*A Collection of Technical Papers*, 1973

*A Primer on QSAR/QSPR Modeling* Kunal Roy, Supratik Kar, Rudra Narayan Das, 2015-04-11 This brief goes back to basics and describes the Quantitative structure-activity/property relationships (QSARs/QSPRs) that represent predictive models derived from the application of statistical tools correlating biological activity (including therapeutic and toxic) and properties of chemicals (drugs/toxicants/environmental pollutants) with descriptors representative of molecular structure and/or properties. It explains how the sub-discipline of Cheminformatics is used for many applications such as risk assessment, toxicity prediction, property prediction and regulatory decisions apart from drug discovery and lead optimization. The authors also present, in basic terms, how QSARs and related chemometric tools are extensively involved in medicinal chemistry, environmental chemistry and agricultural chemistry for ranking of potential compounds and prioritizing experiments. At present, there is no standard or introductory publication available that introduces this important topic to students of chemistry and pharmacy. With this in mind, the authors have carefully compiled this brief in order to provide a thorough and painless introduction to the fundamental concepts of QSAR/QSPR modelling. The brief is aimed at novice readers.

*Brittle Materials in Mechanical Extremes* Giovanni Bruno, 2021-06-18 The goal of the Special Issue "Brittle Materials in Mechanical Extremes" is to spark a discussion of the analogies and the differences between different brittle materials, such as ceramics and concrete. The contributions to the Issue span from construction materials (asphalt and concrete) to structural ceramics to ice. Data reported in the Issue were obtained by advanced microstructural techniques (microscopy, 3D imaging, etc.) and linked to mechanical properties (and their changes as a function of aging, composition, etc.). The description of the mechanical behavior of brittle materials under operational loads, for instance, concrete and ceramics under very high temperatures, offers an unconventional viewpoint on the behavior of such materials. While it is by no means exhaustive, this Special Issue paves the road for the fundamental understanding and further development of materials.

Case Studies in Food Product Development M Earle, R Earle, 2007-12-18 New product development is vital for the future of the food industry. Many books have been written on NPD theory over the last 40 years, but much can still be learnt by studying actual experiences of NPD. Case studies in food product development describes specific NPD projects in a variety of industries internationally and also records overall comments, written by the very people who have completed the projects. Part one outlines new product development in the food industry and part two views product development strategy and management in different companies and organisations. Parts three, four and five are twelve case studies on respectively the product development process, technological development, consumer and market research. Part six considers product development in practice and the final chapter demonstrates how product developers are being educated. The case studies are written by experienced product developers talking openly about experiences with their own products. It is hoped that those faced with similar challenges will gain from these real life experiences. Mary and Dick are also co-authors with Allan Anderson of Food product development, which has achieved international success. Case studies in food product development is a complement and a practical companion to this book. Describes new product development in a variety of international industries Outlines new product development in the food industry and views product management and strategy in different organisations Includes case studies focusing on the product development process, technological development, and consumer and market research
