Ontology of God TechGenie Media,2008-04 Echoing through time are the voices of ancient people telling us about God. From Mesopotamia and Egypt 5000 years ago, often from even earlier oral traditions, every civilization has been inspired to tell us about God. Their voices vary widely and even conflict. Is there a common message that they thought was so important that they had to pass it on? In this book, the ancient voices speak. This study follows the thread of the basic religious concepts of law, mercy, and love that are prominent in many religions. Major religions around the world are investigated up to the launch of the Common Era when most religions had been developed, including religions that later developed independently such as the Mayan. These are messages refined by the fire of experience through the ages. The repeated messages collectively bear the tests of validity. This study also looks at the many methods we use to try to understand God and religious literature. Is the nature of God reflected in what he asks of us? The premise is that it is. By understanding the nature of God, perhaps we can filter out the many competing voices that tell us that God stands for such things as the murder of innocents and destruction. The very nature of religion is illuminated in the light of the voices from the ages. But is ancient religion a path that we have lost, or does history hammer out newer voices to bear the truth of new experience as people try to understand their relationship with God? Dynamics of Glassy, Crystalline and Liquid Ionic Conductors Junko Habasaki, Carlos Leon, K.L. Ngai, 2016-10-19 This book discusses the physics of the dynamics of ions in various ionically conducting materials, and applications including electrical energy generation and storage. The experimental techniques for measurements and characterization, molecular dynamics simulations, the theories of ion dynamics, and applications are all addressed by the authors, who are experts in their fields. The experimental techniques of measurement and characterization of dynamics of ions in glassy, crystalline, and liquid ionic conductors are introduced with the dual purpose of introducing the reader to the experimental activities of the field, and preparing the reader to understand the physical quantities derived from experiments. These experimental techniques include calorimetry, conductivity relaxation, nuclear magnetic resonance, light scattering, neutron scattering, and others. Methods of molecular dynamics simulations are introduced to teach the reader to utilize the technique for practical applications to specific problems. The results elucidate the dynamics of ions on some issues that are not accessible by experiments. The properties of ion dynamics in glassy, crystalline and liquid ionic conductors brought forth by experiments and simulations are shown to be universal, i.e. independent of physical and chemical structure of the ionic conductor as long as ion-ion interaction is the dominant factor. Moreover these universal properties of ion dynamics are shown to be isomorphic to other complex interacting systems including the large class of glass-forming materials with or without ionic conductivity. By covering the basic concepts, theories/models, experimental techniques and data, molecular dynamics simulations, and relating them together, *Dynamics of Glassy, Crystalline and Liquid Ionic Conductors* will be of great interest to many in basic and applied research areas from the broad and diverse communities of condensed matter physicists, chemists, materials scientists and engineers. The book also provides the fundamentals for an introduction to the field and it is written in such a way that can be used for teaching courses either at the undergraduate or graduate level in academic institutions.

Thinking Ahead - Essays on Big Data, Digital Revolution, and Participatory Market Society Dirk Helbing, 2015-04-10 The rapidly progressing digital revolution is now touching the foundations of the governance of societal structures. Humans are on the verge of evolving from consumers to prosumers, and old, entrenched theories – in particular sociological and economic ones – are falling prey to these rapid developments. The original assumptions on which they are based are being questioned. Each year we produce as much data as in the entire human history - can we possibly create a global crystal ball to predict our future and to optimally govern our world? Do we need wide-scale surveillance to understand and manage the increasingly complex systems we are constructing, or would bottom-up approaches such as self-regulating systems be a better solution to creating a more innovative,

more successful, more resilient, and ultimately happier society? Working at the interface of complexity theory, quantitative sociology and Big Data-driven risk and knowledge management, the author advocates the establishment of new participatory systems in our digital society to enhance coordination, reduce conflict and, above all, reduce the “tragedies of the commons,” resulting from the methods now used in political, economic and management decision-making. The author Physicist Dirk Helbing is Professor of Computational Social Science at the Department of Humanities, Social and Political Sciences and an affiliate of the Computer Science Department at ETH Zurich, as well as co-founder of ETH’s Risk Center. He is internationally known for the scientific coordination of the FuturICT Initiative which focuses on using smart data to understand techno-socio-economic systems. “Prof. Helbing has produced an insightful and important set of essays on the ways in which big data and complexity science are changing our understanding of ourselves and our society, and potentially allowing us to manage our societies much better than we are currently able to do. Of special note are the essays that touch on the promises of big data along with the dangers...this is material that we should all become familiar with!” Alex Pentland, MIT, author of *Social Physics: How Good Ideas Spread - The Lessons From a New Science* Dirk Helbing has established his reputation as one of the leading scientific thinkers on the dramatic impacts of the digital revolution on our society and economy. *Thinking Ahead* is a most stimulating and provocative set of essays which deserves a wide audience.” Paul Ormerod, economist, and author of *Butterfly Economics* and *Why Most Things Fail*. It is becoming increasingly clear that many of our institutions and social structures are in a bad way and urgently need fixing. Financial crises, international conflicts, civil wars and terrorism, inaction on climate change, problems of poverty, widening economic inequality, health epidemics, pollution and threats to digital privacy and identity are just some of the major challenges that we confront in the twenty-first century. These issues demand new and bold thinking, and that is what Dirk Helbing offers in this collection of essays. If even a fraction of these ideas pay off, the consequences for global governance could be significant. So this is a must-read book for anyone concerned about the future. Philip Ball, science writer and author of *Critical Mass* “This collection of papers, brought together by Dirk Helbing, is both timely and topical. It raises concerns about Big Data, which are truly frightening and disconcerting, that we do need to be aware of; while at the same time offering some hope that the technology, which has created the previously unthought-of dangers to our privacy, safety and democracy can be the means to address these dangers by enabling social, economic and political participation and coordination, not possible in the past. It makes for compelling reading and I hope for timely action.”Eve Mitleton-Kelly, LSE, author of *Corporate Governance and Complexity Theory* and editor of *Co-evolution of Intelligent Socio-technical Systems*

The Equality Machine Orly Lobel, 2022-10-18 AN ECONOMIST BEST BOOK OF 2022 At a time when AI and digital platforms are under fire, Orly Lobel, a renowned tech policy scholar, defends technology as a powerful tool we can harness to achieve equality and a better future. Much has been written about the challenges tech presents to equality and democracy. But we can either criticize big data and automation or steer it to do better. Lobel makes a compelling argument that while we cannot stop technological development, we can direct its course according to our most fundamental values. With provocative insights in every chapter, Lobel masterfully shows that digital technology frequently has a comparative advantage over humans in detecting discrimination, correcting historical exclusions, subverting long-standing stereotypes, and addressing the world’s thorniest problems: climate, poverty, injustice, literacy, accessibility, speech, health, and safety. Lobel’s vivid examples—from labor markets to dating markets—provide powerful evidence for how we can harness technology for good. The book’s incisive analysis and elegant storytelling will change the debate about technology and restore human agency over our values.

Musings of a Baby Boomer Kay Hoflander, 2022-04-26 An honest, humorous, and refreshing look back on the experiences of a unique generation and the challenges of growing older in the digital age. *Musings of a Baby Boomer: Life Before X, Y, and Z* is a collection of selected shorts from Hoflander’s weekly newspaper column “Full Circle,” featuring sometimes funny and sometimes philosophical stories with a continuous theme: the reluctant, but generally happy, aging of the Baby Boomer generation. In this collection, Hoflander tells stories about everything from yard flamingos and college move-in day to battling internet bots. She reflects on the simpler times of her childhood and addresses present-day changes to which, as a baby boomer, she adapts: memory loss, evolving

technology, and politics. Through it all, she uses humor and wit to remind readers not to take life too seriously—and to focus on the things that really matter. “This book entails family, friends, and wisdom from the perspective of the baby boomer generation! A great read for all! Delightful.” –Teresa Parson, First Lady of Missouri “America needs healing, and instead of destroying our history, perhaps musings from those who have been part of history can provide a way forward. That is what Kay Hoflander's book offers.” –Lieutenant Colonel Allen B. West (US Army, Retired), Member, 112th U.S. Congress, Former Chairman, Republican Party of Texas “Hoflander has the magical skills to hit upon daily life with humor and understanding . . . For younger readers, this book just may help you better understand your parents or grandparents. It is a book for all generations to enjoy.” –Suzanne Skelly, University of Missouri Graduate Educator, Realtor, Genealogist and life-long Bibliophile
