Chen, 2011-02-22 Providing a complete review of existing work in music emotion developed in psychology and engineering, *Music Emotion Recognition* explains how to account for the subjective nature of emotion perception in the development of automatic music emotion recognition (MER) systems. Hypermetric Manipulations in Haydn and Mozart Danuta Mirka, 2021 This book presents a systematic discussion of hypermeter and phrase structure in eighteenth-century music. It combines perspectives from historical and modern music theory with insights from the cognitive study of music and introduces a dynamic model of hypermeter, which allows the analyst to trace the effect of hypermetric manipulations in real time. This model is applied in analyses of string chamber music by Haydn and Mozart. The analyses shed a new light upon this celebrated musical repertoire, but the

aim of this book goes far beyond an analytical survey of specific compositions. Rather, it is to give a comprehensive account of the ways in which phrase structure and hypermeter were described by eighteenth-century music theorists, conceived by eighteenth-century composers, and perceived by eighteenth-century listeners--

Virtual Music Shara Rambarran, 2021-04-08 Virtuality has entered our lives making anything we desire possible. We are, as Gorillaz once sang, in an exciting age where 'the digital won't let [us] go...' Technology has revolutionized music, especially in the 21st century where the traditional rules and conventions of music creation, consumption, distribution, promotion, and performance have been erased and substituted with unthinkable and exciting methods in which absolutely anyone can explore, enjoy, and participate in creating and listening to music. Virtual Music explores the interactive relationship of sound, music, and image, and its users (creators/musicians/performers/audience/consumers). Areas involving the historical, technological, and creative practices of virtual music are surveyed including its connection with creators, musicians, performers, audience, and consumers. Shara Rambarran looks at the fascination and innovations surrounding virtual music, and illustrates key artists (such as Grace Jones, The Weeknd), creators (such as King Tubby, Kraftwerk, MadVillain, Danger Mouse), audiovisuals in video games and performances (such as Cuphead and Gorillaz), audiences, and consumers that contribute in making this musical experience a phenomenon. Whether it is interrogating the (un)realness of performers, modified identities of artists, technological manipulation of the Internet, music industry and music production, or accessible opportunities in creativity, the book offers a fresh understanding of virtual music and appeals to readers who have an interest in this digital revolution.

Audio Source Separation Shoji Makino, 2018-03-01 This book provides the first comprehensive

overview of the fascinating topic of audio source separation based on non-negative matrix factorization, deep neural networks, and sparse component analysis. The first section of the book covers single channel source separation based on non-negative matrix factorization (NMF). After an introduction to the technique, two further chapters describe separation of known sources using non-negative spectrogram factorization, and temporal NMF models. In section two, NMF methods are extended to multi-channel source separation. Section three introduces deep neural network (DNN) techniques, with chapters on multichannel and single channel separation, and a further chapter on DNN based mask estimation for monaural speech separation. In section four, sparse component analysis (SCA) is discussed, with chapters on source separation using audio directional statistics modelling, multi-microphone MMSE-based techniques and diffusion map methods. The book brings together leading researchers to provide tutorial-like and in-depth treatments on major audio source separation topics, with the objective of becoming the definitive source for a comprehensive, authoritative, and accessible treatment. This book is written for graduate students and researchers who are interested in audio source separation techniques based on NMF, DNN and SCA.

Multivariate Humanities Pieter M. Kroonenberg, 2021-06-29 This case study-based textbook in multivariate analysis for advanced students in the humanities emphasizes descriptive, exploratory analyses of various types of datasets from a wide range of sub-disciplines, promoting the use of multivariate analysis and illustrating its wide applicability. Fields featured include, but are not limited to, historical agriculture, arts (music and painting), theology, and stylometrics (authorship issues). Most analyses are based on existing data, earlier analysed in published peer-reviewed papers. Four preliminary methodological and statistical chapters provide general technical background to the case studies. The multivariate statistical methods presented and illustrated

include data inspection, several varieties of principal component analysis, correspondence analysis, multidimensional scaling, cluster analysis, regression analysis, discriminant analysis, and three-mode analysis. The bulk of the text is taken up by 14 case studies that lean heavily on graphical representations of statistical information such as biplots, using descriptive statistical techniques to support substantive conclusions. Each study features a description of the substantive background to the data, followed by discussion of appropriate multivariate techniques, and detailed results interpreted through graphical illustrations. Each study is concluded with a conceptual summary. Datasets in SPSS are included online.
