Fundamentals and Source Characteristics of Renewable Energy Systems Radian Belu,2019-09-10 This textbook is intended for an audience with little or no power engineering or renewable energy background. The book covers electric energy from alternative energy sources, including solar, wind, water, hydropower, geothermal, and ocean energy. Core issues discussed include wind and solar resource estimates and analysis, solar thermal systems, solar collectors, photovoltaics, wind turbines, geothermal energy, energy small hydropower, wave, tide and ocean energy, and characteristics of energy conversion, control, and electrical aspects. This is one of the most comprehensive textbooks for students, engineers, and professionals who study renewable energy. There are several questions and problems, presented with increasing difficulty, most of which focus on practical applications. The materials and problems are drawn from the author's extensive experience in renewable energy analysis, assessment, design, control, and the power electronics of wind and solar energy conversion systems. Each section of the book contains several solved examples, as well as practical and advanced discussions, that instill critical thinking and apply to industrial applications. The book is divided into eight chapters and covers the most important aspects of renewable energy sources and technologies.

Physics of High-Temperature Reactors Luigi Massimo,2013-10-22 Physics of High-Temperature Reactors focuses on the physics of high-temperature reactors (HTRs) and covers topics ranging from fuel cycles and refueling strategies to neutron cross-sections, transport and diffusion theory, and resonance absorption. Spectrum calculations and cross-section averaging are also discussed, along with the temperature coefficient and reactor control. Comprised of 16 chapters, this book begins with a general description of the HTR core as well as its performance limitations. The next chapter deals with general considerations about HTR physics, including quantities to be determined and optimized in the design of nuclear reactors. Potential scattering and resonance reactions between neutrons and atomic nuclei are then considered, together with basic aspects of transport and diffusion theory. Subsequent chapters explore methods for solving the diffusion equation; slowing-down and neutron thermalization in graphite; HTR core design, fuel management, and cost calculations; and core dynamics and accident analysis. The final chapter describes the sequence of reactor design calculations. This monograph is written primarily for students of HTR physics who are preparing to enter the field as well as technologists of other disciplines who are working on the system.

Optimal Power Flow Using FACTS Devices L. Ashok Kumar,K. Mohana Sundaram,2020-12-03 Optimal Power Flow Using FACTS Devices: Soft

Computing Techniques develops intelligent algorithms to analyze optimal power flow (OPF) and to enhance the power transfer capability of the transmission line with reduced congestion. By providing elaborate studies on FACTS devices and by using soft computing metaheuristics algorithms such as Firefly, Cuckoo, Flower Pollination, and others., this book enables readers to know about algorithms in real-time power system applications and damping of subsynchronous resonance (SSR) oscillations. Key features of this book include: Offers comprehensive review of FACTS devices and the importance of soft computing techniques for solving OPF. Describes the various problems associated with power system operation and control. Addresses issues of SSR in power systems and proposes soft techniques for SSR analysis in power systems. Demonstrates of the importance of SSR and congestion management using intelligent FACTS devices as part of OPF. Covers power systems' reliability, quality, cost-effectiveness, effects on customer goodwill, and pollution limits, including the deregulation of markets and different intelligent controllers. Optimal Power Flow Using FACTS Devices: Soft Computing Techniques is aimed at researchers and professionals in the field of power systems.

Optimal Control and Geometry: Integrable Systems Velimir Jurdjevic, 2016-07-04 The synthesis of symplectic geometry, the calculus of variations and control theory offered in this book provides a crucial foundation for the understanding of many problems in applied mathematics. Focusing on the theory of integrable systems, this book introduces a class of optimal control problems on Lie groups, whose Hamiltonians, obtained through the Maximum Principle of optimality, shed new light on the theory of integrable systems. These Hamiltonians provide an original and unified account of the existing theory of integrable systems. The book particularly explains much of the mystery surrounding the Kepler problem, the Jacobi problem and the Kovalevskaya Top. It also reveals the ubiquitous presence of elastic curves in integrable systems up to the soliton solutions of the non-linear Schrodinger's equation. Containing a useful blend of theory and applications, this is an indispensable guide for graduates and researchers in many fields, from mathematical physics to space control.

Fresh Meat Jesse Armstrong and Sam Bain, 2012-10-11 The ultimate companion to Fresh Meat, the award-winning Channel 4 comedy by Jesse Armstrong and Sam Bain What's the secret to JP's sexual prowess? How does Howard beat the buffet every time? What does Vod really think about drink, drugs and Salman Rushdie? And will Kingsley's diary spill his true feelings for Josie? (hopefully not as stomach-churning as Oregon's sext messages with Professor Shales...) Edited by Oregon, and with contributions from all of the housemates, this is a real guide to student life - the one the preachy brochures and prospectuses don't tell you about. From moving into a student house to fresher's week, from choosing courses to choosing friends, the book records every detail - hilarious, sordid, poignant and triumphant - as the young ones stumble through university life. A scrap book of diary entries, manifestos, diagrams and guidelines it includes: JP's weekly shopping list and first Hollywood screenplay, Josie's student recipes for 'Munge' (and 'Chunge'), Vod's literary criticism and hangover cure, Howard's James Bond fan-fiction, Oregon's literary erotica and Kingsley's band reviews and critique of the Ultimate Frisbee Society. 'A worthy successor to The Inbetweeners ... the best programme about students since The Young Ones' Daily Telegraph on FRESH MEAT 'I never thought I'd enjoy reliving the abject horror of my student days quite as much as I have' Guardian on Fresh Meat 'This book's main purpose is to encourage having a laugh, but, like the best laughs, it is based on facts that ring true' Evening Standard Jesse Armstrong and Sam Bain are British comedy writers, who met whilst studying at Manchester University. They have collaborated on acclaimed television comedy shows such as Smack the Pony, Peep Show and That Mitchell and Webb Look, and the films Magicians and Four Lions. Jesse Armstrong also co-wrote the BAFTA winning The Thick of It and In the Loop. Fresh Meat won Best New Comedy at the British Comedy Awards in 2011.

Web, Artificial Intelligence and Network Applications Leonard Barolli, Flora Amato, Francesco Moscato, Tomoya Enokido, Makoto Takizawa, 2020-03-30 This proceedings book presents the latest research findings, and theoretical and practical perspectives on innovative methods and development techniques related to the emerging areas of Web computing, intelligent systems and Internet computing. The Web has become an important source of information, and techniques and methodologies that extract quality information are of paramount importance for many Web and Internet applications. Data mining and knowledge discovery play a key role in many of today's major Web applications, such as e-commerce and computer security. Moreover, Web services provide a new platform for enabling service-oriented systems. The emergence of large-scale distributed computing paradigms, such as cloud computing and mobile computing systems, has opened many opportunities for collaboration services, which are at the core of any information system. Artificial intelligence (AI) is an area of computer science that builds intelligent systems and algorithms that work and react like

humans. AI techniques and computational intelligence are powerful tools for learning, adaptation, reasoning and planning, and they have the potential to become enabling technologies for future intelligent networks. Research in the field of intelligent systems, robotics, neuroscience, artificial intelligence and cognitive sciences is vital for the future development and innovation of Web and Internet applications.
