Algebraic Specifications in Software Engineering Ivo Van Horebeek, Johan Lewi,2012-12-06 I prefer to view formal methods as tools. the use of which might be helpful. E. W. Dijkstra Algebraic specifications are about to be accepted by industry. Many projects in which algebraic specifications have been used as a design tool have been carried out. What prevents algebraic specifications from breaking through is the absence of introductory descriptions and tools supporting the construction of algebraic specifications. On the one hand. interest from industry will stimulate people to make introductions and tools. whereas on the other hand the existence of introductions and tools will stimulate industry to use algebraic specifications. This book should be seen as a contribution towards creating this virtuous circle. The book will be of interest to software designers and programmers. It can also be used as material for an introductory course on algebraic specifications and software engineering at undergraduate or graduate level. Nowadays. there is general agreement that in large software projects appropriate specifications are a must in order to obtain quality software. Informal specifications alone are certainly not appropriate because they are incomplete. inconsistent. inaccurate and ambiguous and they rapidly become bulky and therefore useless. The only way to overcome this problem is to use formal specifications. An important remark here is that a specification formalism (language) alone is not sufficient. What is also needed is a design method to write specifications in that formalism.

Fiber Optics Broadband ISDN IGIC, Inc. Staff,1994

ISDN The Integrated Services Digital Network Peter Bocker,2012-12-06 From the reviews: Computer Communications Although the concept of ISDN has been with us now for over a decade, and much development work has been carried out during this period, there are very few comprehensive books available on the subject. This is perhaps one of the best of them.The book aims to provide engineers and potential engineers with an overview of the requirements and features of ISDN that will be useful in the design, construction and operation of such systems. The author and his six collaborators have succeeded in this respect, producing a readable, yet thorough, technical book that can be recommended to a wider audience... Throughout the book the explanations are enhanced by clear, well-presented, relevant diagrams, and there is a very useful annex on the full set of standards relating to ISDN. This is a good book

that will definitely be used as a reference over the next few years by many engineers working in the area... IEEE Computer ISDN is a slim but very effective book dealing with almost every aspect of the evolution of public communications networks... I highly recommend this book to engineers who are new either to the field of ISDN or to specific ISDN topics. It is clear, concise, and is excellent padding for those tackling the CCITT recommendations.

Information Technology and the Computer Network K. G. Beauchamp, 2012-12-06
1.1 Scope This paper deals with the following subjects: 1. Introduction 2. Feasibility study definition in IT 3. Forming a feasibility study team 4. The feasibility study work 5. The feasibility study report 6. Discussion 1.2 Information Technology (IT) Information was defined as anything sensed by at least one of the human senses and that may change the level of his knowledge. The information may be true or false, sent by premeditation or generated by coincidence, needed by the interceptor or intended to create new needs. The creation of the information may be very costly or free of charge. The information may be an essential need or just a luxury. Each information may be a one shot nature, eg., announcing a marriage, or a constant update need one, eg., news. Information technology as defined herein means all the types of systems needed to deal with the information, transfer it to any place, store it, adapt it, etc. Information technology is usually based on Telecommunications. Telecommunications means a large variety of possibilities. Usually, the IT's are based on the creation, updating, processing and transmission of information. The information itself is usually alphanumeric and graphic. Gradually, there is a tendency to step over to what is seen as more natural information, audio and visual.

International Symposium on Human Factors in Telecommunications, 1983

Design of Office Information Systems Clarence A. Ellis, Najah

Naffah, 2012-12-06 The goal of this book is to present a framework within which the myriad of office technologies and office systems design techniques can be better understood. There are a number of office books which deal with the social/organizational aspects of office automation or with office equipment introduction strategies. This book differs from those in that it is written by technical computer people for technical computer people. As such,

it assumes a general computer literacy and contains a technical emphasis with a social fiber woven in. Besides the framework, we also present the current state of office primitives, office tools, and office technology. We cover relevant work on-going by international standards bodies, and we discuss the concepts that are emerging (or which we feel will be emerging) from universities and industrial research laboratories. Office technologies and techniques are classified as personal environment aids versus communal environment aids. We now fully realize how difficult it is to write a coherent book within this fuzzy, interdisciplinary, rapidly changing field. Concepts have been stressed wherever possible; there are some sub-areas where the generalizing concepts have not yet emerged. We also realize the potential danger of obsolescence. We have tried to combat this somewhat by the presentation of concepts, generic tool design, and emphasizing our framework. This book is not a substitute for reading of the current periodical literature - that is where the most timely information lies.

Database and Expert Systems Applications A Min Tjoa, Isidro Ramos, 2012-12-06 The Database and Expert Systems Application -DEXA - conferences are mainly oriented to establish a state-of-the art forum on Database and Expert System applications. But Practice without Theory has no sense, as Leonardo said five centuries ago. In this Conference we try a compromise between these two complementary aspects. A total of 5 sessions are application-oriented, ranging from classical applications to more unusual ones in Software Engineering. Recent research aspects in Databases, such as activity, deductivity and/or Object Orientation are also present in DEXA 92, as well as the implication of the new data models such as OO-Model, Deductive Model, etc .. included in the Modelling sessions. Other areas of interest, such as Hyper-Text and Multimedia application, together with the classical field of Information Retrieval are also considered. Finally, Implementation Aspects are reflected in very concrete fields. A total of of nearly 200 papers submitted from all over the world were sent to DEXA 92. Only 90 could be accepted. A Poster session has also been established. DEXA 90 was held in Vienna, Austria; DEXA 91 in Berlin, Germany; and DEXA 92 will take place in Valencia, Spain, where we are celebrating the discovery of the New World just five centuries ago, in Leonardo's age. Both the quality of the Conference and the compromise between Practice and Theory are due to the credit of all the DEXA 92 authors.
