Cross-Bordering Dynamics in Education and Lifelong Learning Hideki Maruyama,2019-11-19 Education as a concept has long been taken for granted. Most people immediately think of schools and colleges, of classes and exams. This volume aims to highlight non-formal education (NFE) in its various forms across different historical and cultural contexts. Contributors draw upon their experience as educators and researchers in comparative education and sociology to elucidate, compare, and critique NFE in Asia, Europe, Latin America, and the USA. By mapping out NFE’s forms, functions, and dynamics, this volume gives us the opportunity to reflect on the myriad iterations of education to challenge preconceived limitations in the field of education research. Only by expanding the focus beyond that of traditional schooling arrangements can we work towards a more sustainable future and improved lifelong learning. This book will appeal to researchers interested in non-formal education and comparative education.

Bayesian Theory and Applications Paul Damien,Petros Dellaportas,Nicholas G. Polson,David A. Stephens,2013-01-24 This volume guides the reader along a statistical journey that begins with the basic structure of Bayesian theory, and then provides details on most of the past and present advances in this field.

Algorithmic Learning Theory Sanjay Jain,Hans Ulrich Simon,Etsuji Tomita,2005-10-11 This book constitutes the refereed proceedings of the 16th International Conference on Algorithmic Learning Theory, ALT 2005, held in Singapore in October 2005. The papers are organized in topical sections on kernel-based learning, bayesian and statistical models, PAlearning, query-learning, inductive inference, language learning, learning and logic, learning from expert advice, online learning, defensive forecasting, and teaching.

Drugs in American Society [3 volumes] Nancy E. Marion,Willard M. Oliver,2014-12-16 Containing more than 450 entries, this easy-to-read encyclopedia provides concise information about the history of and recent trends in drug use and drug abuse in the United States—a societal problem with an estimated cost of \$559 billion a year. Despite decades of effort and billions of dollars spent to combat the problem, illicit drug use in the United States is still rampant and shows no sign of abating. Covering illegal drugs ranging from marijuana and LSD to cocaine and crystal meth, this authoritative reference work examines patterns of drug use in American history, as well as drug control and interdiction efforts from the nineteenth century to the present. This encyclopedia provides a multidisciplinary perspective on the various aspects of the American drug problem, including the drugs themselves, the actions taken in attempts to curb or stop the drug trade, the efforts at intervention and treatment of those individuals affected by drug use, and the cultural and economic effects of drug use in the United States. More than 450 entries descriptively analyze and summarize key terms, trends, concepts, and people that are vital to the study of drugs and drug abuse, providing readers of all ages and backgrounds with invaluable information on domestic and international drug trafficking and use. The set provides special coverage of shifting societal and legislative perspectives on marijuana, as evidenced by Colorado and Washington legalizing marijuana with the 2012 elections.

Autonomous Intelligent Cyber Defense Agent (AICA) Alexander Kott,2023-07-04 This book offers a structured overview and a comprehensive guide to the emerging field of Autonomous Intelligent Cyber Defense Agents (AICA). The book discusses the current technical issues in autonomous cyber defense and offers information on practical design approaches. The material is presented in a way that is accessible to non-specialists, with tutorial information provided in the initial chapters and as needed throughout the book. The reader is provided with clear and comprehensive background and reference material for each aspect of AICA. Today’s cyber defense tools are mostly watchers. They are not active doers. They do little to plan and execute responses to attacks, and they don’t plan and execute recovery activities. Response and recovery – core elements of cyber resilience – are left to human cyber analysts, incident responders and system administrators. This is about to change. The authors advocate this vision, provide detailed guide to how such a vision can be realized in practice, and its current state of the art. This book also covers key topics relevant to the field, including functional requirements and alternative architectures of AICA, how it perceives and understands threats and the overall situation, how it plans and executes response and recovery, how it survives threats, and how human operators deploy and control AICA. Additionally, this book covers issues of testing, risk, and policy pertinent to AICA, and provides a roadmap towards future R&D in this field. This book targets researchers and advanced students in the field of cyber defense and resilience. Professionals working in this field as well as developers of practical products for cyber autonomy will also want to purchase this book.

Rare-Earth-Doped Fiber Lasers and Amplifiers, Revised and Expanded Michel J.F. Dignonnet,2001-05-31 Rare-Earth-Doped Fiber Lasers and Amplifiers, Second Edition discusses the essential principles, operating characteristics, and current technology of the main fiber laser and amplifier devices based on rare-earth-doped silica and fluorozirconate fibers. Covering all aspects of this revolutionary technology, the book reviews fiber fabrication methods and the basic spectroscopic properties of rare-earth ions in glasses, concentrates on the most important fiber laser sources, examines several advances in fiber amplifiers, and analyzes new findings and improvements in single-frequency operation, frequency tenability, broadband fiber sources, and blue-green and far-infrared fiber lasers.

Current Trends in Optical Amplifiers and Their Applications Tien-Pei Lee,1996 This volume of trends in optical amplifiers and their applications includes such topics as: progress in optical fibre amplifiers; reliability of high-power pump lasers for erbium-doped fibre amplifiers; and inP-based optical switch array using semiconductor optical amplifiers.

Crosstalk in WDM Communication Networks Idelfonso Tafur Monroy,Eduward Tangdiongga,2013-03-14 Optical communications networks are an essential part of the world wide telecommunication infrastructure . The number of users of present and future telecommunication services like Internet, web browsing and tele-education is expected to increase dramatically . As a consequence there is an imminent - mand for high broadband and high capacity communication systems. A prom- ing solution is found in the concept of all-optical networks . These networks exploit the vast capacity of the optical fiber by using multiplexing techniques that allow for an overall capacity of terabits per second. Channels are routed and switched in the optical domain . In this manner data channels are carried from the receiver side to its destination making use of optical transmission techniques . Wavelength division multiplexing (WDM) is a transmission technique that has dramatically increased the capacity of optical transmission systems. WDM allows for transmission of several channels over a single optical fiber by - ing different wavelength as the channel

carrier . Optical switching and routing techniques are also being developed to cope with the high data speeds and n- ber of channel carried in the optical fibers. These functionalities are provided by optical crossconnects. The use of transmission techniques such as WDM in combination with optical crossconnects is enabling optical networking at high bit-rates reaching terabits per second . These techniques also offer ways to improve the network flexibility and configurability .

Grammatical Inference: Algorithms and Applications Pieter Adriaans,Henning Fernau,Menno van Zaanen,2002-09-11 The Sixth International Colloquium on Grammatical Inference (ICGI2002) was held in Amsterdam on September 23-25th, 2002. ICGI2002 was the sixth in a series of successful biennial international conferenceson the area of grammatical inference. Previous meetings were held in Essex, U.K.; Alicante, Spain; Mo- peller, France; Ames, Iowa, USA; Lisbon, Portugal. This series of meetings seeks to provide a forum for the presentation and discussion of original research on all aspects of grammatical inference. Gr- matical inference, the process of inferring grammars from given data, is a ?eld that not only is challenging from a purely scienti?c standpoint but also ?nds many applications in real-world problems. Despite the fact that grammatical inference addresses problems in a re- tively narrow area, it uses techniques from many domains, and is positioned at the intersection of a number of di?erent disciplines. Researchers in grammatical inference come from ?elds as diverse as machine learning, theoretical computer science, computational linguistics, pattern recognition, and arti?cial neural n- works. From a practical standpoint, applications in areas like natural language - quisition, computational biology, structural pattern recognition, information - trieval, text processing, data compression and adaptive intelligent agents have either been demonstrated or proposed in the literature. The technical program included the presentation of 23 accepted papers (out of 41 submitted). Moreover, for the ?rst time a software presentation was or- nized at ICGI. Short descriptions of the corresponding software are included in these proceedings, too.

Grammatical Inference: Algorithms and Applications Arlindo L. Oliveira,2004-02-13 This book constitutes the refereed proceedings of the 5th International Colloquium on Grammatical Inference, ICGI 2000, held in Lisbon, Portugal in September 2000. The 24 revised full papers presented were carefully reviewed and selected from 35 submissions. The papers address topics like machine learning, automata, theoretical computer science, computational linguistics, pattern recognition, artificial neural networks, natural language acquisition, computational biology, information retrieval, text processing, and adaptive intelligent agents.
