The MX Book of New Sherlock Holmes Stories - Part IX David Marcum, 2018-04-17 Part IX: 2018 Annual (1879-1895) features contributions by: Deanna Baran, Roger Riccard, David Marcum, Tracy Revels, S.R. Bennett, Nick Cardillo, Robert Stapleton, Kevin Thornton, Leslie Charteris and Denis Green, Shane Simmons, James Moffett, C.H. Dye, Stephan Gaspar, Marcia Wilson, Sonia Featherstone, Geri Schear, David Friend, Mark Mower, and a poem by Amy Thomas... and Forewords in both volumes by Nicholas Meyer, Roger Johnson, and David Marcum. Once again, the adventures of Sherlock Holmes and Dr. Watson continue in this acclaimed anthology series, with thirty-seven new tales presented in two companion volumes – more Holmes than could fit into one book! In 2015, The MX Book of New Sherlock Holmes Stories was first published, a huge three-book set featuring over sixty new traditional Holmes exploits, all set within the correct time period. Soon, the demand for even more traditional Holmes adventures led to further volumes. The next year brought Part IV: 2016 Annual, and then Part V: Christmas Adventures. In spring 2017 there was Part VI: 2017 Annual, and that fall revealed the massive two-volume set, Parts VII and VIII: Eliminate the Impossible. Now we present another two simultaneous volumes, Parts IX and X: 2018 Annual (1879-1895) and (1896-1916). There can be no argument that Sherlock Holmes is one of the

most famous and recognizable figures in the world. There were only sixty narratives brought to us by the original Literary Agent, Sir Arthur Conan Doyle. Clearly that is not enough. Watson once wrote that he kept his unpublished cases in his old Tin Dispatch Box. Now, with the publication of these latest volumes, that box has again been explored by some of today's best Sherlockian writers, all of whom are donating their royalties from these anthologies toward the restoration of Undershaw, one of Sir Arthur Conan Doyle's houses, and the location where *The Hound of the Baskervilles* and many later Holmes stories were completed. Climb the seventeen steps to the sitting room at 221b Baker Street. Sherlock Holmes and Doctor Watson are waiting... The game is afoot!

The MX Book of New Sherlock Holmes Stories Part I David Marcum, 2017-03-21 Part One of a record breaking three-volume collection, bringing together over sixty of the world's leading Sherlock Holmes authors. All the stories are traditional Sherlock Holmes pastiches. This volume covers the years from 1881 to 1889, including contributions from: John Hall, Hugh Ashton, Adrian Middleton, David Marcum, Jayantika Ganguly, Denis O. Smith, Amy Thomas, Kevin David Barratt, Luke Benjamin Kuhns, Summer Perkins, Deanna Baran, Shane Simmons, C.H. Dye, Mark Mower, Derrick Belanger, Daniel D. Victor, Steve Mountain, Stephen Wade, John Heywood, Will Thomas, Daniel McGachey, Martin Rosenstock, Craig Janacek, (and a poem from Michael Kurland). The authors are donating all the royalties from the collection to preservation projects at Sir Arthur Conan Doyle's former home, Undershaw.

Material Designs and New Physical Properties in MX- and MMX-Chain Compounds Masahiro Yamashita, Hiroshi Okamoto, 2012-12-13 This is the first book to comprehensively address the recent developments in both the experimental and theoretical aspects of quasi-one-dimensional halogen-bridged mono- (MX) and binuclear metal (MMX) chain complexes of Pt, Pd and Ni. These complexes have one-dimensional electronic structures, which cause the various physical properties as well as electronic structures. In most MX-chain complexes, the Pt and Pd units are in M(II)-M(IV) mixed valence or charge density wave (CDW) states due to electron-phonon interactions, and Ni compounds are in Ni(III) averaged valence or Mott-Hubbard states due to the on-site Coulomb repulsion. More recently, Pd(III) Mott-Hubbard (MH) states have been realized in the ground state by using the chemical pressure. Pt and Pd chain complexes undergo photo-induced phase transitions from CDW to MH or metal states, and Ni chain complexes undergo photo-induced phase transitions from MH to metal states. Ni chain complexes with strong electron correlations show tremendous third-order optical nonlinearity and nonlinear electrical conductivities. They can be explained theoretically by using the extended Peierls-Hubbard model. For MMX-chain complexes, averaged valence, CDW, charge polarization, and alternating charge polarization states have been realized by using chemical modification and external stimuli, such as temperature, photo-irradiation, pressure, and water vapor. All of the electronic structures and phase transitions can be explained theoretically.

Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, MX books and manuals for download have transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast

library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals.
