Information Modelling and Knowledge Bases XI Eiji Kawaguchi, Hannu Kangassalo, H. Jaakkola, 2000 This is the tenth volume in a series on information modelling and knowledge bases. The topics of the articles cover a wide variety of themes in the domain of information modelling, design and specification of information systems and knowledge bases, ranging from foundations and theories to systems construction and application studies. The contributions in this volume represent the following major themes: models in intelligent activity; concept modelling and conceptual modelling; conceptual modelling and information requirements specification; collections of concepts, knowledge base design, and database design; human-computer interaction and modelling; software engineering and modelling; and applications.

Limit Theorems for Randomly Stopped Stochastic Processes Dmitrii S. Silvestrov, 2012-12-06 This volume is the first to present a state-of-the-art overview of this field, with many results published for the first time. It covers the general conditions as well as the basic applications of the theory, and it covers and demystifies the vast and technically demanding Russian literature in detail. Its coverage is thorough, streamlined and arranged according to difficulty.

Solution Thermodynamics and its Application to Aqueous Solutions Yoshikata Koga, 2007-11-12 As the title suggests, we introduce a novel differential approach to solution thermodynamics and use it for the study of aqueous solutions. We evaluate the quantities of higher order derivative than the normal thermodynamic functions. We allow these higher derivative data speak for themselves without resorting to any model system. We thus elucidate the molecular processes in solution, (referred to in this book “mixing scheme”), to the depth equal to, if not deeper, than that gained by spectroscopic and other methods. We show that there are three composition regions in aqueous solutions of non-electrolytes, each of which has a qualitatively distinct mixing scheme. The boundary between the adjacent regions is associated with an anomaly in the third derivatives of G . The loci of the anomalies in the temperature-composition field form the line sometimes referred to as “Koga line”. We then take advantage of the anomaly of a third derivative quantity of 1-propanol in the ternary aqueous solution, 1-propanol – sample species – H_2O . We use its induced change as a probe of the effect of a sample species on H_2O . In this way, we clarified what a hydrophobe, or a hydrophile, and in turn, an amphiphile, does to H_2O . We also apply the same methodology to ions that have been ranked by the Hofmeister series. We show that the kosmotropes (salting out, or stabilizing agents) are either hydrophobes or hydration centres, and that chaotropes (salting in, or destabilizing agents) are hydrophiles. A new differential approach to solution thermodynamics A particularly clear elucidation of the mixing schemes in aqueous solutions A clear understandings on the effects of hydrophobes, hydrophiles, and amphiphiles to H_2O A clear understandings on the effects of ions on H_2O in relation to the Hofmeister effect A new differential approach to studies in multi-component aqueous solutions

Gajender Sharma,2020-01-14 The book is a science fiction genre and introduces how society will look like in year 2130-2169 from the point of view of human, robots and holohumans being part of the same eco-system and within that context the main character Ztocmi, who is leading scientist on earth has a mission to create an artificial earth looking like planet called as Earth Resort in the book. Ztocmi together with 3000 scientists from Earth, Mars and Moon would like to put the Earth Resort into orbit between Sun and Mars with the help of 1000 satellites and memory metals. In his mission he seeks support from leading scientist from Moon SuperMo and leading scientist SuperMa from Mars. Also 2nd leading character is Zoi who is the most dynamic women on earth in year 2159 supporting Ztocmi to fulfill the mission. The whole mission has taken 20 years and during this time Ztocmi, Zoi has faced some serious issues and they have solved it with other scientists and finally the month of June 2169 has arrived when the earth resort should be placed in the orbit. The Birth of Chinese Feminism Lydia He Liu, Rebecca E. Karl, Dorothy Ko, 2013 The book repositions He-Yin Zhen as central to the development of feminism in China, juxtaposing her writing with fresh translations of works by two of her better-known male interlocutors. The editors begin with a detailed portrait of He-Yin Zhen's life and an analysis of her thought in comparative terms. They then present annotated translations of six of her major essays, as well as two foundational tracts by her male contemporaries, Jin Tianhe (1873-1947) and Liang Qichao (1873-1929), to which He-Yin's work responds and with which it engages. Jin Tianhe, a poet and educator, and Liang Qichao, a philosopher and journalist, understood feminism as a paternalistic cause that enlightened male intellectuals like themselves should defend. Zhen counters with an alternative conception of feminism that draws upon anarchism and other radical trends in thought.

Emerging Contaminants from Industrial and Municipal Waste Damià Barceló, Mira Petrovic, 2008-11-04 This book focuses on innovative treatment technologies for the elimination of emerging contaminants in wastewater and drinking water treatment processes. The book also discusses sources and occurrence of emerging contaminants in municipal and industrial waste, giving an overview of state-of-the-art analytical methods for their identification. Further important aspects covered include the acute and chronic effects and overall impact of emerging contaminants on the environment.

The European Union: Integration and Enlargement R. Daniel Kelemen, Anand Menon, Jonathan Slapin, 2016-04-14 This book explores

one of the central challenges facing the EU today – how to reconcile enlargement with the pursuit of a stronger and more effective European Union. While the relationship between widening and deepening has been recognized for years as one of the big questions in the field of European integration, existing theoretical and empirical analyses of this relationship suffer from a variety of shortcomings. This book brings together a group of EU scholars who significantly advance our understanding of the relationship between widening and deepening. The contributors challenge a variety of ‘common wisdoms’ concerning the relationship between widening and deepening and offer nuanced theoretical and empirical analysis of the relationship between these two vital dimensions of European integration. Collectively, the contributors to this volume offer the most comprehensive picture available to date of the multi-faceted relationship between widening and deepening. This book was published as a special issue of the Journal of European Public Policy.

Cohesive Properties of Semiconductors under Laser Irradiation L.D. Laude,2012-12-06 The impact of Materials Science in our environment has probably never been as massive and decisive as it is today. In every aspect of our lives, progress has never been so dependent on the techniques involved in producing ever more sophisticated materials in ever larger quantities, nor so demanding for technologists to imagine novel processes and circumvent difficulties, or take up new challenges. Every technique is based on a physical process which is put into practice and optimized. The better we know that process, the better the optimization, and more powerful the technique. Laser processing of materials is inscribed in that context. As soon as powerful coherent light sources were made available, it was realized that such intense sources of energy could be used to heat, melt and crystallize materials, i.e., to promote phase transitions in atomic systems. As early as 1964, attempts in that direction were made but received very little (if any) attention. Reasons for this lack of interest were several. For one thing, laser technology was not fully developed, so that the process offered poor reliability and no versatility. Also, improving the existing techniques was believed to be sufficient to meet the needs of the time, and there was no real motivation to explore new ways. Finally, and more important, the fundamentals of the physics behind the scenes were, and continue to be, way out of the runni~g stream.
