Intercultural User Interface Design Rüdiger Heimgärtner,2019-06-25 The path for developing an internationally usable product with a human-machine interface is described in this textbook, from theory to conception and from design to practical implementation. The most important concepts in the fields of philosophy, communication, culture and Ethnocomputing as the basis of intercultural user interface design are explained. The book presents directly usable and implementable knowledge that is relevant for the processes of internationalization and localization of software. Aspects of software ergonomics, software engineering and human-centered design are presented in an intercultural context; general and concrete recommendations and checklists for immediate use in product design are also provided. Each chapter includes the target message, its motivation and theoretical justification as well as the practical methods to achieve the intended benefit from the respective topic. The book opens with an introduction illuminating the background necessary for taking culture into account in Human Computer Interaction (HCI) design. Definitions of concepts are followed by a historical overview of the importance of taking culture into account in HCI design. Subsequently, the structures, processes, methods, models, and approaches concerning the relationship between culture and HCI design are illustrated to cover the most important questions in practice.

Population Biobank Studies: A Practical Guide Zhengming Chen,2020-12-09 This book describes some of the key epidemiological principles, scientific approaches and

quality assurance frameworks required to design and conduct biobank studies in various settings. Using examples from contemporary biobanks, the book addresses the design features and practical procedures needed in order to launch and manage biobank studies, including consent and regulatory approval, the organisation of field work, management of data and biological samples, follow-up and verification of disease outcomes, development of IT systems for data collection, quality assurance and study management. Over the last two decades, several large biobank studies have been initiated in different populations, intended to greatly enhance the development of precision medicine. Contemporary biobank studies are extremely large and complex, and involve several decades of follow-up. Such studies pose major challenges in terms of ensuring rapid recruitment, obtaining high-quality data, minimising loss to follow-up, reliably classifying disease outcomes, and optimising the use of the biological samples collected. In this regard, the key to success lies not in planning the perfect study, but in planning the most appropriate, reliable, sustainable and future-proof study given the practical constraints of available resources, time and capacity. The authors of this handbook are epidemiologists, clinicians, software engineers, and laboratory and data scientists with extensive experience in conducting large biobank studies. The eight chapters can be read separately or together, and provide readers with essential information on how to design, implement and manage these studies. The state-of-the-art, innovative and scalable approaches and methodologies presented here are intended to stimulate the development of further population-based and hospital-based biobank studies in diverse populations.

Institutional Translator Training Tomáš Svoboda, Łucja Biel, Vilelmini

Sosoni, 2022-12-30 This collection surveys the translator training landscape in international organizations on a global scale, offering a state-of-the-art view on institutional translator training research and practical takeaways for stakeholders. The volume's focus on training

brings a unique perspective to existing research on institutional translation, which has tended to single out such themes as agency, professionalism, and quality. The book is divided into three sections, with the first outlining the competences required of institutional translators, the second exploring training practices at the university level and on the job, for novices and professionals, across a range of settings, and the third providing a synthesis of the above. Contributions draw on findings from studies in both institutional desiderata and existing training programmes from diverse geographic contexts towards situating the discussion through a global lens. In linking together competences and training practices, the book enhances collective knowledge of institutional translation and provides valuable insights for universities and institutions that work with translators on both international and national scales. This book will be key reading for scholars in translation studies, particularly those interested in institutional translation and translator training, as well as active professionals. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons [Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND)] 4.0 license.

Informationsstrukturierung in chinesischen und deutschen Texten Jing Jin, 2015 Die unterschiedliche Informationsstrukturierung chinesischer und deutscher Texte bildet den Ausgangspunkt dieser Untersuchung. Während in der deutschen Kultur eine gewisse 'Direktheit' in der Themenentfaltung erwartet wird, wird in der chinesischen Kultur in ähnlichen Situationen eine stärkere 'Indirektheit' verlangt. In der Übersetzungspraxis wird diesen Unterschieden bis jetzt leider immer noch zu wenig Aufmerksamkeit geschenkt. Die meisten deutschsprachigen Übersetzungen chinesischer induktiver Texte sind hinsichtlich der Informationsstruktur ausgangstextnahe Übersetzungen. In dieser Arbeit wird zum ersten Mal die Problematik der unterschiedlichen Textorganisation von chinesischen und deutschen Firmen-Selbstdarstellungen im Internet aus der Perspektive der Übersetzungswissenschaft diskutiert. Ihre Ergebnisse können auch für die Untersuchung der Übersetzungsprobleme chinesischer induktiv strukturierter Texte in andere westliche Sprachen, deren Textorganisation deduktiv ist, von Nutzen sein.

Translation and Localisation in Video Games Miguel Á. Bernal-Merino, 2014-09-19

This book is a multidisciplinary study of the translation and localisation of video games. It offers a descriptive analysis of the industry – understood as a global phenomenon in entertainment – and aims to explain the norms governing present industry practices, as well as game localisation processes. Additionally, it discusses particular translation issues that are unique to the multichannel nature of video games, in which verbal and nonverbal signs must be cohesively combined with interactivity to achieve maximum playability and immerse players in the game's virtual world. Although positioned within the theoretical framework of descriptive translation studies, Bernal-Merino incorporates research from audiovisual translation, software localisation, computer assisted translation, comparative literature, and video game production. Moving beyond this framework, Translation and Localisation in Video Games challenges some of the basic tenets of translation studies and proposes changes to established and unsatisfactory processes in the video game and language services industries.

Translator's Workbench Marianne Kugler, Khurshid Ahmad, Gregor Thurmair, 2013-11-09

The Translator's Workbench Project was a European Community sponsored research and

development project which dealt with issues in multi-lingual communication and documentation. This book presents an integrated toolset as a solution to problems in translation and documentation. Professional translators and teachers of translation were involved in the process of software development, starting with a detailed study of the user requirements and ending with several evaluation-and-improvement cycles of the resulting toolset. English, German, Greek, and Spanish are addressed in the contributions, however, some of the techniques are inherently language-independent and can thus be extended to cover other languages as well. Translation can be viewed broadly as the execution of three cognitive processes, and this book has been structured along these lines: • First, the translation pre-process, understanding the target language text at a lexico semantic level on the one hand, and making sense of the source language document on the other hand. The tools for the pre-translation process include access to electronic networks, conversion of documents from one format to another, creation of terminology data banks and access to existing data banks, and terminology dictionaries. • Second, the translation process, rendering sentences in the source language into equivalent target sentences. The translation process refers to the potential of conventional machine translation systems, like METAL, and of the statistically oriented translation memory.

Advances in Culturally-Aware Intelligent Systems and in Cross-Cultural Psychological Studies Colette Faucher, 2018-09-01 This book offers valuable new insights into the design of culturally-aware systems. In its first part, it is devoted to presenting selected Culturally-Aware Intelligent Systems devised in the field of Artificial Intelligence and its second part consists of two sub-parts that offer a source of inspiration for building

modelizations of Culture and of its influence on the human mind and behavior, to be used in new Culturally-Aware Intelligent Systems. Those sub-parts present the results of experiments conducted in two fields that study Culture and its influence on the human mind's functions: Cultural Neuroscience and Cross-Cultural Psychology. In this era of globalization, people from different countries and cultures have the opportunity to interact directly or indirectly in a wide variety of contexts. Despite differences in their ways of thinking and reasoning, their behaviors, their values, lifestyles, customs and habits, languages, religions – in a word, their cultures – they must be able to collaborate on projects, to understand each other's views, to communicate in such a way that they don't offend each other, to anticipate the effects of their actions on others, and so on. As such, it is of primary importance to understand how culture affects people's mental activities, such as perception, interpretation, reasoning, emotion and behavior, in order to anticipate possible misunderstandings due to differences in handling the same situation, and to try and resolve them. Artificial Intelligence, and more specifically, the field of Intelligent Systems design, aims at building systems that mimic the behavior of human beings in order to complete tasks more efficiently than humans could by themselves. Consequently, in the last decade, experts and scholars in the field of Intelligent Systems have been increasingly tackling the notion of cultural awareness. A Culturally-Aware Intelligent System can be defined as a system where Culture-related or, more generally, socio-cultural information is modeled and used to design the human-machine interface, or to provide support with the task carried out by the system, be it reasoning, simulation or any other task involving cultural knowledge.
