CIA Lock Picking Central Intelligence Agency,2015-12-31 There has been much opinion and little fact written on the subject of lock picking. It is the purpose of this book to clarify the facts about this delicate process, and at the same time to train you in proper procedure. Reading this book is certainly enough to get you started picking simple locks, but remember: a great deal of time and patience are needed to become a truly proficient locksmith. In this volume, you will learn the fundamental theories of lock picking in addition to proper terminology, the importance of tool design (i.e. how to select and use the right tool for a given job), the effects of tolerances, and finally the techniques most commonly used by locksmiths to successfully pick the vast majority of standard pin and wafer tumbler locks. Lock picking is a useful, engaging, and satisfying skill; with this book and a little determination, you'll be off to a great start.

Sports Cardiology Casebook Antonio Pelliccia,2009-07-21 Comparatively little is known about the risk of sudden death associated with exercise in young competitive athletes, and whether the benefits of sports activity outweigh the hazards of exercise-related fatal events is a clinical dilemma. This is only a small part of the story, however, as there are considerable effects of exercise whether it be at a competitive level or on a 'leisure' level on patients of all ages. This in itself is of massive importance to the cardiac patient population as exercise is a key component of effective recovery and recommended as central in the prevention of much cardiac disease.

Environmental Justice and Sustainability in the Former Soviet Union Julian Agyeman,Yelena Ogneva-Himmelberger,2009 An examination of the awareness of environmental and social justice issues in the former Soviet republics--from the Western-style democracies of the Baltic region to the totalitarian regimes of Central Asia--and the resulting activism in those states. The legacy of environmental catastrophe in the states of the former Soviet Union includes desertification, pollution, and the toxic aftermath of industrial accidents, the most notorious of which was the Chernobyl disaster of 1986. This book examines the development of environmental activism in Russia and the former Soviet republics in response to these problems and its effect on policy and planning. It also shows that because of increasing economic, ethnic, and social inequality in the former Soviet states, debates over environmental justice are beginning to come to the fore. The book explores the varying environmental, social, political, and economic circumstances of these countries--which range from the Western-style democracies of the Baltic states to the totalitarian regimes of Central Asia--and how they affect the ecological, environmental, and public health. Among the topics covered are environmentalism in Russia (including the progressive nature of its laws on environmental protection, which are undermined by overburdened and underpaid law enforcement); the effect of oil wealth on Azerbaijan and Kazakhstan; the role of nationalism in Latvian environmentalism; the struggle of Russia's indigenous peoples for environmental justice; public participation in Estonia's environmental movement; and lack of access to natural capital in Tajikistan. Environmental Justice and Sustainability in the Former Soviet Union makes clear that although fragile transition economies, varying degrees of democratization, and a focus on national security can stymie progress toward just sustainability, the diverse states of the former Soviet Union are making some progress toward green and environmental justice issues separately.

Miracles and Other Realities Lee Pulos,Gary Richman,2021-02-23 Once in a generation, a person of extraordinary psychic powers comes along. Miracles and Other Realities tells the true story of Thomaz Green Morton, a gifted psychic from the Minas Gerais region of Brazil. Originally published in 1990 and now rereleased for a modern audience, Miracles and Other Realities recounts the fascinating story of Thomaz Green Morton and his powerful psychic abilities. This book will turn the heads of scientists, whose traditional acceptance of reality has been limited to that which can be measured objectively, and will introduce to a wider audience the power of mind over matter. Thomaz's story begins when he is struck by lightning on his twelfth birthday. This electrical insult to his body detonated a dazzling range of paranormal abilities. (Severe electric shock is, incidentally, common to the childhood experience of every major psychic.) Thomaz has since been called the most powerful psychic in the world. Driven by his mind to the farther reaches of reality to produce psychic phenomena such as metal-bending, spiritual healing, and transmutations of matter, Thomaz's feats are well-documented by the authors. The story is all the more captivating because Thomaz is graced with a childlike emotional temperament, making him intent on living life to its fullest. Coauthors Lee Pulos and Gary Richman explore through Thomaz the ways in which magic, or miracles, challenges the conventional view of reality, thereby shaking up rational belief systems that inhibit the experience of new realms of possibility. Readers will find Thomaz's story compelling, not only as a real-life example of human potential but as a metaphor for unleashing other realities and levels of consciousness to tap into the potential within themselves.
