Ian McKellen Garry O'Connor,2019-11-26 The definitive biography of Sir Ian McKellen from an acclaimed biographer In 2001, Ian McKellen put on the robe and pointed hat of a wizard named Gandalf and won a place in the hearts of Tolkien fans worldwide. Though his role in the film adaptation of Lord of the Rings introduced him to a new audience, McKellen had a thriving career a lifetime before his visit to Middle Earth. He made his West End acting debut in 1964 in James Saunders's A Scent of Flowers, but it was in 1980 that he took Broadway by storm when he played Antonio Salieri in Peter Shaffer's Tony-Award-winning play Amadeus. He has starred in over four hundred plays and films and he is that rare character: a celebrity whose distinguished political and social service has transcended his international fame to reach beyond the stage and screen. The breadth of his career—professional, personal and political—has been truly staggering: Macbeth (opposite Judi Dench), Iago, King Lear, Chekhov's Sorin in The Seagull and Becket's tramp Estragon (opposite Patrick Stewart) in Waiting for Godot. Add to all this his tireless political activism in the cause of gay equality and you have a veritable phenomenon. Garry O'Connor's Ian McKellen: A Biography probes the heart of the

Advances in Chemical Conversions for Mitigating Carbon Dioxide T. Inui,M. Anpo,K. Izui,S. Yanagida,T. Yamaguchi,1998-03-12 Global environmental problems, especially global warming caused by the accelerative accumulation of carbon dioxide in the atmosphere, are of great importance for humans. The world's population is now approaching 6 billion, and is still increasing. Developments in communication systems and transportation tools have made the circulation of information, technologies and materials easier, which results in rapid economic growth, particularly in the East and Southeastern Asian countries. Increased affluence leads to an increased consumption of fossil fuels. Inevitably, this leads to an increase in carbon dioxide emission and environmentally hazardous materials which in turn precipitates climatic changes on a global scale. Recent studies showed that the increase in carbon dioxide emission for last year was the highest in the past seven years, and the total amount of carbon dioxide emission from all over the world reached 6.5 billion tons. Furthermore, one cannot overlook the report which appeared recently in Nature, that the floor-area of the iceberg in the South Pole has already decreased by 25% in the past five decades. Over 260 scientists and engineers from 21 countries who had a strong interest and wished to contribute to solve the carbon dioxide problem attended this conference. The papers presented in this volume cover most of the possibilities of the chemical conversion of carbon dioxide.
