Curbing Traffic Chris Bruntlett, Melissa Bruntlett, 2021-06-29 In *Curbing Traffic: The Human Case for Fewer Cars in Our Lives*, mobility experts Melissa and Chris Bruntlett chronicle their experience living in the Netherlands and the benefits that result from treating cars as visitors rather than owners of the road. They weave their personal story with research and interviews with experts and Delft locals to help readers share the experience of living in a city designed for people. Their insights will help decision makers and advocates to better understand and communicate the human impacts of low-car cities: lower anxiety and stress, increased independence, social autonomy, inclusion, and improved mental and physical wellbeing. *Curbing Traffic* provides relatable, emotional, and personal reasons why it matters and inspiration for exporting the low-car city.

Traffic Tom Vanderbilt, 2009-08-11 Driving is a fact of life. We are all spending more and more time on the road, and traffic is an issue we face everyday. This book will make you think about it in a whole new light. We have always had a passion for cars and driving. Now *Traffic* offers us an exceptionally rich understanding of that passion. Vanderbilt explains why traffic jams form, outlines the unintended consequences of our attempts to engineer safety and even identifies the most common mistakes drivers make in parking lots. Based on exhaustive research and interviews with driving experts and traffic officials around the globe, *Traffic* gets under the hood of the quotidian activity of driving to uncover the surprisingly complex web of physical, psychological and technical factors that explain how traffic works.

Fighting Traffic Peter D. Norton, 2011-01-21 The fight for the future of the city street between pedestrians, street railways, and promoters of the automobile between 1915 and 1930. Before the advent of the automobile, users of city streets were diverse and included children at play and pedestrians at large. By 1930, most streets were primarily a motor thoroughfare where children did not belong and where pedestrians were condemned as “jaywalkers.” In *Fighting Traffic*, Peter Norton argues that to accommodate automobiles, the American city required not only a physical change but also a social one: before the city could be reconstructed for the sake of motorists, its streets had to be socially reconstructed as places where motorists belonged. It was not an evolution, he writes, but a bloody and sometimes violent revolution. Norton describes how street users struggled to define and redefine what streets were for. He examines developments in the crucial transitional years from the 1910s to the 1930s, uncovering a broad anti-automobile campaign that reviled motorists as “road hogs” or “speed demons” and cars as “juggernauts” or “death cars.” He considers the perspectives of all users—pedestrians, police (who had to become “traffic cops”), street railways, downtown businesses, traffic engineers (who often saw cars as the problem, not the solution), and automobile promoters. He finds that pedestrians and parents campaigned in moral terms, fighting for “justice.” Cities and downtown businesses tried to regulate traffic in the name of “efficiency.” Automotive interest groups, meanwhile, legitimized their claim to the streets by invoking “freedom”—a rhetorical stance of particular power in the United States. *Fighting Traffic* offers a new look at both the origins of the automotive city in America and how social groups shape technological change.

Air Traffic Controller Staffing in the en Route Domain National Research Council (U.S.). Committee for a Review of the En Route Air Traffic Control Complexity and Workload Model,2010 TRB Special Report 301: Air Traffic Controller Staffing in the En Route Domain: A Review of the Federal Aviation Administration's Task Load Model examines the structure, empirical basis, and validation methods of a Federal Aviation Administration model that estimates the time controllers spend performing tasks when handling en route traffic. The model's task load output is being used to inform workforce planning. The committee that developed the report concluded that the model is superior to past models because it takes into account traffic complexity when estimating task load. However, the report recommends that more operational and experimental data on task performance be obtained to establish and validate many key model assumptions, relationships, and parameters.
