Rainforest Tony Juniper, 2019-09-19 Rainforests have long been recognized as hotspots of biodiversity--but they are crucial for our planet in other surprising ways. Not only do these fascinating ecosystems thrive in rainy regions, they create rain themselves, and this moisture is spread around the globe. Rainforests across the world have a powerful and concrete impact, reaching as far as America's

Great Plains and central Europe. In *Rainforest: Dispatches from Earth's Most Vital Frontlines*, a prominent conservationist provides a comprehensive view of the crucial roles rainforests serve, the state of the world's rainforests today, and the inspirational efforts underway to save them. In *Rainforest*, Tony Juniper draws upon decades of work in rainforest conservation. He brings readers along on his journeys, from the thriving forests of Costa Rica to Indonesia, where palm oil plantations have supplanted much of the former rainforest. Despite many ominous trends, Juniper sees hope for rainforests and those who rely upon them, thanks to developments like new international agreements, corporate deforestation policies, and movements from local and Indigenous communities. As climate change intensifies, we have already begun to see the effects of rainforest destruction on the planet at large. *Rainforest* provides a detailed and wide-ranging look at the health and future of these vital ecosystems. Throughout this evocative book, Juniper argues that in saving rainforests, we save ourselves, too.

Lost Worlds Bruce M. Beehler, 2008-10-01 Perhaps it is not possible to experience all the mysterious sounds, the unfamiliar smells, and the spectacular sights of a tropical rainforest without ever visiting one. But this exhilarating and honest book comes wondrously close to taking the reader on such a journey. Bruce M. Beehler, a widely traveled expert on birds and tropical ecology, recounts fascinating details from twelve field trips he has taken to the tropics over the past three decades. As a researcher, he brings to life the exotic rainforests and the people who inhabit them; as a conservationist, he makes a plea for better ways of managing rainforests a resource that the world cannot do without. Drawing on his experiences in Papua New Guinea, India, Madagascar, Indonesia, the Philippines, Panama, and the Ivory Coast, Beehler describes the surprises both pleasant and unpleasant of doing science and conservation in the field. He explains the role that rainforests play in

the lives of indigenous peoples and the crucial importance of understanding local cultures, customs, and politics. The author concludes with simple but tough solutions for maintaining rainforest health, expressing fervent hope that his great-grandchildren and others may one day also hear the rainforest whisper its secrets.

Tropical Rainforest Responses to Climatic Change Mark B. Bush, John R. Flenley, John Flenley, 2007 The goal of this book is to provide a current overview of the impacts of climate change on tropical forests, to investigate past, present, and future climatic influences on the ecosystems with the highest biodiversity on the planet. Tropical Rainforest Responses to Climatic Change will be the first book to examine how tropical rain forest ecology is altered by climate change, rather than simply seeing how plant communities were altered. Shifting the emphasis onto ecological processes e.g. how diversity is structured by climate and the subsequent impact on tropical forest ecology, provides the reader with a more comprehensive coverage. A major theme of this book that emerges progressively is the interaction between humans, climate and forest ecology. While numerous books have appeared dealing with forest fragmentation and conservation, none have explicitly explored the long term

occupation of tropical systems, the influence of fire and the future climatic effects of deforestation, coupled with anthropogenic emissions. Incorporating modelling of past and future systems paves the way for a discussion of conservation from a climatic perspective, rather than the usual plea to stop logging.

The Rainforest John Lockyer, 2021-04-30 Our world needs rainforests. The plants in rainforests help to clean our air and replace the oxygen we breathe. Without rainforests our planet would die. In hot countries, they are called tropical rainforests. Do you know where in the world the rainforests are?
