Thompson, Dodi Poulos, 2024-02-26 Neuro-Ed Assessment and Screeners are fast and effective assessment forms for busy mental health and educational professionals. These practical assessments were created by practitioners who know the needs of professionals working in the field. The purpose of these assessments is to evaluate school-aged students for various disorders and difficulties as quickly and accurately as possible. These screeners provide a 360-degree view of a student's problem by utilizing parent, staff, and student rating forms. The pragmatic design of studies ensures high external validity and generalizability for the test results. The book includes a wealth of data on previously presented studies, as well as hitherto unreported test measures ("Number needed" metrics). It presents recently described and new diagnostic metrics (Likelihood to be diagnosed or misdiagnosed; Summary utility index; Number needed for screening utility); data from new studies on screeners (Attended with sign; Free-Cog; Two question depression screener; Jenkins Sleep Questionnaire; Triple test); and previously unpublished data (combination of SMC Likert and MACE; IADL Scale and MMSE).
