USB Embedded Hosts Jan Axelson,2011-11-01 Developers who want to access USB devices from their embedded systems will find a helpful resource in USB Embedded Hosts: The Developer's Guide. This new book from the author of USB Complete shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications with USB devices.

USB Complete Jan Axelson,2004 This guide takes the pain out of designing for this popular interface with specific, detailed examples that show how to develop USB devices

and the applications that communicate with them. How the USB communicates with the PC, deciding if a project should use a USB interface, choosing a USB controller chip for peripheral design, and determining code with Windows applications are covered in detail.

USB Mass Storage Jan Axelson,2006 This developer's guide for designers and programmers of mass-storage devices that use the Universal Serial Bus (USB) interface provides developers with information on how to choose storage media, interface the media to a microcontroller or other CPU, and write device firmware to access the media and perform USB communications. Comparisons of popular storage-media options to help users choose a media type for a project are included, and the types described cover hard drives and flash-memory cards such as the MultiMediaCard (MMC), Secure Digital (SD) card, and CompactFlash card. Helpful tips on developing an embedded host that can access USB mass-storage devices are also covered.

Build Your Own Sports Car Chris Gibbs,2007-04-01 The all-color practical Build Your Own Sports Car provides all the information needed to build a road-going two-seater, open-top sports car on a budget, using standard tools, basic skills and low-cost materials. The down-to-earth text clearly explains each step along the road to producing a well-engineered, high-performance sports car, providing a learning experience in engineering and design - and opening up a whole new world of fun motoring. The Haynes Roadster, which has fully independent rear suspension, has been designed with the aid of CAD software to develop the chassis and suspension, resulting in a car with performance and handling to challenge many established kit cars and mainstream sports cars. The design is intended to make use of components sourced primarily from a Ford Sierra donor,

4

although alternative donors are mentioned.

Computer Networks Andrzej Kwiecien,Piotr Gaj,Piotr Stera,2014-05-23 This book constitutes the thoroughly refereed proceedings of the 21st International Conference on Computer Networks, CN 2014, held in Brunów, Poland, in June 2014. The 34 revised full papers presented were carefully reviewed and selected for inclusion in the book. The papers in these proceedings cover the following topics: computer networks, tele informatics and communications, new technologies, queueing theory, innovative applications and networked and IT-related aspects of e-business.

Timeless Awakening Robert Twigg,2015-10-30 Stanley Marshal is retiring from his position as a history professor at the University of Washington. The highlight of his retirement is a field expedition to Saqqara, Egypt, where he will manage the excavation of a mastaba, a burial mound that was recently discovered. The trip is planned for September-but, two weeks before Stanley and his assistant, Carlson Kramer, are scheduled to leave for Egypt, the professor receives an early morning call from a representative of the American Research Center in Egypt... ...an organization that has supported Stanley's work over the years. The ARCE representative informs Stanley that he must leave for Egypt immediately and travel to Giza because of an event that has taken place there in the last few days. Although Stanley protests the abrupt change in his plans, he agrees to make the flight the organization has booked for him and his assistant with the condition that travel arrangements are also made for a former student, Janice Totten... ...to whom the professor has become very close. The trip to Giza turns out to be a gathering of the world's best scientists and historians. Under the leadership of Alam Al-Moshara, an important ARCE representative, the scholars are confined to a local hotel for the purpose of

working together to uncover the cause of several electromagnetic disturbances that have occurred just days before the group's arrival. Professor Stanley's knowledge of Egyptian history and the pyramids becomes significant to the Egyptian government and the global community as they discover the source of the devastating disturbance that makes itself visible over the great pyramids, and then expands across the earth. ...What they find may be the end, or is it a Timeless Awakening? Timeless Awakening takes us on an imaginary, technological journey to look at a civilization that has survived for over a million years, and has developed the means to control and manipulate the most fundamental physical laws of our universe, space, time, and gravity.

Innovative Computing Methods and Their Applications to Engineering Problems Nadia Nedjah,Leandro Santos Coelho,Viviana Cocco Mariani,Luiza de Macedo Mourelle,2011-05-25 The design of most modern

engineering systems entails the consideration of a good trade-off between the several targets requirements to be satisfied along the system life such as high reliability, low redundancy and low operational costs. These aspects are often in conflict with one another, hence a compromise solution has to be sought. Innovative computing techniques, such as genetic algorithms, swarm intelligence, differential evolution, multi-objective evolutionary optimization, just to name few, are of great help in founding effective and reliable solution for many engineering problems. Each chapter of this book attempts to using an innovative computing technique to elegantly solve a different engineering problem.

Advances in Distributed Agent-Based Retrieval Tools Vincenzo Pallotta,Alessandro Soro,Eloisa Vargiu,2011-06-30 This volume contains revised and extended versions of papers presented at the 4th edition of the international workshop on Distributed and Agent-based Retrieval Tools (DART'10) held in June 2010, in conjunction with the Symposium on Human Language Technology for the Information Society, in Geneva, Switzerland. Practitioners and researchers working on pervasive and intelligent access to web services and distributed information retrieval met to share their results and insights in intriguing and challenging topics such as: (i) social media and collaboration, (ii) new challenges in search technology, (iii) sentiment analysis and opinion mining, (iv) distributed information retrieval, (v) pervasive intelligence. Every chapter, before discussing in depth the specific topic, presents a comprehensive review of related work and state of the art, in the hope of this volume to be of use in the years to come, to both researchers and students.

Network Defense: Perimeter Defense Mechanisms EC-Council,2010-04-12 The Network Defense Series from

EC-Council | Press is comprised of 5 books designed to educate learners from a vendor-neutral standpoint how to defend the networks they manage. This series covers the fundamental skills in evaluating internal and external threats to network security and design, how to enforce network level security policies, and how to ultimately protect an organization's information. The books in the series cover a broad range of topics from secure network fundamentals, protocols & analysis, standards and policy, hardening infrastructure, to configuring IPS, IDS, firewalls, bastion host and honeypots. Learners completing this series will have a full understanding of defensive measures taken to secure their organization's information, and along with the proper experience these books will prepare readers for the EC-Council Network Security Administrator (E|NSA) certification. An organization is only as strong as its weakest link. The same is true in network security. Mis-configurations, outdated software and technical glitches are often the easiest point of entry for a hacker. This book, the third in the series, is designed to teach the potential security practitioner how to harden the network infrastructure, evaluate hardware and software configurations and introduce log analysis, creating a strong foundation for Network Security Troubleshooting, response, and repair. In this volume, you will learn the fundamental theories of lock picking in addition to proper terminology, the importance of tool design (i.e. how to select and use the right tool for a given job), the effects of tolerances, and finally the techniques most commonly used by locksmiths to successfully pick the vast majority of standard pin and wafer tumbler locks. Lock picking is a useful, engaging, and satisfying skill; with this book and a little determination, you'll be off to a great start.
