC from the top (the network architecture) to the bottom (the air/radio interface and regulatory radio spectrum constraints), guiding readers to an easier understanding of the maritime MTC-related issues and the rationale behind the design. The primary readers of this book include maritime communication engineers, maritime IoT professionals, maritime academia, and the general MTC and IoT communities. Presents the concept of machine-type communication (MTC) for maritime Internet of Things (IoT) and its services, requirements, and challenges; Explains space-earth-integrated maritime machine-type communication system architecture with a comparison with its land counterpart; Sets out a comprehensive framework and details the ways to implement it on a practical radio spectrum; Includes maritime MTC radio spectrum and regulations, network design, protocol design, and air interface design.

Tax Policy and the Economy, Volume 37 Robert A. Moffitt, 2023-06-19 Timely and authoritative research on the latest issues in tax policy. Tax Policy and the Economy publishes current academic research on taxation and government spending with both immediate bearing on policy debates and longer-term interest. This volume of Tax Policy and the Economy presents new research on important issues concerning US taxation and transfers. First, Edward L. Glaeser, Caitlin S. Gorbach, and James M. Poterba examine the distribution of burdens associated with taxes on transportation. Replacing the gasoline tax with a vehicle-miles-traveled (VMT) tax would increase the burden on higher-income households, who drive more fuel-efficient cars and are more likely to own electric vehicles. User charges for airports, subways, and commuter rail are progressive, while the burden of bus fees is larger for lower-income households than for their higher-income counterparts. Next, Katarzyna Bilicka, Michael Devereux, and Irem Güçeri investigate tax shifting by multinational companies (MNCs) and the implications of a potential Global Minimum Tax (GMT). They find that MNCs shift intellectual property to tax havens, and that a large share of patenting activity takes place in tax havens where little or no R&D occurs. Tax havens are particularly important for MNCs with large subsidiary networks; such firms would likely be subject to a GMT. Mark Duggan, Audrey Guo, and Andrew C. Johnston study the role of experience rating in the Unemployment Insurance (UI) system and find that the current structure stabilizes the labor market because it penalizes firms with high rates of UI-eligible layoffs. In the fourth paper, David Altig, Laurence J. Kotlikoff, and Victor Yifan Ye calculate how retiring at different ages will affect Social Security benefit amounts, taking into account taxation and other benefits. They find that virtually all individuals aged 45 to 62 should wait until age 65 or later to maximize their Social Security benefits. Indeed, 90 percent would benefit from waiting until age 70, but only 10 percent do

so. Finally, Jonathan Meer and Joshua Witter examine the potential impact of the Earned Income Tax Credit on the labor force decisions of childless adults who are eligible for a small credit after they reach age 25. Comparing labor force attachment changes just before and after this age suggests that the EITC has little impact on the labor force participation of this group.

In addition, this work explores emerging wireless ad hoc technologies based on communication coverage areas: body sensor networks, personal area networks, local area networks, and metropolitan area networks and their applications in critical sectors, for example, agriculture, environment, public health and public transportation.

Advanced Wireless Networks Savo G. Glisic,2016-07-22 The third edition of this popular reference covers enabling technologies for building up 5G wireless networks. Due to extensive research and complexity of the incoming solutions for the next generation of wireless networks it is anticipated that the industry will select a subset of these results and leave some advanced technologies to be implemented later,. This new edition presents a carefully chosen combination of the candidate network architectures and the required tools for their analysis. Due to the complexity of the technology, the discussion on 5G will be extensive and it will be difficult to reach consensus on the new global standard. The discussion will have to include the vendors, operators, regulators as well as the research and academic community in the field. Having a comprehensive book will help many participants to join actively the discussion and make meaningful contribution to shaping the new standard.
