The Adaptability of the White Man to Tropical America Ellsworth Huntington, 1914

**Tropical Holland** Henry Albert Willem van Coenen Torchiana, 1921

*Seasonally Dry Tropical Forests* Rodolfo Dirzo, 2011-02-18 *Seasonally Dry Tropical Forests* brings together a range of experts in diverse fields including biology, ecology, biogeography, and biogeochemistry, to review, synthesize, and explain the current state of our collective knowledge on the ecology and conservation of this endangered ecosystem. The book offers a synthetic and cross-disciplinary review of recent work with an expansive scope, including sections on distribution, diversity, ecosystem function, and human impacts. Throughout, contributors emphasize conservation issues, particularly emerging threats and promising solutions, with key chapters on climate change, fragmentation, restoration, ecosystem services, and sustainable use. Seasonally dry tropical forests represent scientific terrain that is poorly explored, and there is an urgent need for increased understanding. This book represents an important step in bringing together the most current scientific information about this vital ecosystem.

**Explore the Tropical Rain Forest** Linda Tagliaferro,2006-09 Discusses the plants, animals, and characteristics of the tropical rain forest biome.

*The Coral Reefs of the Tropical Pacific* Alexander Agassiz,1903

*Tropical Rain Forests of the Far East* Timothy Charles Whitmore,1984 Rain forest ecology. Asia, Southeastern. Forests and forestry.

**Select Extra-tropical Plants Readily Eligible for Industrial Culture Or Naturalization** Ferdinand von Mueller,1884

**Green Imperialism** Richard H. Grove,1996-03-29 The first book to document the origins and early history of environmentalism, especially its colonial and global aspects.

*Tropical Heat* John A. Miller,2003-02-17 When an army officer is found dead in the small town of Hopewell, Virginia, his murder sets in motion a sequence of events that forever changes the life of Sheriff A.G. Farrell, whose investigation is hampered by a strangely hostile provost marshal and the slain officer's enigmatic widow.

*The Tropical Look* Robert Lee Riffle,1998 Meant primarily for gardeners in USDA zones 8 – 10, The Tropical Look encompasses most of the southern U.S. and the West Coast. This groundbreaking encyclopedia of lush plants will also be useful to gardeners in other zones who are interested in growing tropical-looking plants (as opposed to strictly tropical plants, which cannot endure a frost) as half-hardy, annual, or conservatory plants.

Tropical Ecology John C. Kricher,2011-02-28 A comprehensive introduction to

tropical ecology This full-color illustrated textbook offers the first comprehensive introduction to all major aspects of tropical ecology. It explains why the world's tropical rain forests are so universally rich in species, what factors may contribute to high species richness, how nutrient cycles affect rain forest ecology, and how ecologists investigate the complex interrelationships among flora and fauna. It covers tropical montane ecology, riverine ecosystems, savanna, dry forest—and more. Tropical Ecology begins with a historical overview followed by a sweeping discussion of biogeography and evolution, and then introduces students to the unique and complex structure of tropical rain forests. Other topics include the processes that influence everything from species richness to rates of photosynthesis: how global climate change may affect rain forest characteristics and function; how fragmentation of ecosystems affects species richness and ecological processes; human ecology in the tropics; biodiversity; and conservation of tropical ecosystems and species. Drawing on real-world examples taken from actual research, Tropical Ecology is the best textbook on the subject for advanced undergraduates and graduate students. Offers the first comprehensive introduction to tropical ecology Describes all the major kinds of tropical terrestrial ecosystems Explains species diversity, evolutionary processes, and coevolutionary interactions Features numerous color illustrations and examples from actual research Covers global warming, deforestation, reforestation, fragmentation, and conservation The essential textbook for

advanced undergraduates and graduate students Suitable for courses with a field component Leading universities that have adopted this book include: Biola University Bucknell University California State University, Fullerton Colorado State University - Fort Collins Francis Marion University Michigan State University Middlebury College Northern Kentucky University Ohio Wesleyan University St. Mary's College of Maryland Syracuse University Tulane University University of California, Santa Cruz University of Central Florida University of Cincinnati University of Florida University of Missouri University of New Mexico University of North Carolina at Chapel Hill University of the West Indies

**Tropical Ecological Systems** F.B. Golley, E. Medina, 2012-12-06 In 1971 the International Society of Tropical Ecology and the International Association for Ecology held a meeting on Tropical Ecology, with an emphasis on organic production in New Delhi, India. At this meeting a Working Group on Tropical Ecology was organized, consisting of K. C. Misra (India), F. Malaisse (Zaire), E. Medina (Venezuela) and F. Golley (U.S.A.). The object of this Working Group was to stimulate interaction between tropical ecologists through future scientific meetings and other exchanges and communications. A second meeting of ISTE and INTECOL was held in Caracas, Venezuela in 1973, under the direction of Medina and Golley and sponsored by the Department of Ecology, Instituto Venezolano Investigaciones Cientificas (IVIC). The basic structure of the meeting was provided by series of invited papers which

considered topics of special interest from both an applied and theoretical view. These included physiological ecology (Pannier), populations (Rabinovich), tropical savannas (Lamotte), rivers (Sioli), estuaries (Rodriguez), and island ecosystems (Mueller-Dombois). Contributed papers considered details of these and other ecological topics, including the application of ecology to human problems. The present volume includes the invited papers listed above and a sampling of contributed papers which together illustrate the trends of research in tropical ecology. The papers show that tropical ecology is a vigorous subject of research. While the papers in this volume do not provide reviews of all the topics of study in tropical ecology, they do present authoritative statements on progress in the major subject in the field.

Tropical Plants of the World Jens G. Rohwer, 2002 Sumptuous photos show off more than 250 dazzling tropical species from the lush terrain of Southeast Asia, Latin America, Africa...everywhere the climate nurtures seductively fragrant blossoms and luxuriant foliage. The in-depth information on palms, shrubs, vines, herbs, ferns, water plants, and of course, magnificent, vibrant blooms will prove invaluable to gardeners wanting something special.

**Tropical Forests** Thomas K. Rudel, 2005-08-31 In *Tropical Forests*, Rudel analyzes hundreds of local studies from the past twenty years to develop a much-needed, global perspective on deforestation. With separate chapters on individual regions, including South and Central America, the Caribbean, and

Africa, Rudel's work offers an up-to-date assessment of the world's tropical forests. In the concluding chapter, Rudel considers the implications of these trends and describes policy directions for conserving biodiversity and promoting sustainable development in each region.

**Last Stand** Randall A. Kramer, Carel van Schaik, Julie Johnson, 1997 During the past century, tropical rain forests have been reduced to less than half of their original area, with a consequent loss of biodiversity. This book takes a close look at how this has happened and what the consequences may be, with an emphasis on strategies that have proven successful in stemming the loss of plant and animal species. The book highlights the important role of protected areas such as sacred groves, royal preserves, and today's national parks, which have long served to shield the delicate forest habitats for countless species. It argues that, although programs that combine biodiversity protection and human economic development have become increasingly important, a system of protected areas must still be the cornerstone of all conservation strategies aimed at limiting the inevitable reduction of our planet's biodiversity.

**Tropical Oceans** Kelley MacAulay, Bobbie Kalman, 2006 Describes all the life-forms that are supported by tropical oceans, as well as weather patterns over those same oceans.

**Tropical Climates** Cath Senker, 2017 The climate in a region affects all aspects of life. This book looks at tropical climates. It explores the

characteristics of the land and weather in regions with tropical climates, and how plants, animals, and people have adapted to life in tropical regions. The effects of climate change and other developments are also covered.

Small Trees for the Tropical Landscape Fred D. Rauch, Paul R.

Weissich, 2009-07-23 Over the past several decades, the U.S. cityscape has changed radically. Large areas have been cleared of natural vegetation to accommodate new development. The "urban forest," which consists of all city trees, natural and planted, has been severely and negatively impacted. A 2003 study indicates that we are losing through clearing and grading four trees for every one planted. This is a wake-up call for greatly increased planting in the urban forest and the need to popularize small trees (defined as trees that grow up to thirty feet high) for diminished city spaces. Small Trees for the Tropical Landscape describes and illustrates 129 species and subspecies and 48 named varieties, cultivars, and forms plus 23 hybrids appropriate for the home garden and confined public landscape spaces. The authors have also included a section on "Tailored Small Trees," large shrubs that are readily transformed into small trees through intelligent, selective pruning. They identify and describe 67 species and subspecies; 40 named varieties, cultivars, and forms; and 21 hybrids that are appropriate for this conversion. Several appendices will assist the gardener with tree selection for specific purposes (screens and windbreaks, coastal gardens, edible fruit, and colorful flowers and foliage). Species that may cause skin irritation or

that are poisonous are identified in the text as are those trees with the ability to fix nitrogen. The authors also warn against planting a number of species known to be invasive in Hawai'i and advise caution when planting others that have the potential to escape cultivation and become weeds.
