Sites Unseen Scott Frickel,James R. Elliott,2018-07-03 From a dive bar in New Orleans to a leafy residential street in Minneapolis, many establishments and homes in cities across the nation share a troubling and largely invisible past: they were once sites of industrial manufacturers, such as plastics factories or machine shops, that likely left behind carcinogens and other hazardous industrial byproducts. In Sites Unseen, sociologists Scott Frickel and James Elliott uncover the hidden histories of these sites to show how they are regularly produced and reincorporated into urban landscapes with limited or no regulatory oversight. By revealing this legacy of our industrial past, Sites Unseen spotlights how city-making has become an ongoing process of social and environmental transformation and risk containment. To demonstrate these dynamics, Frickel and Elliott investigate four very different cities—New Orleans, Minneapolis, Philadelphia, and Portland, Oregon. Using original data assembled and mapped for thousands of former manufacturers' locations dating back to the 1950s, they find that more than 90 percent of such sites have now been converted to urban amenities such as parks, homes, and storefronts with almost no environmental review. And because manufacturers tend to open plants on new, non-industrial lots rather than on lots previously occupied by other manufacturers, associated hazards continue to spread relatively unabated. As they do, residential turnover driven by gentrification and the rising costs of urban living further obscure these sites from residents and regulatory agencies alike. Frickel and Elliott show that these hidden processes have serious consequences for city-dwellers. While minority and working class neighborhoods are still more likely to attract hazardous manufacturers, rapid turnover in cities means that whites and middle-income groups also face increased risk. Since government agencies prioritize managing polluted sites that are highly visible or politically expedient, many former manufacturing sites that now have other uses remain invisible. To address these oversights, the authors advocate creating new municipal databases that identify previously undocumented manufacturing sites as potential environmental hazards. They also suggest that legislation limiting urban sprawl might reduce the flow of hazardous materials beyond certain boundaries. A wide-ranging synthesis of urban and environmental scholarship, Sites Unseen shows that creating sustainable cities requires deep engagement with industrial history as well as with the social and regulatory processes that continue to remake urban areas through time. A Volume in the American Sociological Association's Rose Series in Sociology.

Strategies for Accelerating Cleanup at Toxic Waste Sites Scott Marshall Payne,1997-12-29 Accelerating Cleanup at Toxic Waste Sites: Fast-tracking Environmental Actions and Decision Making presents truly innovative advances in investigative and cleanup technologies, offering valuable solutions that streamline the data collection process, speed up the time it takes to characterize a site, and expedite decision making. Using easy to understand graphic displays, tables, text summaries, and real world case studies, and by synthesizing technical and regulatory reference information crucial to the development of effective cleanup strategies, this book provides the framework for environmental professionals to develop project and program approaches that meet today's needs. An advanced text for those with at least basic understanding of environmental investigation, cleanup, regulations, decision making, and policy development, Accelerating Cleanup at Toxic Waste Sites addresses the human side of the environmental industry and why it is perhaps one of the most important considerations for successful accelerated cleanup. This book takes the next step by providing managers, project teams, and other professionals with approaches that bring techniques, regulations, strategies, and people together into one comprehensive package that works.

The Undergraduate's Companion to Arab Writers and Their Web Sites Dona S. Straley,2004-08-30 This companion provides information on the lives and works of about 150 authors

who write primarily in Arabic, covering the first known works of Arabic literature in the 5th and 6th centuries A.D. to the present day. While concentrating on literary authors, writers from the fields of history, geography, and philosophy are also represented. The individuals represented were chosen primarily from the Encyclopedia of Arabic Literature. Among the major authors are Najib Mahfuz, the 1988 Nobel laureate; Nawal Saadawi, the Egyptian physician who is the leading female literary author in the Arab world and the most frequently translated into English; Abu al-Ala' al-Ma'arri, the 11th century poet whose verses are taught to every Arab schoolchild; and Avicenna, the great physician and philosopher, transmitter and interpreter of Aristotle, whose work on medicine was long the standard not only in the Middle East but also (in Latin translation) in Europe. In addition, entries will be included for the anonymous romances so common in Arabic literature, such as The Arabian Nights, a cycle of stories perhaps even better known in the West than in the Arab world. Interest in the history and culture of the Arab world at U.S. universities has taken a quantum leap since the events of September 11, 2001. In this book, the author demonstrates that at least three major, distinct literary and cultural traditions are included within the fields of Middle Eastern and Islamic studies—Arabic, Persian, and Turkic. The Arabic tradition is the oldest, largest, and most widely dispersed. Undergraduate courses in Arabic literature and culture are now being taught at both lower- and upper-levels at many universities. Such courses are often used by undergraduates to fulfill basic educational requirements for their degrees. Students in such courses often have difficulty finding information on Arab writers, and this volume fills the void.

The Frozen Saqqaq Sites of Disko Bay, West Greenland - Qeqertasussuk and Qajaa (2400-900 BC) Bjarne Grønnow,2017-03-01 Qeqertasussuk and Qajaa are the only known sites of the Early Arctic Small Tool tradition in the Eastern Arctic, where all kinds of organic materials - wood, bone, baleen, hair, skin - are preserved in permafrozen culture layers. Together, the sites cover the entire Saqqaq era in Greenland (c. 2400-900 BC). Technological and contextual analyses of the excellently preserved archaeological materials from the frozen layers form the core of this publication. Bjarne Grønnow draws a new picture of a true Arctic pioneer society with a remarkably complex technology. The Saqqaq hunting tool kit, consisting of bows, darts, lances, harpoons, and throwing boards as well as kayak-like sea-going vessels, is described for the first time. A wide variety of hand tools and household utensils as well as lithic and organic refuse and animal bones were found on the intact floor of a midpassage dwelling at Qeqertasussuk. These materials provide entirely new information on the daily life and subsistence of the earliest hunting groups in Greenland. Comparative studies put the Saqqaq Culture into a broad cultural-historical perspective as one of the pioneer societies of the Eastern Arctic.

The Tutu Archaeological Village Site Elizabeth Righter,2003-09-02 Excavations at the Tutu site represent a dramatic chapter in the annals of Caribbean archaeological excavation. The site was discovered in 1990 during the initial site clearing for a shopping mall in St. Thomas, U.S. Virgin Islands. The site was excavated with the assistance of a team of professional archaeologists and volunteers. Utilizing resources and funds donated by the local scientific communities, the project employed a multidisciplinary sampling strategy designed to recover material for analysis by experts

in fields such as anthropology, archaeology, palaeobotany, zooarchaeology, bioarchaeology, palaeopathology and photo imaging. This volume reports the results of these various applied analytical techniques laying a solid foundation for future comparative studies of prehistoric Caribbean human populations and cultures.

High Performance Web Sites Steve Souders,2007-09-11 Want your web site to display more quickly? This book presents 14 specific rules that will cut 25% to 50% off response time when users request a page. Author Steve Souders, in his job as Chief Performance Yahoo!, collected these best practices while optimizing some of the most-visited pages on the Web. Even sites that had already been highly optimized, such as Yahoo! Search and the Yahoo! Front Page, were able to benefit from these surprisingly simple performance guidelines. The rules in High Performance Web Sites explain how you can optimize the performance of the Ajax, CSS, JavaScript, Flash, and images that you've already built into your site -- adjustments that are critical for any rich web application. Other sources of information pay a lot of attention to tuning web servers, databases, and hardware, but the bulk of display time is taken up on the browser side and by the communication between server and browser. High Performance Web Sites covers every aspect of that process. Each performance rule is supported by specific examples, and code snippets are available on the book's companion web site. The rules include how to: Make Fewer HTTP Requests Use a Content Delivery Network Add an Expires Header Gzip Components Put Stylesheets at the Top Put Scripts at the Bottom Avoid CSS Expressions Make JavaScript and CSS External Reduce DNS Lookups Minify JavaScript Avoid Redirects Remove Duplicates Scripts Configure ETags Make Ajax Cacheable If you're building pages for high traffic destinations and want to optimize the experience of users visiting your site, this book is indispensable. If everyone would implement just 20% of Steve's guidelines, the Web would be adramatically better place. Between this book and Steve's YSlow extension, there's reallyno excuse for having a sluggish web site anymore. -Joe Hewitt, Developer of Firebug debugger and Mozilla's DOM Inspector Steve Souders has done a fantastic job of distilling a massive, semi-arcane art down to a set of concise, actionable, pragmatic engineering steps that will change the world of web performance. -Eric Lawrence, Developer of the Fiddler Web Debugger, Microsoft Corporation
